Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

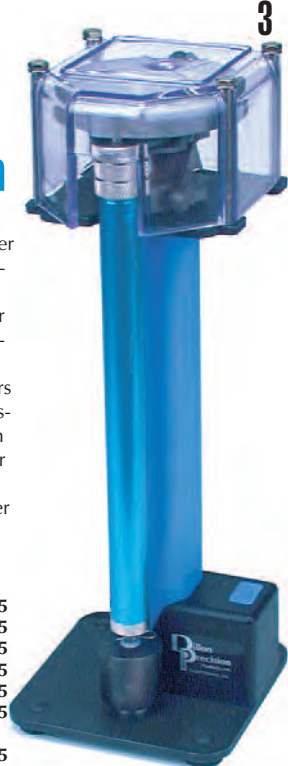

Clear polycarbonate shield and protective housing

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

We READ Our Mail!

I just wanted you to know I really enjoyed the recent article by Dr. Brian Dillon in the July issue of *The Blue Press*. It was extremely well written, entertaining, and informative. I hope we get the pleasure of more articles from him in the future. It's stuff like this that keeps me coming back.

David.G.McKay@comcast.net

You're not alone, David, and as it happens, I just received an e-mail from Dr. Dillon with a proposal for three more articles that I - for one - can't wait to read!

Y our July 2013 *Blue Press* was the best ever with Kaytie on the cover and the great article on the Dillon family's 1911. At age 69, I'm punching about 200 holes in paper per week in 9mm, .38 Special, and .45 ACP, all made on my flawless RL 550B. As a loyal native of Missouri, my 1911 is an Ed Brown; made to perfection and true to John Browning's design. Make your bullets on the best, shoot the best, and shoot your best. Thanks for all you do,

Ron Reinke - Nixa, MO

The Bill of Rights has all the principles that make our country as great as it is. The Second Amendment is the one that is the strongest deterrent to the government taking complete control of the people. I am amazed that so many gun owners have voted the anti-gun Democrats back into office. Everyone I talk to denies that it was them, but the numbers refute that.... *The Blue Press* July issue was one of the best. The "Remington 870," the "Grandpa Dillon" and the "Kel-Tec" articles were most interesting and informative. I have many Dillon products and they are not only the best, but your guarantee is the best in the market.

George A. Traganos

H ello, I just wanted to thank you for fixing the cracked frame I had on my older Square Deal. This morning I've received it back and when I opened the box, it didn't look "fixed," it looked brand new! In this age of cheap products, it's great to deal with a company that backs its products 100 percent. Your No-BS warranty is exactly what you say. Again, Thank You!

Bill Terry - Ashland, KY

The Boberg

Above, the right side of the Boberg XR9-S. Inset, the controls: Trigger, magazine-release button and takedown latch.

By J.B. Wood

When you first look at the right side of this little 9mm pistol, you know it's drastically different.

You'll notice that the ejection port and the rear of the barrel are way further back than on a "normal" gun. Actually, they're over the magazine area. So, how can it feed? Design genius Arne Boberg had a marvelous answer to this.

Here's how it works: The cartridges are inserted into the magazine forward, leaving the rim/case-head exposed at the rear. On the underside of the slide is a lever with "tongs" at the front, to grip the rim and pull the round out rearward, onto a platform on the frame. As the slide reaches full rear travel, it strikes a lug on the platform, pushing the round up to feed into the chamber.

The explanation may sound complicated, but the mechanism is not, and it works, beautifully. The next question is why was it done? The short answer is that it allows the Boberg XR9-S, in sub-compact size, to have a barrel length of 3.35 inches, with a rifled portion of nearly three inches. The reloaders reading this will know why this is important.

All of the other little 9mm pistols have only about two inches of rifled barrel beyond the chamber. So, even extra-power loads don't get up

to full speed. In the Boberg, that extra inch-or-so of barrel, with some loads, can deliver a muzzle velocity of around 1400 foot-seconds with an energy figure of up to 500 foot-pounds.

In cartridge selection, there is one thing to watch out for. Some of the "el cheapo" brands, mostly sold at the big-box stores, have minimal crimping of the bullet at the front. With those, an occasional occurrence is that the "tongs" will simply pull the case off! As long as you stick to high-quality ammo, no problems.

For a locking system, Boberg wisely avoided the classic falling-barrel type, and used a turning-barrel arrangement. This has several advantages. It is more vertically compact, and it is a straight-back movement that tends to give flawless feeding. Also, turn-barrel systems adjust their rotation and opening rate to the cartridge power.

In addition to the rearward feeding, there is one other odd feature of the Boberg magazine. At the top, there is no follower. The upper end of the magazine spring is turned downward with the cartridge resting on the spring. This caused no problems during my test firing. For those who just like to see that little platform at the top, Boberg can supply one for only \$3.95 plus postage.

"All of the other little 9mm pistols have only about two inches of rifled barrel beyond the chamber."

XR9-S Pistol

The DA-Only trigger pull is smooth and easy. It is continuous, not reset, so you can give occasional hard primers another whack. You won't notice it in a straight-through pull, but as the external-hammer gets to full-cock there's a slight hesitation-point that will let you use the sights. Those are square-picture, with three white dots. Dovetail-mounted and secured by Allen screws, they are laterally adjustable.

The safety systems are the DAO trigger and an automatic internal firing pin block. There is no "magazine safety." So, if the mag is out during a critical situation, you can still fire the round in the chamber. A deep frame incurve at upper rear sits the XR9-S nicely in the hand, and the front strap has ample room for two average fingers. The takedown lever can be set at halfway position to hold the slide open.

For trying out the XR9-S at the range, I found that I had only two good 9mm loads on hand: A 147-grain FMJ "Performance Match" load from Cor-Bon, and a 115-grain JHP Plus-P from Black Hills. At

seven yards, with a two-hand hold, all of the five-shot groups were centered well, and averaged 5.5 inches. Excellent performance, and there were no malfunctions. Felt recoil was not unpleasant.

The Boberg is made of the best materials, and the workmanship is outstanding. The slide and other working parts are high-grade stainless steel. The frame is 7075-T6 aluminum, and the grips are Zytel polymer. The company also offers the XR9-L, with a 4.2-inch barrel. At slightly higher prices, other finishes are available. Considering the quality and features, the price of the basic XR9-S shown here is quite reasonable at \$995.

For those who want the numbers, the weight of the XR9-S is 17.4 ounces. Length is 5.1 inches, height 4.2 inches, and width 0.95 of an inch. Barrel, as already noted, is 3.35 inches. The magazine holds seven rounds.

Dillon Range Bag

Dillon's Modular Range Bag features a MOLLE-style fastener system to make it easy to reconfigure the bag to fit your individual needs. The end compartments and side compartments are removable, and extra end compartments are available.

The Range Bag comes with a removable, open-topped Stage Bag, so you can carry your ammo to shoot a stage

without having to take the entire bag. The main compartment is designed to hold the Stage Bag or a Border Shift Ammo Bag (sold separately below), as well as a Dillon Large Utility Box (see Page 36).

BL 550 Dillon's Basic Loader

\$259⁹⁵

K42-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount K42-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550Bs

RL 550 Toolholder with Wrench Set	K42-11541	\$28.95
Cartridge Case Bin/Bracket	K42-11185	\$24.95

RL 550B ACCESSORIES

A. RL 550B CALIBER CONVERSION KITS

Contains: Shellplate, powder funnel and locator buttons. Available in all calibers; please specify caliber desired.

K42-RL550B CON-

VERSION \$45.95 (Exotic calibers, \$55.95)

B. AUTO POWDER MEASURE SYSTEMS

Additional powder measures stay on the toolhead. Never change powder measurements again!

RL 550 Powder Measure **K42-20782, \$76.95 ea.**
Magnum Rifle Powder Bar **K42-21353, \$29.95 each**
X-Small Powder Bar **K42-20780, \$29.95 each**

C. DELUXE QUICK CHANGE ASSEMBLY

With a quick change assembly and a caliber conversion kit (SOLD SEPARATELY), you can convert in less than a minute. Complete with:

- Toolhead
- Powder Measure
- Powder Die
- Toolhead Stand

Price without Dies, **K42-22058, \$103.95**

Loading dies sold separately on Pages 34, 35 & 52.

D. POWDER DIES

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "bellling" adjustment.

K42-20064, \$11.35 each
Three or more, \$10.25 ea.

X-Large Powder Die, **K42-21253, \$19.95 each**

E. TOOLHEADS

Don't adjust dies when switching calibers. These precision tool holders hold your dies in perfect alignment, making caliber changes quick and easy.

K42-13909, \$22.95 each
Three or more, \$20.95 ea.

F. TOOLHEAD STANDS

The ultimate in convenience for keeping your reloading bench clean and uncluttered.

K42-22055, \$20.95 each
Three or more, \$18.95 ea.

G. 1" BENCH WRENCH

K42-10842, \$7.95 each
Two or more, \$7.10 ea.

H. RL 550B CASEFEEDER UPGRADE

Available for most pistol cartridges – will not work with rifle cartridges.

Large Pistol **K42-14450**

Small Pistol **K42-14451**

\$254.95 (110v US Model)

Large Pistol **K42-14453**

Small Pistol **K42-14454**

\$264.95 (220v Euro Model)

CASEFEEDER CALIBER CONVERSIONS (Page 16)

\$23.95 each

K. 550 SPARE PARTS KIT

- 1 Seating Punch, Small
- 1 #10 Tinnerman Insert
- 1 Primer Cup, Large
- 1 Primer Cup, Small
- 1 Bellcrank Cube
- 3/8" Index Ball
- 1 550 Brass Tip Set Screw
- 1 550 Ejector Wire
- 1 Cartridge Retaining Spring
- 1 550 Slide Return Spring
- 4 Locating Pins (#1, #2, #3, #4)
- 1 Seating Punch, Large
- 1 550 Index Ball Spring
- 2 Pickup Tube, Small, Yellow Tips
- 2 Magazine Orifices, Large
- 1 Toolhead Pin

I. PRIMER FLIP TRAY

K42-13606, \$20.95 each

J. PRIMER PICKUP TUBES

- 1 Lg. tube **K42-22029 \$7.99**
- 1 Sm. tube **K42-22028 7.99**
- 2 Sm., 2 Lg. **K42-20056 23.95**
- 4 Lg. tubes **K42-20050 23.95**
- 4 Sm. tubes **K42-20049 23.95**

- 2 Pickup Tube, Large, Green Tips
- 2 Magazine Orifices, Small
- 1 550 Primer Cup Spring
- 2 Retaining Clips
- 2 Dispensing Tip, Large
- 2 Dispensing Tip, Small
- 1 Failsafe Bushing Rev. B

K42-20048, \$18.95

L. MACHINE MAINTENANCE KIT

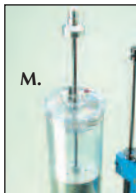

Provides you with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available in combination with a spare parts kit for your machine.

Maint. Kit & RL 550B Spare Parts Kit **K42-97016, \$32.95**

M. LOW POWDER SENSOR

Provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1000 grains, a buzzer will sound and a bright red LED will light.

K42-16306, \$41.95

N. EQUIPMENT DUST COVERS

This packcloth nylon machine cover comes equipped with a D-ring, allowing the heavy duty zipper to be locked.

RL 550B Cover, **K42-13795, \$23.95**

(O.) Master lock, **K42-13083, \$3.95**

Quick-Change Cover (for use with powder measure) **K42-11143, \$14.95**

P. UNIVERSAL MOUNTING HARDWARE KIT

Includes: 4-Grade 5 Hex Bolts, 4-Lock Nuts, 4 Flat Washers, 4-Fender Washers, 2-Wood Screws.

Dillon's Rapid Trim 1200B Case Trimmer

Makes short work out of trimming large quantities of rifle brass

Dillon's RT 1200B shown installed on an AT 500.

The RT 1200B is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, a 1/4 horsepower electric motor driving a carbide cutter is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1200B is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1200B trimmer motor **K42-22080** is **\$254.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately. (Please see chart below). Replacement carbide cutting blades, **K42-13141**, are **\$19.95** each. Upper lock rings, **K42-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes complete with large and small swage rods.

K42-20095
\$100.95

Dillon's Case Preparation Equipment

CV-2001
K42-20493
\$187.95

CV-750 K42-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator K42-20675 \$72.95

CM-500 Case/Media Separator K42-21045 \$46.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 K42-22047 \$212.95

Euro CV-750 K42-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **K42-13804** **\$8.95**
Case (20 pc.) **K42-20255** **135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lube, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **K42-13733** **\$8.95**
Case (20 pc.) **K42-20256** **135.95**

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) **K42-21375** **\$135.95**

Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.
15-pound bag **K42-13287** **\$23.95**

Ground corn cob polishing media – the best there is for that final polish.
10-pound bag **K42-13496** **\$15.95**

20 “This is My Rifle...” The Ruger

The author engaging a target with his Ruger Gunsite Scout Rifle on “The Scrambler.”

By Mark Pixler, Photos by Ken Jorgensen

I was inching my way along the trail, trying hard to control my breathing, but without much success. My adrenaline was at high tide. I'd already shot several of them, but there were more out there – I just didn't know how many or where. Suddenly, my eyes picked up a shape as I was scanning through the trees. I dropped down to one knee, leaned into my sling and focused on the reticle.

“Hit!”

Sucking in air as I ran the bolt, I focused on the reticle again.

“Hit!”

I slowly rose back to my feet, peering over the scope, scanning left and right as I did. Then, moving forward, I saw the elephant.

“Can I shoot the elephant?” I asked Gary Smith, my instructor.

“Don't shoot the elephant,” he answered.

I'd just completed what amounts to the “mid-term exam” of Gunsite's Scout Rifle Course, an exercise called the “Vlei,” an Afrikaans word derived from the Dutch “vallei” (valley). The targets were head-and-torso-sized steel plates judiciously placed on the hillsides along a trail, and the scenario was an African elephant hunt plagued by several “armed and dangerous” poachers who were after the same elephant.

On the way back up the trail, Gary showed me the one “poacher” I'd missed seeing altogether. The one who would have probably shot me in the back had it been the real thing. It was a sobering moment.

For all who are familiar with the Scout Rifle concept and where it came from, it's only fitting that Ruger would go to Gunsite in order to develop its own version: The Ruger Gunsite Scout. VERY shortly after Ruger introduced the rifle, I ordered one. I've always been a believer in Colonel Jeff Cooper's concept for a general-purpose rifle, and had followed its development from the beginning. I'd longed for either a custom-built version or one of the rifles offered by Steyr, but neither fit into my budgetary limitations.

As it turns out, I'm glad I “waited” for the Ruger Gunsite Scout. When Ken Jorgensen of Ruger called me asking if I'd be interested in accompanying him to attend the third Scout Rifle class at Gunsite, I leapt at the chance. I'd never had the opportunity to take a class at Gunsite, and I knew from everything I'd heard that I was missing out.

The Scout Rifle curriculum is based on that of Gunsite's 270 General Rifle class, but adapted to focus on the Ruger Gunsite Scout Rifle and its capabilities. Gunsite Rangemaster II Ling New explains, “We try to make the Scout class a bit different from the 270 class, really emphasizing the Scout's versatility. For example, it has the ability to work close with a low-magnification scope, so we have students address randomly turning targets offhand. To demonstrate its longer-range capability, we have them engage targets out to 400 yards. We also include exercises that show our Scout Rifle students how to take advantage of its ‘handiness’ in being shorter, lighter and – when outfitted with the lower-power scopes – quicker than other bolt guns.”

The class was first offered to gunwriters shortly after the rifle was introduced in order to familiarize writers with Colonel Cooper's Scout Rifle concept and to demonstrate the effectiveness of Ruger's rifle. According to Ken, who had attended both previous classes, the third class had evolved somewhat and was the best one so far. I concur.

The high quality of the instruction was a direct result of the high quality of the instructors themselves: Il Ling was our Rangemaster (or “mistress” she would remind us as she imitated the motion and sound of a whip cracking from time to time during the class) assisted by Coaches Mario Marchman and Gary Smith.

My first experience with formal rifle instruction was during U.S. Coast Guard basic training in 1976, and since then I've participated in service rifle competition (which was the impetus for purchasing my first RL 550B, long before I started working at Dillon) so I was familiar with rifle-shooting positions and the use of a sling. But the Gunsite course was much more than a refresher!

Gunsite Scout Rifle, as Taught at Gunsite! ²¹

What I remember of boot camp is mostly the yelling – fortunately there was none of that at Gunsite. Of course, safety was the first priority and the four Gunsite Firearms Safety Rules were immediately stated and prominently displayed EVERYWHERE:

1. All guns are *always* loaded.
2. Never let the muzzle cover anything which you are not willing to destroy.
3. Keep your finger *OFF* the trigger until your sights are on the target.
4. Always be sure of your target.

One of the first things I noticed about Gunsite was that when you're in the restroom – regardless of which direction you're facing in order to attend to the job at hand – the Gunsite Firearms Safety Rules are displayed at eye level, lest you forget. Just as it was during basic training, my mantra for the entire five-day course was: *Don't screw up... Don't screw up... Don't screw up... Don't screw up...* Of course, I screwed up. But not when it came to the Gunsite Firearms Safety Rules.

Day One

Monday started out in the classroom where we received – you guessed it – an introduction to the safety rules, and the range commands the instructors would be using at the range. When we went to the Shot Quad Range, the instructors showed us the carry methods we would be using during the class. Since “a slung rifle is a safe rifle,” we were introduced to “American Carry,” in which the rifle is slung muzzle up on the strong-side shoulder; “African Carry,” in which the rifle is slung muzzle down on the support-side shoulder; and “European Carry,” in which the rifle is slung muzzle up in front of the support-side shoulder and steadied with the support hand. We were taught how to quickly shoulder the rifle from each position and engage targets in an efficient manner.

Day Two

Tuesday we refined our zeros at 100 yards on the York Range, shooting in the Prone position. Then we moved to 75 and 50 yards learning to shoot in Sitting and Braced Kneeling positions respectively. Another position we experimented with was the Military Squat or “Rice Paddy Prone.” I found that my “physique” doesn't lend itself well to rice paddy prone, so I only shot one round of targets using it, and fortunately Mario positioned himself behind me to keep me from landing on my butt. Il King and I joked about marketing a “Tactical Butt Pod” or “Ballistic Bustle” for guys like me in order to assume the Military Squat without the risk of ungracefully landing on one's posterior.

Day Three

Wednesday began with zeroing the rifles at 200 yards on the Woodfill Range, after which we worked with more position shooting at various ranges. All the while we received instruction on malfunction drills, tactical reloads, shooting at turning targets and tactical movement (*big step, little step; big step, little step; big step, little step...*).

Day Four

Thursday we started a bit later because that evening we would break early and return to the range at sunset for low-light training. Meanwhile, though, we moved to the 300-yard position at the Woodfill Range to check our zeros. From there, we moved to 200 yards and practiced more position shooting. As that continued, Mario and Gary took students in groups of three to run the Vlei, where everything we had learned so far was put to the test in a near-real-world simulation. As I said in the beginning of this article, it also gave your adrenaline glands a workout.

That evening, we shot targets both by moonlight and assisted with tactical lights. The moon-

Dillon Leather b

When we lost our supplier for Dillon Leather, we considered abandoning the gunleather business. Fortunately, we were able to team up with Mitch Rosen Extraordinary Gunleather to continue to offer a best-quality, made-in-the-USA line of belts and holsters. We know you'll like these products — we're happy to have our name on them.

Stylemaster-DL \$150

A superior shoulder rig made of best-quality leather with solid brass fittings — no cheap plastic, no soft suede or other low-quality leather.

The Safepacker

THE WILDERNESS' SAFEPACKER™ HOLSTER is the ONLY mode of concealed carry that I have personally witnessed save a man's life. It's a long story, but suffice it to say that the element of surprise afforded by the Safepacker did the trick. The folks at The Wilderness contend that the Safepacker™ is the best, most versatile and utilitarian holster in the world. I tend to agree, because the one you see pictured at left...is mine.

Mark Pixler, editor

The Safepacker can be hand carried like a day planner, equipped with a shoulder strap (not included), slipped into an attaché case, opened with the top flap stuffed between the mattress and box springs on your bed, strapped to a seatbelt, attached to a sun visor, clipped to a backpack, or worn on your hip as a very low-profile "un-holster."

- "Government Model" Safepacker, RH **K42-11703 \$89.95**
"Government Model" Fits: Colt Government Model, GLOCK 17/18/20/21/22, SIG P-220/226, Beretta 92/96, HK USP-45, 4" K-Frame, 3" N-Frame, etc.
- "Commander" Safepacker, RH **K42-11702 89.95**
"Commander" Fits: Colt Commander, SIG P-245/229, HK USP-45 Compact, Tokarev, etc.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. *Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.*

Uncle Mike's Kydex Holsters

Michaels of Oregon's injection-molded Kydex holsters have a level of detailing, quality and affordability unmatched by other manufacturing methods. The almost-vertical rake allows for behind-the-hip carry, and for some applications, the holster can function as a crossdraw. Smaller-size holsters can also be used for "appendix" carry. To aid concealment and to assist in the draw, the holster rides close to the body at a mid-level height. The injection-molded belt loop is designed to accept and support a variety of belts from 1" to 1.75" wide.

The key to the successful gunfighters of the Old West was not so much the weapon of choice, but rather the holster. How quickly the weapon could be retrieved, aimed and fired was the difference between survival and becoming a statistic. The Close & Ready Holster Caddy provides a faster and safer way to protect your family. It works with most existing holsters and slides easily between the mattress and box springs on either side of your bed.

"Wild Bunch" 1911 Holster & Mag Pouch

This holster/mag pouch was designed in a joint effort by World Cowboy Action Shooting Champion Gene "Evil Roy" Pearcey and World Fast Draw Champion Bob Mernickle when SASS introduced the "Wild Bunch" category for Cowboy Action Shooting.

When these two champions put their heads together, they created a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame

away from your body so you'll get a full combat grip, and the holster includes the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

Includes: 4-Grade 5 Hex Bolts, 4-Lock Nuts, 4 Flat Washers, 4-Fender Washers, 2-Wood Screws.

K42-14355, \$5.49

'Belted Magnum' Powder System

Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. Our "Belted Magnum" Powder System features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder.

Like all of Dillon's powder measures, the Belted Magnum Powder System is case-activated and can be used with your RL 550B, XL 650 or AT 500 reloader. It's ideal for loading large-caliber magnum rifle cartridges. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

The "Belted Magnum" Powder System is based on our SL 900 Shot Dispenser, so the Maximum Charge Bar won't work in our standard powder measures – you'll need to buy the entire system. The good news is that the "Belted Magnum" Powder System has an integral drain, so it's easy to empty the hopper in order to change powder types; so, if you load several big calibers with various powders, it's easy to switch from one to another.

Keep plenty of extra powder on hand, because when you're dispensing 100-plus grains into every cartridge, you're gonna need it! Magnum Powder System **K42-97126 \$137.95**

Forster Products Datum Dial Ammunition Measurement System

Forster Products' easy to use Ammo Measurement System gives you the data you need to refine your case-sizing and bullet-seating operations. For example, using the average relative measurement taken from several cases that have been fire-formed from the same firearm, you can then adjust your sizing die to produce cartridges with a headspace tailored to your firearm's chamber. This complete kit includes one Datum Dial tool for checking cartridge cases, both bullet/cartridge dials for use with .17, .204, .224, .243, .257, .264, .277, .284, .308, and .338 caliber bullets, a laminated chart showing common datum diameters, complete instructions and storage box. (A caliper is required.)

K42-18960 \$157.00

Evolution Gun Works Chamber Checkers

Speed up the round-checking process when you're getting ready for a match! EGW uses actual Clymer chamber reamers to produce its chamber checkers.

Attain Peak Accuracy With Hornady's L-N-L O.A.L. Gauge, Bullet Comparator

Overall Length Gauge

The initial distance a bullet must travel when fired (from the cartridge case mouth until it engages the rifling) is absolutely critical to achieving peak accuracy. A free run of .010 to .060 is commonly employed for accurate target, varmint and hunting loads. Consequently, knowing and being able to alter the dimensions, as needed, is vitally important to precision shooters and handloaders.

.300 Win. Mag.	K42-14655	6.99

Bullet Comparator

Correct bullet seating depth is critical to accuracy. In addition, minor variations in bullet seating depth will have an effect on both pressure and velocity. The L-N-L Bullet Comparator provides precision handloading dimensions.

light was bright enough that it probably wasn't ideal for low-light work, but we got the idea. That was my first shot at low-light work with a rifle and it was...well...enlightening.

Day Five

Friday came really quickly! We started at the 400-yard tower at the Woodfill Range, engaging Pepper Poppers two shooters at a time. As that was going on, Mario took us in groups of three to run the "Scrambler." Like the Vlei, the Scrambler is a near-real-world simulator that tests the rifleman's ability to engage targets at various ranges. Unlike the Vlei, you get a "walk-through" that lets you know what and where the targets are, which is especially helpful since the Scrambler is a timed exercise. Running the Scrambler was fun, and lots of it. Ken said he'd like to have a Scrambler on his property so that he could run it every day before breakfast as his "morning workout."

After the Scrambler, we moved back to the Shot Quad Range where Gary had set up a moving-target course and was running shooters through it two at a time. At that, and at "shooting while moving" the day before, I learned that I need LOTS of work. Cursed with the inability to walk and chew gum at the same time, the curse translates to an inability to "walk and shoot" and "shoot at things that are walking" as well. Maybe (just maybe) if there were a five-day course focusing on that alone, my performance would improve. Suffice it to say that was my greatest weakness.

The "final exam" was a test similar to one professional hunters in Zimbabwe must pass before they're given a license. It consisted of taking your

favorite intermediate position (sitting or kneeling), engaging three targets at 50, 70 and 90 yards, then doing a speedload and engaging a Pepper Popper from the standing position at 100 yards against the clock. I did it in 37 seconds with one miss on the 90-yard target. In our class, the best time was 36.8 seconds with no misses by Jesse Hall of Grapevine, Texas. Great shooting, Jesse!

Over the five days, Il Ling, Mario and Gary managed to impart a HUGE amount of material to the 11 of us in the class, and did it in a manner that made it FUN. I have no memory of EVER thinking that boot camp was fun. I'll be forever grateful to Ken Jorgensen and the folks at Ruger for giving me the opportunity to attend the class, the folks at Hornady for providing the .308 Winchester 168-grain A-MAX® Match Ammunition that my rifle liked so much (not a cheap date, my rifle) and everyone at Gunsite for making the class such a wonderful experience.

In addition to a much deeper appreciation of the Ruger Gunsite Scout Rifle's capabilities, I came away from the class knowing WHICH gun – if, God forbid, it should ever come to that – they will have to pry from my cold, dead fingers.

Dillon's Pistol Die Sets

Size Die

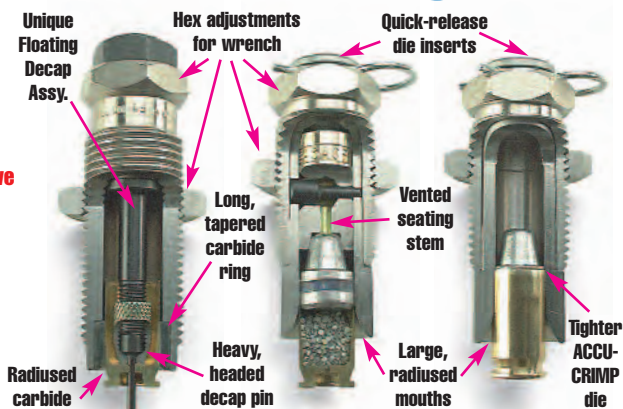

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Dillon Rifle Dies (Three-Die Sets)

.223 Remington	K42-10839	\$66.95

Extra Loading Data Labels, K42-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use.

Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

California Competition Works

12 Gauge Tactical Strippers, Magazine Storage Sleeves

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow you quick access to your shotgun reloads or specialty ammunition. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells such as Eley and Sellier & Bellot. All are equipped with a stainless-steel belt clip that will accommodate up to a 2-1/4" duty belt.

TACCOM, LLC Tactical and Competition Accessories

QUICK CADDY... light, easy, simple! Made from Delrin, TACCOM's Quick Caddy holds the shot shell by the rim only, allowing for easy access to the shells for simple and fast removal. Holds four 12 gauge shells, any length! Comes with a belt strap to attach to your belt, but allows you to use the Tek-Lok™ or ELS systems and is adaptable to MOLLE system as well.

K42-19537 **\$24.95**

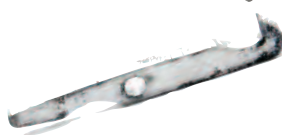

TACCOM, LLC's Dualload Shot Shell Holder is available in 2-, 4-, or 6-Shell versions and can be customized to carry your shotgun ammo in several configurations. We're offering the 2Up version that can be either attached to a belt or MOLLE gear, as well as the 4Up and 6Up versions with a BLADETECH Tek-Lok™ Universal Belt Clip (included) that can be attached at various angles. The Dualload allows you to grab two shotshells aligned in such a manner that it makes it easy to load two at a time into your shotgun. It's quick, easy and (most important) intuitive!

2Up Belt/MOLLE	K42-19530	\$9.95
4Up w/Tek-Lok	K42-19531	29.95
6Up w/Tek-Lok	K42-19532	34.95

TACCOM's Enhanced Firing Pin for Ciener/CMMG .22 Long Rifle AR-15 caliber conversions will ignite your .22 rounds, whether you use a GI trigger or a three-pound match trigger. This direct-replacement firing pin is made from 17-4 SS heat treated to a condition H900, to present a tough, hard firing pin that won't break or mushroom out after many, many firings. The tip has been designed to stick out of the hole only .030", so you will not damage your barrel by dry firing your weapon.

K42-19538 **\$13.95**

The TACCOM Extreme Extractor is a drop-in part for your Ciener/CMMG .22 Long Rifle insert that will give you the reliability of consistent extraction during live fire. Consistent extraction is KEY for a reliable firearm. This extractor will help with your live round extraction, depending on how well the factory has cut the chamber, and the type of chamber cut.

K42-19539 **\$10.95**

Does your .22 Long Rifle insert move back and forth in your AR upper? The Pressure Plug will apply a constant pressure on your insert, always keeping it in the most forward position when the rifle is in battery. You can install and remove the pressure plug in seconds with no tools.

CLASSIC FIREARMS: The “MAC-

By John Marshall

These visually intimidating firearms were once almost as iconic as Thompson submachine guns, but today they are long out of general circulation and almost forgotten. Still, they represent an important chapter in the history of compact rapid-fire weaponry. The story of how they came to be and how they faded from the scene is an interesting one.

Gordon B. Ingram, then with Police Ordnance Corporation, had developed a .45 ACP subgun in the 1960s, the Ingram Model 6. It resembled the Thompson SMG, but was much cheaper to manufacture. In 1964 he left POC and started to develop a compact new design on his own. Prototypes were made in 1965, and the U.S. Army purchased at least one for evaluation in 1966. About that

time, Mitch WerBell III had developed some effective firearms sound suppressors at his own firm, Sionics (Studies in the Operational

Negation of Insurgents and Counter-Subversion). WerBell was a well-known, eccentric and flamboyantly mustachioed soldier of fortune who was a former OSS and CIA operative. In 1969, Ingram joined Sionics in Powder Springs, Georgia as chief engineer. The company name was changed to the more appropriate Military Armament Corporation (MAC) and it began to make and sell Ingram's new subgun and WerBell's suppressor. In 1970 a group of investors, the Quantum Corporation, took over the financially strapped company. WerBell remained president, and Ingram the chief engineer. However, following a company move to Marietta, Georgia, the new owners quickly forced both men out of the company.

What Ingram had developed for MAC was a submachine gun a bit larger than a normal pistol that would be fairly concealable, simple, cheap to manufacture, reliable, and easy to adapt to suppressors. These guns and suppressors were marketed as a package to the military, law enforcement, and qualified individuals. This first submachine gun, chambered for .45 ACP, was officially designated as the Model 10, but it has since been commonly referred to as the “MAC-

10.” Before their abrupt ouster from MAC, Ingram and WerBell unsuccessfully sought to have it adopted by the U.S. military for general use in the ongoing Vietnam War.

The M10's upper and lower frames were formed sheet steel stampings, which could be economical to produce in almost any serious metal shop. It had a distinctive rectangular form. Inside the upper frame a heavy steel blowback bolt reciprocated. This bolt's forward section telescoped over the rear of the 5-3/4" barrel. The weapon fired from an open bolt with a fixed firing pin, and was very reliable in operation. The subgun illustrated is a legally registered Powder Springs example in the collection of a friend. It was made in 1973.

Surplus M3 “Grease Gun” submachine gun 30-

“The M10's upper and lower frames were formed sheet steel stampings, which could be economical to produce in almost any serious metal shop.

round magazines were slightly modified to fit, and were inserted through the centrally located grip frame. Shortened 10-round magazines were also available for concealment. A rotary selector switch on the left side of the lower frame in front of the trigger allowed either semiautomatic or full-automatic fire, and a sliding safety was located just forward of the trigger on the right side. The cocking knob was on top, and could be accessed by either hand. It had a slot through which the gun could be aimed. Twisting it 90 degrees in the rearmost position locked it in place, making the weapon “drop safe.” The front and rear sights were fixed. A large ejection port was on the right side of the upper frame. A removable, fully collapsible wire stock was provided.

The barrel in front of the frame was threaded to accept a Sionics suppressor. The suppressor utilized a rear expansion chamber loaded with metal shoelace eyelets and a number of polymer “wipes”

10” Submachine Guns & Pistols

in the front section's spiral interior. These were like miniature doughnuts, with central holes smaller than bullet diameter. The wipes expanded as the bullet passed through, and then contracted to partially seal the propelling gases. The downside of the wipes was that they tended to deteriorate with use, and had to be replaced frequently. A Nomex exterior heat shield was available to prevent burns to the shooter's hand.

The .45 M10 subgun was used in limited quantities by a number of Special Forces, including Navy SEALs, in Vietnam. M10s in 9mm and M11s in .380 ACP were also manufactured at MAC. Some sales were made to Chile and Argentina, and then to some Asian and South American countries. However the company continued to be underfunded, and was in no position to provide arms in quantity. Restrictions were also placed by the U.S.

Another MAC was formed in Stephenville, Texas, by James Leatherwood. The re-designed subguns made there had a poor quality reputation. In 1983, Wayne Daniels, a former principal at RPB, started his own company as SWD Incorporated. This company began to produce open-bolt subguns with some frames purchased from the newly formed "Texas MAC" and also used many frames and parts from RPB. A series of "Cobray" closed-bolt semiauto pistols were made. Zytel polymer magazines proved unreliable. Following numerous disagreements with the BATF and a lawsuit over suppressor-parts sales, a defiant SWD folded up shop.

Jersey Arms was another manufacturer, and produced subguns based on the same general designs as used by RPB. The manufacturing was actually carried out by Hatton Industries, located in Indian Mills, New Jersey.

Suppressors using wipes were made obsolete when the BATF declared the replaceable wipes and

upper and lower frames were formed sheet
which could be economical to produce in almost
a shop. It had a distinctive rectangular form."

government on the export of suppressors, limiting MAC's overseas markets severely. In spite of wonderful publicity when John Wayne, starring as a policeman in the movie "McQ" used an M11, MAC finally stopped production in 1973. It went belly up in 1976 primarily due to lack of military contracts, and its assets were sold in 1977.

RPB Industries, of Atlanta, Georgia then took over production of the M10 and M11 subguns, and also made M10 and M11 open-bolt semiautomatic pistols as well as carbines with the approval of the Bureau of Alcohol, Tobacco and Firearms. This agency later made a judgment that these open-bolt semiautos were too easy to convert to full automatic. A court order exempted all open-bolt pistols and carbines made or assembled before June 21, 1982 as being legal, but future similarly-made pistols would be BATF-declared as machine guns, subject to registration and a \$200 tax. RPB closed shop in 1982 following the BATF reclassification.

other components themselves as individual suppressors, with each subject to registration and a \$200 tax. Understandably, this made the Sionics-type "cans" not very desirable. Straight one-piece wipeless suppressors were then developed and substituted.

Gordon Ingram passed away in 2004 at the age of 79. Suffering from cancer, Mitch WerBell died of mysterious circumstances involving his possible poisoning in 1983, aged 65.

Closed-bolt semiautomatic MAC-style pistols are still being made by various manufacturers, but the old subguns and open-bolt pistols and carbines can no longer be manufactured. Collectors prize the legal open-bolt semiauto guns, and their prices have escalated substantially. The M10 and its cousins were bold departures from previous designs, but were of limited utility. Today, they are very interesting collectibles that represent a now-classic and significant design concept.

Cavalry Arms Medical Trauma Kits

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics.

The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll.

The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.

*FAQ About Berry's Preferred Plated Bullets

1. What is "DS?"

"Double Struck." Double-Struck bullets go through an extra sizing process after being plated. This makes the bullet 100 percent symmetrical. This can give you an edge in competition, but most shooters won't notice the difference.

2. What is the difference between Plated/Jacketed/Cast bullets?

Berry's Preferred Plated bullets begin as a swaged lead core. The plating process works through electrolysis. The swaged lead cores are tumbled in an electrically charged cyanide bath containing high-grade copper ingots. The copper clings to the lead and the longer the bullets remain in the bath, the thicker the plating.

3. How do I load Berry's Preferred Plated Bullets?

Plated bullets occupy a position between cast bullets and jacketed bullets. They are soft lead, but have a hard outer shell on them. When loading plated bullets we have found best results using low- to mid-range jacketed data in the load manual. You must use data for a bullet that has the same weight and profile as the one you are loading. Do not exceed mid-range loads.

4. How fast can I shoot these bullets?

Velocities depend on the caliber, but as a rule of thumb, we recommend you don't shoot our plated bullets over 1200 fps (feet-per-second). Our 44s actually shoot best around 1150 fps. 45s are generally good at 850-900 fps. Our bullets are NOT recommended for magnum velocities.

5. Can I shoot your plated bullets in my GLOCK?

Yes. We have a large contingent of loyal GLOCK shooters using our bullets. The plating is thick enough that you will not get lead fouling in your bore, which is the nemesis of polygonal barrels.

*DS = Double Struck, TP = Thick Plate, HB = Hollow Base, RN = Round Nose, FP = Flat Point, SWC = Semi Wadcutter, WC = Wadcutter

About SNS Casting: SNS Casting, Inc. is a family owned and operated business located in rural Flanagan, Illinois and was officially founded by Jim Stinar in the winter of 2008. Jim's casting history actually began in the mid 1980s as a hobby. This supplied not only himself but a group of friends and fellow avid shooters who were tired of paying too much for inferior products. Eventually, word was spreading throughout the surrounding states of his bullets, which were priced right for the quality.

Today, SNS Casting features four of Magma Engineering's Mark VIII casters and two Lube Master luber/sizers fitted with M-A Systems Collators. **Our lead is a certified factory alloy of 92 percent lead, 6 percent antimony and 2 percent tin, which is purchased in 44,000-pound lots to ensure consistent quality. The lube we use is Magma blue lube.**

We have two full-time employees at SNS Casting. Jim Stinar and son Ryan are avid USPSA (A30909, A63666) shooters, SASS members and NRA members.

NOTICE: There is a \$20.00 minimum 'Hazardous Material' (HazMat) handling fee for shipping PRIMERS. This fee is assessed in increments of 10,000 primers. Primer orders MUST be shipped separate from other items, and require a separate shipping and handling charge. Shipping and HazMat fees are not included in prices.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

K42-21894 \$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

K42-19972 \$39.95

Stainless Steel Dial Caliper

- .100 per revolution.
- Covered track for longer caliper life – keeps chips out!
- Made of hardened stainless steel.

High Tech Digital Caliper

**Accurate,
Easy to Read!**

K42-17171 \$39.95

The Otis Technology, Inc. **Breach-to-Muzzle Cleaning System** cleans rifles .22 to .50

cal., shotguns .410 bore to 10 gauge and pistols .22 to .45 cal.

The system includes three memory-flex rods, three forged brass tips, two obstruction removers, a T-handle, 0.5 ounce solvent, all-caliber patches, a shotgun brush adapter, two patch savers, five bore brushes, a bore reflector and a cleaning guide. Lifetime warranty!

K42-18174 \$39.95

Bore-tips™ Bore Cleaning Foam Swabs

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!"

The Bore-tips Swabs REALLY DO work. What you can't see under the foam is a plastic jig sized for a tight bore fit

which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reuseable.

Concealed Carry Tote⁴⁷

\$45⁰⁰

K42-18193

Dillon's Concealed Carry Tote accommodates all the tools you need to survive the urban jungle!

This low-profile carry case looks like a mild-mannered-computer-nerd accessory, but it's designed for your pistol as well as your PC! Made of rugged nylon fabric, with heavy-duty zippers on all three main compartments – one designed to hold a laptop computer, one for folders and paperwork, and one in the middle for a handgun.

Inside the case are pockets and pouches that will hold spare magazines as well as folding knives, letter openers, flashlights, cell phones, full-sized 8.5"x11" paper note pads, etc. Measures 13.5" x 11.5" x 6.5" deep.

'Plan B' Day Planner

Dillon's "Plan B" Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

"Plan B" Day Planner

BFR Accessories

A. 50 BMG CASE TRIMMER ASSEMBLY

Features an industry standard 1-1/2"-12 UNF threaded body, a 1/4 HP motor, replaceable carbide cutter, quick-disconnect cord and includes the .50 BMG trim die.

K42-50050, \$374.95

B. 50 BMG CARBIDE SIZE DIE

The only .50 BMG size die in the industry that's a full-length solid carbide size die, for increased die life and scratch resistance. It also has a solid carbide expander ball, placed in the middle of the power stroke for easier operation. The die body is standard 1-1/2"-12 UNF thread, and is manufactured to low chamber tolerance specifications.

K42-50075, \$849.95

C. 50 BMG POWDER MEASURE ADAPTER

For use with the RCBS .50 BMG powder measure.

K42-50125, \$74.95

D. 50 BMG PRIMER SEATING DIE

One of these is included with Dillon's Big Fifty Reloader, but may be used as an accessory on a separate toolhead. The primer seating die is adjustable for enhanced control of primer seating. Includes two primer punches: one flat, match-style primer punch and one cupped, milspec primer punch.

K42-50200, \$149.95

E. 50 BMG PRIMER POCKET SWAGER

Makes it easy to remove the military crimp.

RCBS EQUIPMENT

Dillon's New Bench Wrench Fits new 1" die lock rings

Trim Pro™ Case Trimmer Kit K42-15021 \$119.95

Includes: RCBS Trim Pro manual case trimmer, plus an assortment of shell holders and pilots for most popular calibers. Shell holders 2, 3, 4 and 10. Pilot calibers: 22, 24, 25, 27, 28, 30, 35, 44 and 45.

RCBS Scale Check Weights

Standard Set: 60.5 grains for powder charges.	K42-12297	\$34.95
Deluxe Set: 510.5 grains for bullets, cases and powder.	K42-12458	\$49.95

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Apex Tactical Specialties Armorer's Block

Apex Tactical Specialties' Armorer's Block is designed for S&W Semi Auto M&P Pistols in all calibers, sizes and configurations, including thumb-safety models and the M&P Shield; also for GLOCK® semiauto pistols in all sizes and calibers. The Armorer's Block supports a pistol for armory work and detail disassembly. Its pre-positioned bosses, slots and holes remove pressure from critical function surfaces while pins are driven in and out. High-density polymer construction prevents marring of the frame while driving pins in and out. Made in USA.

Armorer's Block **K42-19536 \$29.95**

AP Custom USA Shotshell Carriers

AP Custom USA's Shotshell Carriers are 100-percent machined from solid billet aluminum, and utilize proven 303 Hi-Yield Stainless steel leaf springs to contain either three or four 2-3/4" 12 Gauge shells in their slots, depending on model. Both models offered here feature the BLADETECH Tek-Lok™ Universal Belt Clip. The 4x4 Shotshell Carrier holds four 2-3/4" 12 Ga. shells in two adjacent slots. The 4x4 is designed for loading four shells at once, either strong or weak-handed. The 3x3 holds three 2-3/4" 12 Ga. shells in two adjacent slots.

Ghost 3.5 Trigger Stop Connector

A. The Ghost 3.5 Trigger Stop Connector shortens trigger movement, eliminates over-travel and provides the fastest trigger reset. Can be fitted to all GLOCK pistols.

3.5 Trigger Stop **K42-14760 \$24.95**

Ghost Bullet and Forward Slide Release

The Ghost Bullet Slide Release was designed with a wider, longer thumb tab that is unobtrusive and sits closer to the frame when not in use. The Forward version addresses the issues of shooters who use the "modern technique" (with thumbs high and pointing towards the muzzle) by placing the thumb tab forward so that it sits between the thumbs, eliminating the problems shooters experience with the modern technique. It also places the thumb tab within easy reach of the forefinger of left-handed shooters.

B. Bullet Slide Release **K42-18630 \$14.95**

C. Bullet Forward Slide Release **K42-18629 19.95**

A SOUND SOLUTION

Lyman Turbo® Sonic 6000 Ultrasonic Cleaner

Reviewed by Peter Carolin

Back in the 19th century, Prussian Field Marshal Helmuth von Moltke chose his top commanders on the basis of their being both smart and lazy: they had the intelligence to get the right outcome, but at the same time, they would always look for the easiest way to accomplish the mission.

For as many years as I've been shooting, I've looked for an easy solution to the annoying chore of cleaning my guns. Hiring a personal servant was out of the question, and my wife has declined the task, in terms that would do credit to a Marine drill sergeant. My suggestion about putting guns in the dishwasher was also vetoed. So, I went through many bottles of Hoppe's No. 9, patches, Q-tips and a variety of purported miracle solvents. And I must admit, procrastination and outright neglect was often the result. Until now.

I was wandering through the exhibits at the 2013 SHOT Show, when I stopped at Lyman's booth. They had a new device on display that, I thought, could be a game changer. It was about the size of a large toaster oven, and it was entitled the Lyman Turbo® Sonic 6000 Ultrasonic Cleaner. I had seen ultrasound cleaners before, but this one was being positioned as having enough capacity for several full-size pistols or revolvers. I was definitely interested.

Many years before, back in the 1960s, I had visited a rural shop in Massachusetts, a barn, actually, where a fellow had a home business, putting souped-up Porsche engines into VW Beetles. His day job was as an engineer at some high-tech outfit on Route 128. His company had developed one of the earliest ultrasound cleaners, and he'd built one for his moonlight business. He was quite proud of his new toy, and demonstrated it by taking the filthiest dual Weber carburetor I'd ever seen and placed it in the ultrasound tank. We went into his house for a beer, and returned to the barn a while later. He took the carburetor out of the tank, and it was immaculate, inside and out. Very impressive, but it took a long time before these gadgets hit the consumer market.

Anyway, I was interested enough in Lyman's new ultrasound cleaner to request a sample for review. It arrived, followed by a generous supply of concentrated cleaning solution for guns and gun parts. The unit has a 6.3-quart tank, with

12.8" x 8" x 3.9" internal dimensions. It will hold up to three 1911 frames or the equivalent.

Along with the ultrasonic cleaner, Lyman provides a very thorough operating manual. They also have some very good step-by-step instructional videos at www.lymanproducts.com. Being a non-technical person, I welcomed all this new information. I picked out two outstandingly grungy specimens from my collection: a very much modified and accessorized Colt 1991A1 pin gun, and a WWII-vintage Smith & Wesson Victory Model revolver. I removed the grips from both, field-stripped the Colt, removed the cylinder and side-

plate from the Smith and placed all the metal parts in the plastic basket in the unit's stainless steel tank. Then I poured in enough distilled water to cover the parts, and added the prescribed amount of steel cleaning solution, which turned the water a light blue color. Following the directions, I punched the appropriate buttons on the keypad to adjust time and temperature, closed the cover and waited for the temperature to get up to the proper level, then started the cleaning action. The machine makes a soft humming sound while it cleans.

Ten minutes later, the humming stopped. I attached the supplied drain hose, which I ran into an empty gallon jug, and drained the tank. The fluid that came out was a very dark blue-black color, nearly opaque. I removed the basket, and set it on a pile of paper towels. The gun parts were clean. The cleaning solution provides some corrosion protection, and it's recommended that parts be lightly re-lubricated after they've dried out thoroughly. Drying action can be accelerated with an ordinary hair dryer or an electric heat gun on a very low setting.

If you have a polymer-frame gun, such as a Glock, the folks at Lyman inform me that it, too, can be safely cleaned in the Turbo Sonic cleaner.

If you dread the prospect of cleaning your handguns the old fashioned way, welcome to the club. Now, there's a far, far better method, and it's not smelly or messy or labor-intensive. The Lyman Turbo Sonic 6000 ultrasonic cleaner has an MSRP of \$349.95, but I've seen it in various catalogs at under \$300. Your guns will thank you.

Lyman Products Corporation

475 Smith Street • Middletown, CT 06457

Shooting Tip: The Finer Po

This 1911 features grip tape on the frontstrap, and another, smaller piece in front of the slide stop as a felt index for the support hand thumb during the draw.

Taking grip tape, wrapping it around the frontstrap of a 1911, and holding the "tails" in place by pinning them under the front of the grip panels is a common use of grip tape.

(From Left) Frontstrap: This piece of grip tape has had holes cut to accommodate the finger grooves on the Glock frontstrap.
 Trigger Guard: Applying a piece of grip tape to the underside of the trigger guard is a modification either loved or hated by those who try it.
 Right Side Panel: On the author's Glocks the right side grip panel is left bare of grip tape.

By Duane Thomas

One of the most commonly performed upgrades to the serious shooter's gun is some method of increasing traction on its grip frame. The easiest way to accomplish that is to apply grip tape. In my experience, I would say that, as a shooter's skill level increases, their attitude toward grip tape tends to progress along a common path.

(1) We start out with no tape, just the factory stock "naked" grip, and find the gun shifts in our hands during rapid fire.

(2) We wrap skateboard tape all around the grip like we were preparing it for the sarcophagus. How could that not be a good thing?

(3) We realize that having the entire grip that sticky interferes with things like sliding the hand smoothly into place on the draw, and flipping the gun in our hand to punch the mag release button during a speedload. We realize there are times we NEED our hand to move on the gun, and the grip tape prevents that.

(4) We start pulling off grip tape in certain areas until we still get enhanced traction where we need it, but we can still slide our hands on the grip when and how we need to.

I used to have grip tape on the frontstraps of all my Glocks, also on the left and right grip panels. Then I found that was screwing up my draw. I pulled the tape off the frontstraps, and off the right grip panels, but left it in place on the left grip panels. The added traction of my support hand against the grip tape on the left grip panel really does help control the gun in recoil. But NOT having grip tape on the right grip panel and frontstrap allows my hand to slide smoothly into place on the draw, and I can more easily flip the gun in my hand during a speedload.

Show me someone who has grip tape all over their gun butt, I realize I might be in the presence of a fine shooter; I also might be in the presence of a person who is on the Path but maybe hasn't quite figured out a few things yet. Show me a right-handed shooter who has grip tape only on

ints of Applying Grip Tape

This Glock 17 has grip tape on the left grip panel and frontstrap. The author has remained a fan of the former, foregone the latter.

Note the author has cut a piece of ladder tape to follow the contours of the lozenge of cobblestone roughening already existent on the Glock grip.

(From Left) Left Side Panel: The left grip panel receives a piece of ladder tape. Note the pieces of skateboard tape on the backstrap. RFT-2 and RTF-4: Two attempts by Glock to factory roughen their grip frames have been the RTF-2 and the RTF-4 (the latter being standard issue on Gen-4 Glocks). Still the author prefers grip tape to either factory treatment.

Gen 3 & 4: A comparison of the Gen-4 grip frame (left) versus Gen-3 with a combination of ladder and skateboard tape (right).

his left grip panel, I know I'm in the presence of someone who's been doing this for awhile and figured out some things.

There are two materials commonly pressed into service as grip tape: skateboard tape and ladder tape. They both have their virtues and vices.

The texture on 3M Tread Tape (frequently called "ladder tape" because it's the stuff we find on the steps of aluminum stepladders) is hugely rougher than skateboard tape. What I like about ladder tape better than skateboard tape is:

(1) Skateboard tape is just sandpaper with adhesive on one side, thus, being paper it wears out and requires replacement on a regular basis. Ladder tape is polypropylene, i.e. plastic, so it never wears out. One application of ladder tape can last you, well, forever.

(2) Because it's plastic I can take a file to the material and blunt its texture to any level I choose. And I do choose. The very idea of running un-defanged ladder tape on a gun makes my hands bleed.

Where skateboard tape shines is when you have to apply grip tape to a curved surface. Plastic ladder tape is much stiffer than paper skateboard tape and has much more of a memory that it started out flat. Put ladder tape around a curved frontstrap or backstrap, in short order it will begin to straighten out and come loose. Skateboard tape won't.

Aside from the grip panels, another possible location for grip tape is the underside of the trigger guard, especially on a gun like a Glock where that area is both wide and flat. This is one of those things you're either going to love or hate. Try it and see which it is for you.

Applying grip tape, versus actually having the gun butt itself checkered or stippled, is much less expensive and it's *reversible*. If in the fullness of time you find out you don't like grip tape in a particular place on your gun, you can simply pull it off. You can add, subtract, mix and match, until you finally decipher the combination that works for you.

KEEP YOUR GUNS!

J. Dewey Mfg. Co.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits all AR-15s and AR-10s with standard and oversized take-down pins up to .316" in diameter.

To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

Evolution Gun Works
 These two-piece flat checkered mainspring housings with bolt-on mag wells are similar to the patented one-piece S&A design. The mag well and checkered mainspring housing are machined from solid bar stock steel and can be used without the mag well attached, although there will be a small dovetail below (this does not impair function). This is a great replacement for plastic mainspring housings on full-size or compander model 1911s.

ElZetta

Tactical Flashlight Mounts

Every ElZetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the ElZetta® ZFL-M60. (Sizing Adapters are not required when using an ElZetta ZFL-M60 or other 1-inch lights.) The ElZetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular ElZetta ZFH1500.

The NEW ElZetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the ElZetta ZFL-M60. The ElZetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

PROTEKTOR MODEL

The Original Leather Sandbag* Rifle Rests

All Protektor Model leather bags are made with the best top grain cowhide available. The welded steel rest is strong enough to stand on and won't break if dropped (Owl Ear Front Bag sold separately).

A. Front Bag	K42-10880	\$19.95
B. Rifle Rest	K42-10883	49.95
C. Std. Front Bag	K42-10881	22.95
D. Rear Bag	K42-10882	26.95

*Sand not included.

The Dillon Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snapper-release buckles. Dimensions: 66" x 27.75"

K42-18146 \$65.00

This three-piece shooting bag set is an incredible value for the money! The bags are made of durable, water-resistant 600 denier polyester and provide a steady and solid shooting system for long guns and handguns. I filled the ones in the photo with walnut tumbling media and found them to be easy to fill and much lighter to carry than when filled with sand.

K42-15384 \$19.99

72 FROGLUBE CLP

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products. Frequent use will keep firearms running at optimal performance and not harm the FrogLube coating.

CBD™-M1

The Chambersafe CBD™-M1 is a revolutionary design for firearm safety that actually blocks the chamber of the firearm. It's easy to use and extremely fast to remove. The CBD™-M1 allows for visual confirmation that a firearm is safe to handle. Applicable to all fields where firearms are used and works with many firearms.

Millett Designated Marksman Tactical Scope

The Designated Marksman Scope fills the requirements of the law-enforcement officer, rifle shooter, and the big-game hunter who needs a quick sighting system at ranges of five to 500 yards. The "Dot in a Donut" reticle allows for fast, natural aiming. The shooter's eye lines up the circle at close range, and the one-MOA dot gives accuracy at the longer ranges. Range estimation is straight forward by use of the circle out to

500 yards. Compact design, 30mm tube and bright illumination of the reticle are just a few of the many features of the DMS-1. Bright red illumination of the reticle adds to the quickness of the sighting system in day and low-light conditions. At one power it works well as a reflex sight and at longer ranges the four-X magnification gives increased accuracy.

K42-19458 \$249.95

Bushnell Trophy TRS-25 Ultra Compact Red Dot Sight

Bushnell's Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell's high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute of angle dot.

K42-11643 \$89.95

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle K42-25374 \$79.99
Scout Scope Mount for SKS Rifle K42-25373 78.99

Tactical Sports 45° Offset Mount

A twist of the wrist is – quite literally – all it takes to switch from your long-range optic to a CQB red-dot sight with Tactical Sports' 45-degree Offset Optics Mount! Fits most Picatinny rails. (Pictured with Bushnell's TRS-25, which is NOT included!)
45° Offset Optic Mount K42-14472 \$14.99

90° C-More Mount

You won't believe how much this will decrease your times from initial sight picture and target transition. You'll never lose your dot...and finding it has NEVER been easier! Turning your C-MORE (Railway or Slide Ride) 90 degrees and eliminating the rail mount will lower your dot by as much as 1" to the bore of your pistol...and lower is just going to increase your speed. And when you do torque your pistol, you'll find the dot just that much easier. Designed by Bearcave Machining and offered by TACCOM, LLC.
Ruger MK1 (pictured) K42-19535 \$79.95
Browning Buckmark K42-19534 79.95

Millett's 100% aircraft aluminum alloy mount allows you to attach your optics or accessories on a Picatinny rail while maintaining co-witness with your iron sights. For added versatility, the mounts are equipped with removable shims for 1" to 30mm tubes.

How do you make a Savage rifle even more accurate? Well, as the adage goes, you can't kill what you can't see, so you include a Nikon 3-9x40 BDC reticle scope, mounted and bore sighted. This unique reticle can be ballistically matched to your exact cartridge using Nikon "Spot On" Software. Coincidentally, the price of the New package is "Spot On" too. See your favorite Savage dealer for details.
