THE RUGER® LC9s®

LIGHTWEIGHT AND COMPACT PERSONAL PROTECTION

Trigger Pull Comparison

Includes Finger Grip Extension Floorplate

Just Slightly Larger
(Less than 1" Taller
and 1" Longer)
than the Popular and
Incredibly Compact LCP®

**STRIKER-FIRED,
CENTERFIRE PISTOL**

Dovetailed, High-Visibility 3-Dot Sight System with Drift Adjustable Rear Sight and Fixed Front Sight

LC9s® Pro Comes Without External Safety and Magazine Disconnect

Striker-Fired with Short, Light, Crisp Trigger Pull

The all new, striker-fired Ruger® LC9s® and LC9s® Pro feature a short, light, crisp trigger pull for faster shooting and improved accuracy. The LC9s® and LC9s® Pro provide slim, lightweight and compact personal protection with a blued, alloy steel slide, a high-performance, glass-filled nylon grip frame, aggressive checkering and an easily acquired 3-dot sight system. Both models use all LC9® accessories and holsters and are just slightly larger (less than 1" taller and 1" longer) than the popular and incredibly compact LCP®.

Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

We READ Our Mail!

Just a note to your phone guys – all of them are awesome! Bought my Square Deal a hundred years ago, then the 650 and the 1050 ten or twelve years ago or so. Your tech guys are always spot on with the correct answer, friendly and cheerful. Thanks for producing and supporting your great products that let us spend less time reloading, and more time at USPSA or 3Gun matches. Happy Upcoming Holidays to all! DVC

Pat Bashford – pbimpala@swbell.net

Thanks, Pat! You're right about our phone guys. Without them, we'd be just another reloading equipment company.

I always wait eagerly for your next issue of **The Blue Press**. Your article on the "Mare's Leg" along with the Steve McQueen history was very informative. I'm looking forward to the Rossi article. I would love to own one, but they are not "California compliant" at this time. Keep up the great work keeping us informed.

Bruce J. Leininger – DriverAwareness24-7@razzolink.com

That [S&W Highway Patrolman Revolver] article [in the November issue] struck a nerve. I bought mine in 1960 from Ms. Van Orden at Quantico, Virginia, for the princely sum of \$69.00 while I was a poor graduate student. She gave discounts to military shooters and others who bought there. I had no idea she had named the gun! Mine is a 6-inch barrel version Model 28 with no dash. I still have the original box it came in. In 1961, I returned it to S&W as the trigger pull was very poor. They did a great job of making it good. It is like new except for some bluing wear near the muzzle as I keep it in a leather holster I have had for 55 years.

Dan Brown – brzpq35mx@att.net

My first handgun, ever, was a Model 28 Highway Patrolman with a 6-inch barrel. I got it in 1974 when I was a Plebe (4th Classman) at the Military Academy and it has seen some very good use in the 40+ years since my father delivered it to me and I "checked it in to the Academy Armory." I still have it. I will never get rid of it, and I'm even thinking about being buried with it, in a few decades, hopefully. (Loaded, of course, with a couple of full N-frame .357 Magnum speed loaders in my pockets. One never knows what one will face in the afterlife!) My son has agreed to make sure of my wishes, if I don't leave it to him, which, I very well may do if he makes a good enough case! Thanks for the article!

Rich VanOrsdale CPT(R), USA, Ret (dslb)

Rich, I was hoping not to NEED any of my N-frame revolvers when I go, but you do make an interesting point. Maybe I should reconsider!

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550B

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls for each ear
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

NOT JUST ANOTH

Sig Sauer 1911 Emperor Scorpion

Reviewed by Peter Caroline

I couldn't make it to the NRA Annual Meeting in Nashville, but a friend who was there sent me some photos of items that he thought might pique my interest. One gun stood out for its striking appearance. It was a Commander-length 1911 with a bobtail grip, ambidextrous safety and external extractor. The finish was described as "Flat Dark Earth," although it certainly resembled no earth I'd ever seen. The trigger, hammer, sights, grip panels, external extractor and controls were all flat black. The official designation was "SIG SAUER 1911 Emperor Scorpion Traditional Carry Fastback .45 ACP" or "1911FTCA-45-ESCPN" for short. Fortunately, this entire litany was not stamped on the gun.

Now, I'll admit I have a weakness for unusual guns. One of my friends described it rather unsympathetically, "You like weird \$#!+." Well, I've learned to live with it. Anyway, disregarding the

sci-fi nomenclature, I truly appreciate a handgun that accommodates my lefthandedness, so I sent off a request to SIG for a review sample.

When the Emperor Scorpion arrived, I disassembled it. No surprises there, or special tools required other than your basic 1911 barrel bushing wrench. I stripped off the factory lubricant with automotive starting fluid (ether) and applied some Militec-1. The slide operated very smoothly, and the trigger pull was a consistent 4-3/4 lbs. The SIG-monogrammed Hogue grip scales, which were described as "piranha-textured G-10," are of a fairly aggressive non-slip pattern, and the black mainspring housing has a similar pattern. The front of the grip is finely checkered. The beavertail grip safety has a memory bump for positive operation. SigLite® tritium night sights are fitted front and rear, with the rear sight being adjustable for windage. Overall, the gun feels quite solid, almost heavy, although it weighs exactly 33 ounces with-

ER PRETTY FACE ¹¹

Traditional Carry Fastback .45 ACP

out magazine, which is just what an all-steel 4.25" 1911 usually weighs. The rounded butt feels quite comfortable in my hand, and supposedly doesn't print as obviously under a shirt or jacket. One minor quibble: the ambidextrous safety has rather small thumbpieces. Under stress, one's small motor coordination tends to go to hell in a hurry. For serious defense use, I'd replace the SIG's ambi safety with an aftermarket unit with larger paddles. And, for my aging eyes, I'd probably replace the stock sights with XS Big Dot Tritium White Stripe Express sights.

At the range, the Emperor Scorpion performed with total reliability, and was a pleasure to shoot. With Winchester white box and Remington UMC 230-gr. FMJs, recoil is relatively mild, and offhand groups stayed within 1" to 1-1/2" at 15 yards. The grips are quite "grippy" and there's no way the gun is going to change position in your hand in rapid fire. I fired off most of a box of Atomic® 45 ACP+P 185-gr. Bonded Match Hollow Points. These move out smartly at 1,225 fps, and can be a bit of a handful in a pistol with smoother grips, but the SIG handled them with no fuss. I brought along a

mixed bag of odd brands and military surplus rounds, some dating back to WWII, and these posed no feeding or extraction problems whatsoever. As far as I can tell, the external extractor functions just as well as the traditional internal configuration.

Overall, I was quite impressed with the SIG Emperor Scorpion. It is solid as a rock, and masterfully constructed. It comes with a sturdy, lockable hard case with two 8-round magazines, which can be easily disassembled for cleaning. Each magazine has seven numbered witness holes on both sides and an extended baseplate that facilitates slamming the magazine in place without pinching your hand in the process. At an MSRP of \$1,079.99, the SIG looks, feels and performs like a far more expensive pistol. I've owned and fired a number of SIG handguns over the years, and have liked them all. And this one is the best one yet.

BL 550 Dillon's Basic Loader

\$259⁹⁵

L85-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount L85-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

One-Inch Bench Wrench	L85-10842	7.95
Square-Deal-Only Wrench	L85-19970	8.95

Dillon's Strong Mounts

increase your machine's "footprint" to over 10",

spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL550/XL650	L85-22051	\$48.95
XL650-only	L85-22052	45.95
Square Deal "B"	L85-22223	64.95

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550B and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL 1050.

Bullet Tray Kit	L85-22214	\$41.95
RL 1050 Tray Kit	L85-22215	41.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System
L85-97126 \$145.95

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

L85-16306 \$41.95

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Alum. Roller	L85-17950	\$45.95

Dillon's Case Preparation Equipment

CV-2001
L85-20493
\$188.95

CV-750 L85-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator L85-20675 \$75.95

CM-500 Case/Media Separator L85-21045 \$47.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 L85-22047 \$213.95

Euro CV-750 L85-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **L85-13804** **\$8.95**
Case (20 pc.) **L85-20255** **135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **L85-13733** **\$8.95**
Case (20 pc.) **L85-20256** **135.95**

Half and Half 10 bottles of polish /10 of lube

Super 1050/RL 1050 Short Trim Die Toolhead

L85-62219
\$224.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. (NOTE: the Blue 1050 toolhead stand - Part Number L85-62200, \$49.95 - is not included.)

Dillon's New Rapid Trim 1500 Case Trimmer ²³

Dillon's RT 1500 shown installed on an XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (Vacuum cleaner and hose not included.) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer Assembly **L85-62164** is **\$329.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (Please see chart below). Replacement carbide cutting blades, **L85-13141**, are **\$19.95** each. Upper lock rings, **L85-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Dillon's NEW Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access,

has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle Holsters' Conceal-Carry Performance Series

If Cowboy Action Shooting is your game, why not CARRY the gun you shoot the most? These holsters can be worn strong side, appendix carry or cross draw and are fully molded. Now also available for J-Frame S&Ws.

4-3/4" SA Colts/clones **L85-11560**
4-5/8" Ruger Blackhawk **L85-15765**
Ruger LCR **L85-29030**
2" J-Frame S&W Rev. **L85-15764**

"Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

UM Tactical Universal Sight Mount and Holster System

UM Tactical has created a universal sight mount that will fit all pistols with a 1913 Picatinny rail. Although many sight mounts exist; what makes the unit produced by UM Tactical unique, is that it will mount and dismount from your firearm in under 30 seconds with no tools or gunsmithing. Once set up with your favorite scope or red dot sight, the mount and optic can be taken on and off your firearm and still hold the zero. This high quality mount is constructed from CNC machined aluminum and is finished in MIL-SPEC Type III anodizing.

UM Tactical's UMH3 Universal Holster attaches to the UM3 sight mount and not your handgun. This unique design is hand made and is constructed of thermoformed plastic (Boltaron).

BLADE-TECH™

“Revolution” Holster Series

Blade-Tech used its extensive knowledge of Kydex® holstermaking to bring you the Revolution line of holsters. Using a proprietary blend of polymers, Blade-Tech has engineered these holsters to offer lifetime performance in a wide range of conditions. The holsters won't become soft in extreme temperatures (over 300° F) and won't become fragile in low temperatures.

Dillon's Pistol Die Sets

Size Die

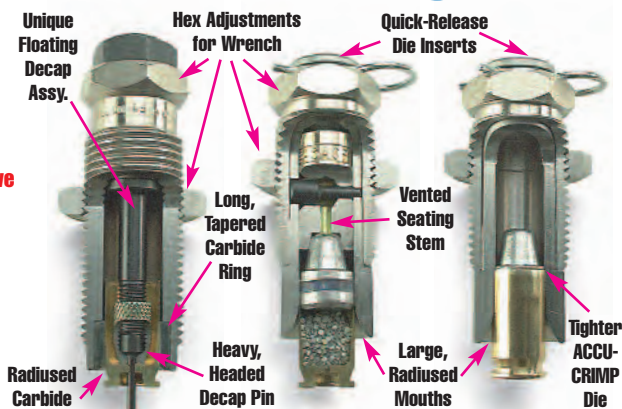

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

Spare Decapping Pins

Package of 10	185-21528	\$5.75
---------------	------------------	---------------

Dillon's Rifle Die Sets 35

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process.

Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Dillon Rifle Dies (Three-Die Sets)

WALKING WI

Dick Plowden with his crew chief (left) and P-47 fighter.

Dick Plowden today at 92 years of age. He holds a model of a P-47 with his colors, and a "liberated" Walther PPK.

By John Marshall

Some still walk pretty well, considering their age. Others may need a cane or a walker to get around these days. Others require a wheelchair. Many folks might regard them as ordinary senior citizens, but they are in no way ordinary. These are the men and women who served during World War II, and they are GIANTS in every sense of the word.

Sadly, 75 percent of the WWII veterans are now gone. They are passing from this world at an increasing rate, now estimated at over 1500 per day. The ones remaining alive now average 93 years of age. During their time left on earth, these incredible people deserve all the respect we can give. Together, as the war developed, they dropped whatever they were doing to serve. When their nation called, they donned uniforms and helped save the world from tyranny. Many went in harm's way and suffered incredible hardships.

Some were there at D-Day. Some fought in Europe in places such as the Ardennes Forest in the winter of 1944-1945. Others fought the fanatical followers of the Rising Sun tooth and nail in the Pacific. Some fought on the sea, others in the air, and many slugged it out on the ground. Untold thousands served in the continental U.S. and our territories to support our fighting troops. They all re-shaped the world in the process. We acknowledge their incredible contributions by calling them

"The Greatest Generation." We are fortunate to still have a few of them among us.

It was not until fairly recently that our country built a memorial to these men and women of World War II in Washington, D.C. It's situated between the Lincoln Memorial and the Washington Monument on the National Mall. Completed in 2004, it came too late for most WWII vets to see it, and most of those remaining have not had the money or the means to view this magnificent homage to their efforts during the war. We'll talk about how that's being corrected in a moment.

I count among my friends a great guy who flew P-47s in Europe during the war. Then-lieutenant Dick Plowden was assigned to ground-support missions in France and Germany. Many men probably owe him their lives as he pounded elements of Germany's *Wehrmacht* in front of them with .50-caliber machine gun fire and bombs. His aircraft was once crippled and unable to fly further while on a mission over the Rhine River. An oil line was severed by flak and his canopy was torn up, raking his face bloody with its plastic shards. Painfully, he bailed out, lucky to be rescued by ground troops. After recuperation and receiving a

TH GIANTS

Dick and the author "taking a breather" by the Potomac River.

The changing of the guard at The Tomb of the Unknowns.

Purple Heart, he was soon back in the cockpit of another plane to continue supporting our guys on the ground. Dick survived, and when he returned from the war, he continued to serve in the Army Air Corps reserves, and then in the USAF reserves, retiring as a Lt. Colonel.

Earlier this year, Dick called me and told me had heard about and had contacted Honor Flight Arizona (honorflightaz.org). I didn't know much about this organization, but it turns out that these folks have made it their mission to fly remaining Arizona WWII vets to Washington, D.C. at no expense to them in order to view their memorial and the other war memorials in our nation's capitol. Honor Flight Arizona is but one hub in the national Honor Flight organization (honorflight.org). They told Dick they would schedule him for a flight in the fall, but that he would require someone to accompany him as his guardian during the event who would be willing to fly at his or her own expense. Normally, this privilege is fulfilled by family members, but Dick has no sons or daughters, and his wife had passed away not long ago. He asked me if I would be willing to do this. I jumped at the chance – a small

favor for someone who was flying in harm's way valiantly for us all when I was just a small child.

To make a long story short, Dick and I joined 26 other WWII veterans and their guardians on a flight in September 2015. It included two women – an Army WAC supply sergeant who served in San Francisco and a Navy WAVE who performed administrative work in Washington, D.C. Southwest Airlines first flew us to St. Louis for a brief stopover, and then on to Baltimore, where we were billeted in a local hotel.

The next morning we boarded the bus at the hotel, and made our way first to the Navy Memorial in D.C. All of us were color-coded by our t-shirts on the trip – the WWII vets in yellow, and the guardians in light blue.

We next made a brief stop at the Franklin Roosevelt Memorial, where Dick and I took a breather by the Potomac River. There was a nice view of the Washington Monument. The next stop was the one that this group was really looking forward to see – the World War II Memorial [*large photo above*]. According to the website, wwiimemorial.com, "the World War II Memorial honors the 16 million who served in the armed forces of the U.S., the more than 400,000 who died, and all who supported the war effort from home. Symbolic of the defining event of the 20th Century, the memorial is a monument to the spirit, sacrifice, and commit-

ment of the American people. The Second World War is the only 20th Century event commemorated on the National Mall's central axis."

After brief trips to the Vietnam, Korea, and Marine Corps memorials, Dick was pleased to see the Air Force Memorial. As an Army Air Corps/USAF veteran, he was particularly touched.

Next, we made a pilgrimage to Arlington National Cemetery, where so many of our nation's heroes are buried. While there, we also viewed the changing of the guard at the Tomb of the Unknowns.

This one day was quite exhausting. The next day, before our flight back to Phoenix, we made a stop to see Fort McHenry, where Francis Scott Key was inspired to write the words to our national anthem, "The Star Spangled Banner." The Fort remains with most of its original buildings, breastworks and cannons. The cannons still watch over Chesapeake Bay, where the British ships bombarded the fort in 1814.

On the return flight, the veterans were treated to a "mail call" where they each received written thanks from many people all over the country for their honored service during the war. This was a very emotional time.

Upon arrival back in Phoenix, our Honor Flight contingent was treated to a massive greeting from hundreds of friends, family and motivated folks as they walked off the plane. The veterans were then

A view from the ramparts at Fort McHenry, the site of the September 13, 1814 naval bombardment that inspired Francis Scott Key to write the poem, "Defense of Fort M'Henry," the first verse of which provided the lyrics for "The Star Spangled Banner."

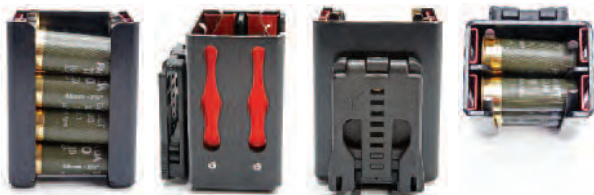

presented with big banner crafted by school children thanking them for their service.

It was the hope of all of us who participated in this Honor Flight trip that these vets realized how much we all appreciated the massive contribution they made to the preservation of our way of life as a free country. From the expressions of the vets, we think we succeeded. It was a pleasure to walk among these GIANTS for a few days. It's a trip I'll never forget, and I'm sure these honored veteran gals and guys will treasure the memory as well. **P**

40 California Competition Works' 12 Ga. Shotshell Tactical Strippers

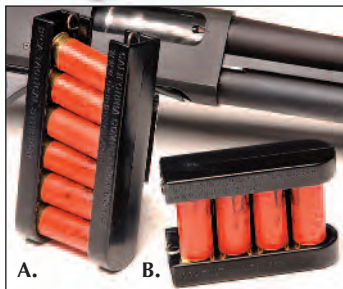

Sorry, Baschieri & Pellagri target slugs not included.

California Competition Works' Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

CLASSIC FIREARMS: The S&W

By John Marshall

In its long history, the famed gunmaking firm of Smith & Wesson has had very few dead-end products that never achieved significant success. Some of these included the Model 1913 .35 caliber pocket pistol and the tiny Model 61 .22 caliber Es-cort pistol. These were simply financial disappointments. But in 1941, one of the least known dead-end guns in S&W's history almost proved to be a complete disaster for the company and could have ended its very existence. This is its story.

In 1939, Smith & Wesson was struggling to get out of the throes of the Great Depression, and was in deep financial stress. They were seeking new business that could lift them out of their problems. You can imagine the company's joy when the British government approached them to consider designing and producing a new light military rifle. The challenge was immediately accepted, and the project was assigned to Edward S. Pomeroy, then the plant superintendent and chief designer. Although Pomeroy lacked much actual design experience, he went right to work, completing his unique design on June 28, 1939. Patents for his innovations were subsequently obtained on September 3, 1940.

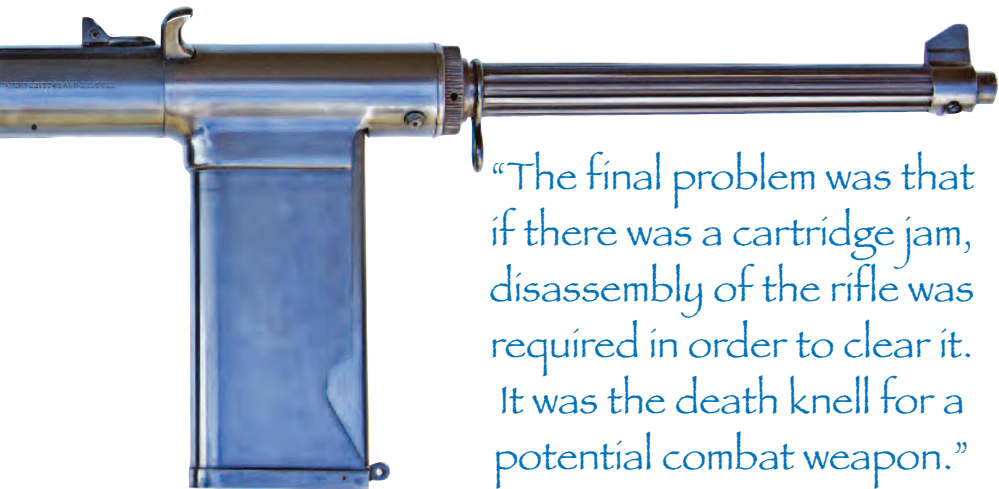

The new rifle was unlike anything seen before or since. It was a semiautomatic open-bolt blow-back design, chambered to fire 9mm Luger ammunition. Fairly heavy since it was all machined steel except for the plastic stock, it weighed about 9 pounds when loaded with a full 20-round magazine. The barrel measured 9-3/4" long, with the overall length coming in at a bit more than 32". What was immediately noticed about the gun was what appeared to be an unusually large magazine, and the fact that there was no visible ejection port in the very long receiver. What Pomeroy had designed was unique. The "large magazine" was in

fact a housing that also served as a forward grip. In its front half, it contained the actual magazine. The rear half was hollow, forming a chute to channel the ejected casings straight down, thus keeping the hot brass away from the user or nearby personnel. A reciprocating operating handle moved through a long slot in the top right of the receiver. The rear sight was micrometer adjustable for elevation, and the front sight was fixed. The barrel had 12 longitudinal flutes to reduce weight. A rotating safety lever was located behind the trigger. When the trigger was pulled, the bolt went forward, chambering and firing the cartridge. This first model used a floating firing pin hit by a hammer within the bolt, cammed forward by a projection in the receiver as the bolt slammed home. As the bolt moved rearward and passed a significant distance beyond the rear of the magazine, an overhead ejector forced the empty case down off the face of the bolt, dropping it through the chute in the housing. A last round bolt-holding device was incorporated.

Immediately after submitting the design and some prototypes to the British, S&W started tooling up to produce what was then known as the 9mm Light Rifle. Enough interest was generated that the British government advanced S&W one million dollars to continue the project. In today's terms that was peanuts. However, in 1940 that was a stupendous amount and promised S&W a potential contract and the company's financial salvation. Production rifles were first assembled in 1940 and the gun officially became the Model 1940 Light Rifle.

And then stuff began to hit the fan, jeopardizing the entire project. First of all, American 9mm ammunition (with which the rifle was tested in America) was loaded to much lower pressure than that the European standard. Accordingly, when tested with the hotter overseas ammo, the extra pressure

S&W Model 1940 Light Rifle

“The final problem was that if there was a cartridge jam, disassembly of the rifle was required in order to clear it. It was the death knell for a potential combat weapon.”

took its toll. The rifle was prone to having its receiver's end cap battered and broken off after 1,000 rounds or so. The Brits told the Americans that the rifle was not surviving the required 5,000-round test, and they requested an immediate engineering effort to correct the problem.

Smith & Wesson responded quickly with a second model. Its visually distinguishing feature was a rotating oversleeve that not only reinforced the receiver, but also acted as a bolt-lock safety, replacing the sear-blocking lever used on the first version. A fixed firing pin in the bolt made the primer ignition system simpler. S&W then designated the first version as the Mark I and the second type as the Mark II. The majority of the rifles obtained by the British were of the Mark I type, with only 200 of the 1,010 bought for the British and Canadians being the Mark II version, made in 1941. Those rifles shipped to the British Empire were sent in wooden crates, each containing ten rifles. Also included for each rifle were a barrel wrench, an instruction booklet, a sling and two magazines.

The British adoption of the Light Rifle was not to be. It had several strikes against it. Chamber inspection was close to impossible. It was very expensive to manufacture, with most parts milled from forgings. The final problem was that if there was a cartridge jam, disassembly of the rifle was required in order to clear it. It was the death knell for a potential combat weapon. All but five of those in British or Canadian possession were cut in half and dumped in the ocean after the war. Those five survivors ended up as museum pieces in the Tower of London, the British Military Museum, and Enfield Arsenal.

Upon rejection of the S&W contract, the British demanded return of their million-dollar advance payment. To counter this, Carl Hellstrom (later

President of S&W) proposed and negotiated a deal where the company would instead supply much-needed revolvers at a certain rate equal to the sum of the advance. This undoubtedly saved the company from bankruptcy. Hellstrom was quoted as saying that this negotiation was “the biggest challenge of my life.” Although the Light Rifle project was a disaster, it finally resulted, through revolver sales, in the much-needed answer to Smith & Wesson's financial woes. Eventual additional wartime contracts with the British and U.S. governments became the company's salvation.

The few post-war Light Rifles in U.S. collector hands were originally considered class III firearms by the Bureau of Alcohol, Tobacco and Firearms, since they were technically “short barreled rifles.” However, in 1974, Smith & Wesson uncovered a small group of crated, unfired Model 1940 Light Rifles – a bonanza for collectors. In 1975, ATF was successfully petitioned by a dealer to exempt these guns from the National Firearms Act, with no onerous paperwork or tax required to possess them. On March 30, 1975, 130 Mark I rifles and 80 Mark II rifles were released for sale. These were eagerly snapped up, and have become extremely valuable collector items today. The gun illustrated is a Mark I made in 1940. It's owned by AZFirearms.com in Avondale, Arizona, and I was pleased to get permission to handle and photograph it.

It's strange that “dead end” guns from major manufacturers become attractive and valuable so many years after their failure as possible commercial successes. Because they are rare, usually unique and historically important, they become keenly sought after. The S&W Model 1940 Light Rifles are part of this phenomenon, and have become definite classics. They provide a fascinating glimpse into a previously little-known World War II story. 

46 Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Berry's Mfg. Pan Sifter

L85-17519

\$9.99

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mms. Made in the USA and comes with a lifetime warranty.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

L85-21894

\$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

Shhh... Can I Have a

A GLOCK 19 fitted with an AAC TiRant 9 silencer would make an outstanding home-defense weapon in the author's opinion.

By Cameron Benz

I recently decided to add a sound suppressor to my home-defense Gen-4 GLOCK 19. When most people choose a home-defense weapon, they don't take into account noise, and what firing multiple rounds out of that firearm – indoors without hearing protection – would do to their hearing should they ever need the gun for its intended purpose. I do.

I own multiple 1911s and GLOCKS. Examining the problem, in short order it became obvious that adding a suppressor to the gun would be much more easily accomplished on a GLOCK than a 1911. Installing a threaded barrel to a 1911 would entail having a new barrel fitted. With GLOCKS, by contrast, threaded drop-in barrels are readily available, either from the aftermarket or as factory units straight from GLOCK. Aftermarket barrels generally utilize “American” 1/2”-28 right-hand threads whereas the factory 9mm GLOCK barrel uses “European” 13.5mm x 1.0 left-hand threads. This is something to keep in mind if sharing a silencer among various pistols. Since I opted for a factory GLOCK threaded barrel, whichever silencer I selected would need the 13.5mm x 1.0 left-hand threads.

Historically, suppressors have had a negative effect on autopistol reliability. Most autopistols operate by having the front of the barrel tilt up, while the back tilts down. The weight of the suppressor out front would retard upward movement of the front of the barrel, so much so that guns

The end cap of the AAC TiRant 9 can be unscrewed for disassembly and cleaning. The holes in the end cap engage the (included) wrench.

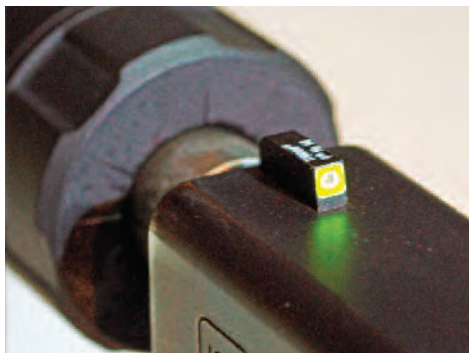

would frequently fail to cycle. To solve this problem, good quality modern suppressors are fitted with “boosters” (sometimes called a Nielsen device), essentially a spring-loaded, gas-activated piston that, when you fire the gun, protrudes from the back of the suppressor body and “pops” the front of the slide, giving it extra rearward energy, thus allowing the gun to cycle. Even with the booster doing its bit, my G19 does cycle noticeably more slowly with the suppressor installed. However, it always DOES cycle. I have yet to experience a malfunction with my gun/suppressor combo.

I had been using Warren Tactical Series sights, plain black on black. However, they weren't tall enough to clear the silencer, therefore the sight picture would just wash out against the back of a matte black silencer body. Black on black on black is a recipe for invisible sights. I considered taller silencer sights, but couldn't find anything I liked. Instead I chose a set of Ameriglo CAP sights with a high-visibility front blade that stands out against the back of the silencer. Also I liked the idea of not having significantly different height sights among

Moment of Silence?

The rear of the silencer unscrews to allow piston replacement. By pulling it forward and turning it to the next internal notch, the end user can adjust point of impact to more closely match POA of the unsilenced pistol.

The brightly colored AmeriGlo replacement front sight with tritium insert stands out well against the back of the matte black silencer body.

my various carry/competition GLOCKS. Shooting with both eyes open, I find my brain superimposes the sight picture picked up by my right eye over the target picked up by my left. It may sound strange, but it works for me.

I had two hard criteria for my silencer. (1) I wanted the pistol to be hearing safe if discharged inside a building. OSHA standards list 140 decibels as the threshold for hearing damage with impulse noise (instantaneous, sharp sounds, as opposed to sustained noise). A typical gunshot from a 9mm handgun runs about 160 dB, give or take a few dB. Suppressed, that can be brought down to about 130 dB at the shooter's ear. This criterion eliminated any of the "K" (short) silencer models as most were right on the threshold of 140 dB. (2) The silencer had to be capable of being disassembled for cleaning. Other, minor criteria were fairly vague, things like *not too big, not too heavy*, etc. This all pretty well narrowed my list down to models from SilencerCo and Advanced Armament Corporation (AAC). After a process of elimination, my last two candidates were the SilencerCo Octane HD 9 and the AAC TiRant 9. Then, right before the SHOT Show, I found a sale on the AAC TiRant 9 that made my decision for me.

I am very pleased with the AAC TiRant 9. Given its grade 9 titanium outer body, hard anodized 7075-T6 aluminum baffle, and heat treated 17-4 stainless steel blast baffle, the entire unit weighs only 8.8 ounces according to my postal scale. Having that much weight hanging off the front of the gun is just enough to significantly dampen muzzle flip and perceived recoil, however the gun's balance and handling qualities are impacted less than you might expect. The G19 is still light and slick and fast handling. Even though the sights do not clear the suppressor body, using the Cirillo Silhouette Point technique, where you use the shape of the gun, and in this

case the suppressor body, as well as, in essence, one big sight, fast A-zone hits on multiple USPSA targets at 5-7 yards came easily. At distance I find the sights/target superimposed approach mentioned before works better.

By the time I wound up paying for the discounted silencer, and miscellaneous fees, in total my silencer wound up costing \$1,025. Let's take into account that, if I ever had to use it in self-defense, my gun, with silencer attached, would in all probability wind up in a police evidence locker for a few months, until a grand jury could give my actions its blessing. Frankly, this doesn't bother me. My hearing, and the hearing of my loved ones, is more important to me than the money I spent on a silencer that has, by this time, done its job. Besides, when I get it back, I won't have to replace batteries in it like I would in a hearing aid.

Some may say they keep earmuffs near their home-defense piece; they'll throw them on when the balloon goes up, so they don't need a suppressed gun. They fail to take into account, their loved ones probably don't.

With suppressor removed, the G19 still serves as my daily concealed-carry gun. (I do install the thread protector to the end of the barrel when carrying concealed.) But when I get home and the gun makes its magical transformation from concealment piece to domicile-defense weapon, the AAC TiRant 9 and SureFire X300 weapon-mounted light get installed. Firing the gun with suppressor in place and no hearing protection, running Black Hills 147-grain JHP subsonic ammo, which is of course more easily suppressed than supersonic 9mm, muzzle blast is quite tolerable. It's still obviously there, but not unpleasant or injurious. My Glock 19 has now become a gun I could fire for multiple rounds inside a small room (for instance, my bedroom at 2 A.M.) without damaging my hearing, or that of my loved ones. I *LIKE* that. **DP**

50 "Big Fifty Reloader"

STANDARD FEATURES:

- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2"-12 UNF Thread Dies
- Manual Shellplate indexing
- Average Loading Rate: 300 Rds./Hr.
- Loads High Volume/Match-Grade Ammo
- Milspec/Match-Grade Priming System
- Ductile Iron/Carbon Steel Construction

Dillon's New Bench Wrench Fits new 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Comtech's STINGER

THE STINGER:

Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger today!

L85-19495	\$9.95

ElZetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

THE ROSSI RANCH HAND

By Duane Thomas

In my recent review of the Chiappa mare's leg [November 2015 issue], I mentioned that Rossi also makes their version of mare's leg called the Ranch Hand, and promised a review. Like the Chiappa tested previously, my sample Ranch hand was chambered in .357 Magnum.

The Ranch Hand differs in several important ways from the Chiappa. To start with, it's considerably larger. The Chiappa has a 9" barrel and short butt. The Ranch Hand has a 12" barrel and longer butt. Overall length of the Chiappa is 20". The Rossi goes 24". While the Chiappa is patterned closely after Josh Randall's mare's leg from "Wanted Dead Or Alive," the Ranch hand is much more like (and I hate to use the term because of its legal connotations) a *short* rifle rather than a *long* handgun. Though legally it's still classified as a handgun, thus immune from the 16" minimum barrel length rule.

The Ranch Hand's longer barrel also means a longer magazine tube. Magazine capacity of the Chiappa is four rounds of .357 Magnum, five in .38 Special; with a round in the chamber that makes it either a 5-shot or 6-shot gun, respectively. In the Ranch Hand, capacity jumps one round regardless of cartridge, with .357s it's a 6-shot gun all-up, with .38 Specials it's a 7-shooter. Unfortunately, in common with most Winchester 1892 pattern guns chambered for .357 Magnum, hand cycling ammo through the Ranch Hand revealed it would not reliably feed the shorter .38 Special cartridges, so all testing was done with .357 Magnum.

The Chiappa features straightforward handgun-like post notch sights. The Ranch Hand has a brass bead front sight coupled to a buckhorn rear. The Ranch Hand has a large loop lever, unlike the Chiappa. It also, unlike the Chiappa, and at variance to the classic Winchester 1892, has an external safety lever.

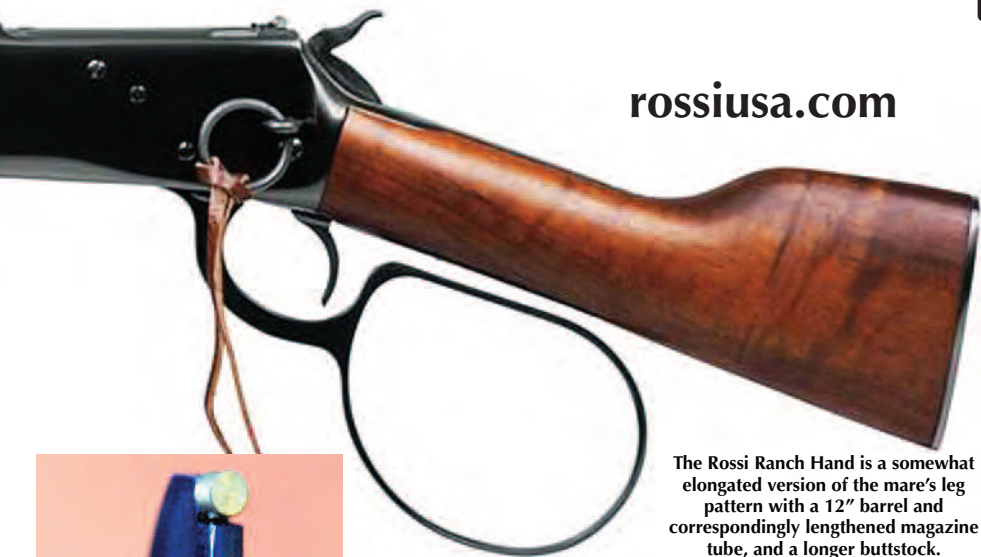

The forend on the Ranch Hand has much more belly than the Chiappa's. This means it didn't fit into my Mernickle mare's leg holster (previously shown in the Chiappa article). Well, that's not technically true, it did "fit" in the sense the gun could, with some effort, be forced into the holster. But getting it out again could not be accomplished in any sort of timely fashion.

The Rossi Ranch Hand was test fired with the same two .357 Magnum loads as the Chiappa. From Black Hills came their 158-gr. CNL, intended to give .38 Special ballistics in a .357 Magnum casing, for both light recoil and feed reliability in Model 92s used in Cowboy Action Shooting. The other load was the full-power Winchester 125-gr. JHP.

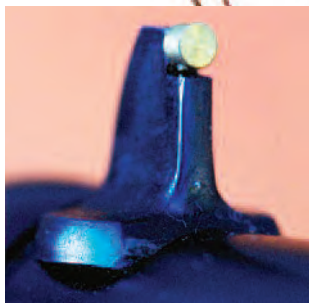

From the Chiappa's 9" barrel, the Black Hills load went 952 feet per second, the Winchester was 1,840 fps. I was curious how much velocity difference the Ranch Hand's extra 3" of barrel would make, velocity-wise. Answer: with the Black Hills (essentially .38 Special in a .357 Magnum casing, therefore a low-pressure load), not much, 986 fps, only a 34 fps difference. With the much higher pressure Winchester full-power .357 load, on the hand, the difference was much more profound, it trucked on out of the Ranch Hand at 1,956 fps, an extra 116 fps. That's pretty darn smokin'.

Accuracy with the Black Hills load was 2-13/16". With the Winchester it was 3-15/16". Not exactly gilt-edged accuracy. In the case of the Winchester load, that may have been because recoil was extremely punishing. While, when testing the Chiappa from the bench, muzzle flip was so extreme my friend Cameron commented, "Every time you pulled the trigger on that thing, I kept expecting you to turn to me with a bloody nose," the truth is it wasn't at all painful. The Ranch Hand was painful. In the Chiappa's case, a lot of the recoil was dissipated by muzzle flip. In the case of the Ranch Hand, perhaps because of the longer barrel, forend and magazine tube, therefore much more weight out front, there was much less muzzle flip, the gun recoiled much more straight to the rear. Every time I fired it, with the short butt snugged up to my cheek, it felt like my face was trying to become one with my teeth, and when I was done I had red welts on my face. I'm not going to say that firing five rounds of full-power .357 Magnum out of the Ranch Hand from the bench was the most painful, least pleasant thing I've ever done in my shooting career, but it's definitely in the top four. I will say that three of those five bullets went into a tight 3/4" group, which indicates to me the gun is capable of shooting more accurately than I was capable of firing it.

rossiusa.com

The Rossi Ranch Hand is a somewhat elongated version of the mare's leg pattern with a 12" barrel and correspondingly lengthened magazine tube, and a longer buttstock.

The front sight features a brass bead.

The forend has considerable belly. Note the buckhorn rear sight.

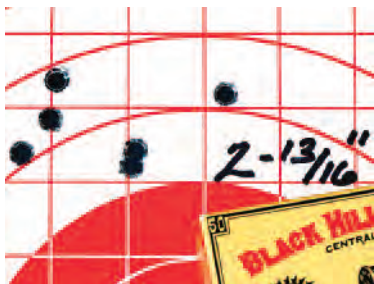

The Ranch Hand features a safety lever on top of the receiver.

On the left hand side of the Ranch Hand is found a saddle ring.

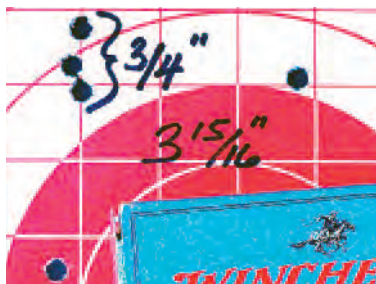

The lever is the large loop style, the buttstock shortened compared to a full-sized rifle.

Left: Black Hills 158-gr. CNL put five rounds at 50 feet from the bench into 2-13/16".

Right: The full-power Winchester 125-gr. JHP .357 Magnum posted this 3-15/16" group with three of those bullets going into a tight 3/4".

This was not the most fun gun I have ever shot in my life. However, if I can believe what I read online, a lot of people love theirs. Maybe you'll be one of them. The Rossi Ranch Hand is available in .357 Magnum, .44 Magnum, and .45 Colt. Just the idea

of firing a Ranch Hand in .44 Magnum makes my teeth hurt. If I was in the market for a Ranch Hand, I would be looking hard at the non-Magnum, much more lightly recoiling .45 Colt chambering.

Extra Loading Data Labels, L85-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Swab-its® - A Swab for Every Job!

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!"

The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform appli-

cation of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

Gun-tips® 3" Precision Tip foam swabs are reusable. 24-count value pack. **L85-15345 \$9.99**

Gun-tips®

Gun-tips® Extended Reach Firearm Cleaning swabs by Swab-its® revolutionize the way you clean your gun. The foam tips are lint free, reusable and ideal for cleaning trigger assemblies, slide rails, springs, extractors and anywhere else space is tight. 24 per package.

L85-12583 \$9.99

Bore-Whips™

Bore-Whips™ .17 and .22 caliber (pictured) by Swab-its® are ideal for air rifles, rimfires or any other .17 or .22 caliber firearm that's difficult to clean from the breach. The foam tips are reusable and the handle functions as an empty chamber indicator.

------------------	----------------

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is used in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	L85-15571	\$7.95
Slide-Glide Lite	L85-15572	7.95

Micron UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

Dewey's AR-Link Cleaning Pin

Utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

BURRIS

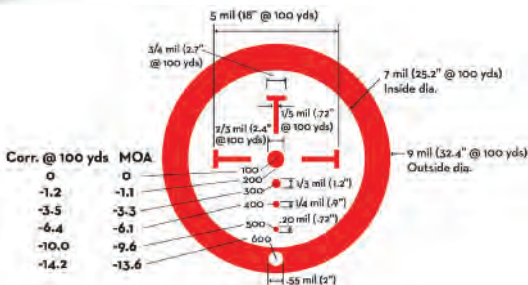

MTAC 1.5-6x42mm

The resilient MTAC 1.5-6x42mm riflescope is tough, with superb, glare-resistant glass and a sleek, snag-free profile. This compact model is perfect for 3-Gun, close quarter battle (CQB), or big-game stalking. With its high-performance glass, solid 1-piece tube, and internal double spring-tension assembly, this MTAC Riflescope can handle the harshest shooting environments.

And it's guaranteed by the Burris Forever Warranty™.

The fast-action Ballistic CQ™ reticle was designed for competitive shooters and law enforcement and military operators. The low-magnification, bright, fast-action reticle also serves dangerous game hunters well.

A circular, center "donut" provides ultra-fast engagement at close distances, and smaller reticle dots provide

trajectory compensation out to 600 yards for the 5.56 and 7.62 cartridges. The illuminated reticle gets you on target faster in any lighting condition and increases accuracy when the target is dark.

Elevation and windage dials are calibrated to 1 click = 0.5 MOA; both can be reset to 0 once the scope is sighted-in. The eye relief is generous – up to 4" – for comfortable shooting.

The scope features an ergonomic power ring for easy grip and quick power setting changes; finger-adjustable MTAC mil-rad target knobs for easy precision adjustments; and a rubber-coated eyepiece provides protection, comfort, and style.

1.5-6x42mm, 30mm Tube **L85-36666** **\$399.95**

C-MORE

SYSTEMS

Built for speed, these High Performance red dot sights will take your shooting ability to the next level. By using a single red dot as an aiming point, target acquisition is as simple as point and shoot. The unique Heads-Up-Display (HUD) design provides an unlimited field of view, while eliminating obstruction and tunnel vision common to tube style scopes.

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

*Sorry, the optic
pictured here is NOT
included with the
Scout Scope Mount.*

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

1925: GRANDPA DILL

Figure 1: Grandpa Dillon's 8mm Mauser saddle gun, made from a captured German Army 1916 Erfurt Model 1898 carbine brought back to California after WWI. Dillon and his 14-year old son Billy shaved the stock, added a lace-up recoil pad boot, and shortened the forepiece. This father-son project was a larger-caliber recreation of the 7mm Mauser granddad carried in South Africa a quarter-century earlier as a cavalryman in a Boer Commando. The homemade sporter was kept in a mail-order saddle scabbard (shown behind it).

By Brian Dervin Dillon, Ph.D.

A few weeks after the November 11, 1918 World War I Armistice all battlefield promotions made by General of the Armies J.J. Pershing were overturned by rear-echelon brass back in Washington, D.C. My grandfather, Mustang Lieutenant Colonel of artillery W.T. Dillon, was bumped back down to his permanent rank of Captain. To soften this blow, General Pershing made granddad the jack-of-all-trades, *de-facto* commander of the primary AEF out-shipment port at St. Nazaire, France. There, over the next half-year, he ran not only the Artillery and Ordnance but also the Signal Corps and Engineers departments. After more than 20 years of combat service on four different continents Grandpa Dillon was now responsible for loading and sending back to America everything from locomotives to captured German biplanes, on hundreds of cargo ships. He was fortunately excused from any share of Pershing's primary headache: *personnel*, the return of over a million uniformed Americans from Europe.

Long before the Armistice, for more than a year, Pershing had been badgered by Senators and Congressmen to assist in the creation of a proposed National Military Museum. The American counterpart to Britain's Imperial War Museum, then also in the planning stages, it would be administered by the Smithsonian Institution, and located in Washington, D.C. Both potential museums on opposite sides of the Atlantic were inspired by a traveling exhibit featuring captured German guns, uniforms, and many other battlefield trophies. This exhibit was very successful in drumming up coast-to-coast American enlistments in 1917. But Pershing was too busy trying to win the war that year and the next to respond to the constant stateside requests for specific kinds of loot for museological pipe dreams. After the allied

vicinity, the requests continued. So, consummate administrator that he was, General Pershing passed the buck down the chain of command, and dumped the "military museum" project in my grandfather's lap.

Captain Dillon consequently began filling out the Smithsonian's "wish list" one item at a time, finding a German tank here, a German field kitchen there, and a German field telegraphy station somewhere else. The best examples of each were set-aside in a large St. Nazaire warehouse reserved for the ever-growing collection for the proposed museum. By September 1919, Grandpa Dillon had enough German war loot to fill an entire steamship. He did just that, loading all of it onto the *USS Santa Rosa* (Figure 2), his final official act at St. Nazaire, then came aboard himself. The *Santa Rosa*, an American Expeditionary Force troop ship, now made her final return voyage to the United States. She carried more than 2,700 tons of German military souvenirs but only 50 human passengers. On Pershing's orders, Captain Dillon delivered this official AEF collection to the Smithsonian Institution by truck and by freight train. Then, on September 26, 1919, as a California war hero, he was presented by Senator Hiram Johnson and Congressman Julius Kahn to both houses, where he received the thanks of a grateful government. Still recuperating from a deadly German mustard gas attack a year earlier, granddad then headed from Washington, D.C., to Washington State: Fort Lewis, to be exact, to take up command of the first fully-mechanized 8-inch howitzer artillery company in the American Army.

Unfortunately, by the 1920s, the American public, earlier imbued with patriotic fervor, now wanted to put war and everything smacking of militarism behind it. Plans for the National Military Museum fizzled, and it was never built. Even-

LON'S SADDLE GUN

tually, different service branches claimed portions of grandpa Dillon's collection. The Fort Sill Artillery Museum got some of the captured German field pieces, Fort Knox got some of the German tanks, and so forth and so on. A couple of years ago, during a research visit to the Smithsonian Institution, I was very disappointed to discover that the remaining portions of the 2,700 tons of captured German World War I loot Captain W.T. Dillon brought over on the *Santa Rosa* had been thrown away decades earlier.

Fortunately, a few personal war trophies had not been turned over to the fickle feds in 1919. One of these, an 8mm Mauser (Figure 1) became the Dillon family saddle gun. Granddad was no stranger to Mausers: over his remarkable military career he had been shot at by troops armed with them on two different continents, and carried one himself on a third. Of the many thousands of 8mm German military rifles and carbines in the hands of American collectors, hunters, and target shooters today, the vast majority are WWII-vintage guns.

Identified as "K98 Mausers," no collection of Second World War long arms is complete without one. But compared to the numerous late examples from the 1930s and '40s, earlier Model 1898 rifles and carbines, Dough-

boy souvenirs from World War I like the one granddad hauled back from Europe in 1919, are much scarcer. Ours is a Kar98 carbine made at Erfurt in 1916 for the Imperial German cavalry and field artillery, a century old this year. It has the short barrel, just 23-1/4 inches long, and a "type 1" walnut stock, with no forepiece grooves, and weighs 7 lbs. Its low, four-digit serial number matches in all three locations. The Erfurt Arsenal was a leading producer of Model 1898 8mm Mausers, with over 13,000 employees at peak production in 1918. Captain Dillon modified his captured Mauser, turning it into a "sporter" with the help of his oldest son, my then-14-year-old Uncle Bill, in 1925. This father-son project recreated, albeit in a larger caliber, the cavalry carbine granddad had been issued by the Orange Free

State when he fought as an Irish-American volunteer against the British in 1899 (*Blue Press* #263).

The 8mm Mauser, also commonly called the 7.92 x 57 or 8 x 57, is arguably the single most important rifle cartridge in military firearms history. A greater number of successful military and sporting cartridges, including our own beloved .30-06 and current .308, are descended from it than from any other. Introduced in 1888, it was the first German military round designed for smokeless powder from the get-go. Overnight it made just about every other rifle cartridge obsolete. The earliest Mauser design, a single shot, black powder, bolt action firing an 11 mm bullet, was adopted by the Germans in 1871, just after their victory in the Franco-Prussian War. This first Mauser became a repeater once a tubular magazine, completely hidden by its forepiece, was added. However, the German military rifles and carbines developed for the brand-new 8mm smokeless round were not true Mausers. The *Gewehr* 1888 design, while still a bolt action,

Figure 2: The USS *Santa Rosa*, the WWI troop ship that grandpa Dillon brought 2,700 tons of captured German war loot, including the family saddle gun, back to America on in 1919. U.S. Navy photo.

owed more to Mannlicher antecedents than to Mauser ones. Its loading system was problematic, for its exposed metal magazine box, faired into the front of the trigger guard, could not be reloaded until all five rounds in the detachable clip with-

in had been fired and the clip jettisoned.

So Mauser designers began work to improve the *Gewehr* 1888, hoping to cure its shortcomings. By 1890 they had developed a much better bolt action with a completely internal 5-shot magazine. This could be fully charged with a stripper clip (Figure 3) then "topped up" as needed. Old-fashioned rivals of the new Mauser were single-shot, black-powder arms like the American Remington Rolling Block and the British Martini-Henry. These obsolete guns were abandoned in cobwebby armories around the world as military buyers from Africa, Asia, Latin America and the Middle East clamored for the new German bolt-action smokeless repeaters.

From the very beginning, however, the Germans considered the 8mm to be their own propri-

80 etary round, to be withheld from foreign buyers. They gladly sold Mausers to the Spaniards in 7mm, to the Swedes in 6.5mm, and so forth and so on, but reserved the 7.92 x 57 for themselves. They didn't want to end up fighting against any other military power evenly matched with their own preferred caliber. So, three years after the introduction of the Model 1888 German Infantry Rifle and its 8mm cartridge, came the Model 1891 Mauser, chambered for a smaller, 7.65 x 53 cartridge. This was commonly called the "Argentine" Mauser, after the country that, early on, bought so many thousands of them. Soon, other South American countries, Bolivia, Colombia, Ecuador and Peru, also ordered rifles in this caliber. So did the Turks, Germany's eventual allies two decades later in WWI. The "Mauser" name now became synonymous with "bolt action."

Next out was the Model 1892 Mauser, chambered for the even smaller caliber 7 x 57 cartridge. This became one of the world's most popular and widespread rounds. Over the next several years tens of thousands of ever-improving infantry rifles and cavalry carbines (Mauser bolt-action Models 1893, 1895 and 1896) were chambered for it, and sold on every occupied continent. The 7mm "Spanish" Mauser Model 1893 was the rifle American troops came up against in both Cuba and the Philippines during the Spanish-American War and then, later, the Philippine Insurrection. The carbine issued to my grand-

father by the Boers in South Africa in 1899 was a Model 1896 Mauser in 7 x 57. Grandpa Dillon, an irregular cavalryman, came to appreciate its reliability and accuracy. A decade later, Model 1895 7mm "Mexican" Mausers were the most common long arms in the hands of Federal troops during the long, drawn-out, Mexican Revolution between 1910 and 1921, and many revolutionary battles were fought where both sides shot this same round at each other. Grandpa Dillon reacquainted himself with this old friend during two tours on the Mexican Border in 1914 and 1916. Meanwhile, Mauser had also developed its "Swedish" 6.5 x 55 Model 1894 rifle and cartridge, which became standard for the Swedish Military, and a very popular hunting cartridge in Scandinavia. Norway also adopted this same cartridge for its own unique Krag bolt-action design.

After a full decade of constant improvement, and of using the armies of many other countries for trial-and-error field-testing of its products, Mauser made its final changes to its basic bolt-action design. The new Mauser Model 1898 was accepted as the replacement for the old,

Mannlicher-inspired, German Army 1888 Model. The Mauser 1898 *Gewehr*, chambered for the standard 7.92 x 57 military round, now had three locking lugs integral to its action: it was by far the strongest bolt action yet developed. Infantry rifles had very long 29-inch barrels; cavalry versions were much shorter. Grandpa Dillon saw the new Model 1898 *Gewehr* Mausers in action in China during the summer of 1900, the first time they were ever used in combat. They were in the hands of German troops marching alongside Dillon's own American Army units, fellow members of the "Eight Nations" allied forces fighting against the Chinese Boxers.

The 8mm Mauser round, like all of its smaller caliber brothers, employed a long, bottlenecked, rimless casing. The 8mm bullet of 1888, carried over for the first production 1898 Mausers, was an elongated, nose-heavy, 226-grain affair. My grandfather, in good Irish fashion, disparaged it as the "Cromwell" bullet, for it was indeed a "round-head." Its diameter was .318. With a standard smokeless charge in the long barrel it was not particularly fast, just over 2000 fps. It was, however, hard-hitting, and gave good accuracy at mid-range distances, up to 500 yards. The German Army, however, like all other European powers, did not train its infantrymen to shoot at distances that American soldiers considered "normal," so this bullet's long-range (over 500 yard) shortcomings (so nose-heavy, it oscillated, then tumbled) did not register on the German military mind. Grandpa Dillon, as early as 1900, called it "the wobbler."

After the great 1899-1902 proving ground of the Boer War, itself a rehearsal for WWI, it became obvious that a new and much more aerodynamic bullet was needed. Consequently, the Germans began to experiment with the *Spitzer* or spire-point design. The new projectile looked like a Jules Verne rocket ship, minus tailfins, completely different from the old, blunt, "door-hinge pin" 1888 bullet. The new, second-generation 8mm Mauser Spitzer bullet, standardized around 1905, was a very great improvement over the old round head. The 8mm Spitzer bullet was enlarged slightly, from .318 to .323 in diameter, and, in keeping with its streamlined shape, was also made much lighter than the earlier projectile, down from 226 to 154 grains. Improved powder was also used, and the new bullet cooked along 1/3rd faster than its ancestor, just under 3000 fps. It tracked flat, past 1,000 yards, keeping its "spin" much longer than its antecedent. Second-generation 8mm Mausers, after 1905, were all made for this new round, and many earlier guns were also re-bored

Figure 3: Three German infantrymen with Mauser Model 1898 carbines in a posed shot, probably taken during the winter of 1914. The full-length infantry rifle proved too unwieldy for trench warfare, so production was switched to the shorter carbines instead.
Internet photo in public domain.

or re-barreled for it. All Model 1898 8mm Mauser Rifles and Carbines produced for use in both World Wars chambered the new, .323 diameter Spitzer round. You could fire the old, "Cromwell" 1888 .318 rounds in the new 1898 .323 guns, but why would you want to? "Uber-wobbler" to the max, the small bullet, if fired in the large bore, would gyrate through every axis except the one leading to its target. And, when deadly dangerous stupidity and brute force overpowered safety and common sense, if new .323 rounds were crammed into old, .318 guns, overheating, squibbing, and self-destruction were inevitable results.

Once the Mauser designers produced the Model 1898, they stopped fiddling with it. In their opinion, the design was now perfect. Most serious shooters since then have agreed with them. One who did so was President Teddy Roosevelt, who, like Grandpa Dillon, had come up against troops firing 7mm

Spanish Mausers on the battlefield. One of TR's pet projects was the U.S. 1903 Springfield, a blatant copy of the Mauser, and the superlative .30-06 round, stepchild of the 8mm. But this is a story that must await yet another future **Blue Press** issue. The long-barreled infantry

Gewehr 1888 Mannlicher and 1898 Mauser rifles, after the initial weeks of WWI maneuver during the Summer of 1914 degenerated into the trench stalemate, were unfortunately too unwieldy for such cramped, confined use. So, from 1914 onwards, most Model 1898 guns were made as "trench carbines," with barrel lengths reduced from 29 to 22 to 24 inches. Although identified as *Karabiners*, these were not true cavalry/field artillery "carbines," just shorter-barreled infantry rifles better adapted to trench warfare. They nevertheless retained cavalry/horse artillery features like "eared" front-sight protectors and down-turned bolts over rectangular stock cutouts, both necessary concessions to horse-scabbards.

After "sporterization" Grandpa Dillon's 8mm Mauser became a favorite deer-killer, and a fair number of Northern California muley bucks fell to it (Figure 4). The homemade saddle gun reposed inside a leather, mail-order, horse scabbard. It hung on the wall when not bouncing around under the seat of the family Dodge Brothers Touring Car or being pointed at deer out in the Coast

Range. Both little Billy and his dad shot WWI surplus German military Spitzer ammo in their Mauser carbine. This was because the few American manufacturers producing 8 x 57 ammunition in the 1920s only made a single, compromise, load which could be safely fired in both the 1888 .318 and the 1898 .323 guns. Predictably, it worked poorly in both. Granddad never shot such "wobblers," for he had hauled many thousands of rounds of German 8 x 57 milspec Spitzer ammo back to the 'states in 1919. This was not just for his own use, but also for many Army colleagues, also banging away on Pacific Coast military and civilian ranges with captured "8-mil" Mausers throughout the 1920s. There had been plenty of available cargo space on the *Santa Rosa* for palettes of captured ammunition.

I have loaded light, medium, and heavy bullets to fire in granddad's old saddle gun: 125-, 150-

and 175-grain Spitzers, and gotten reasonable accuracy from all three. In my opinion, the 125s are too light. The heavy, 175-grain, bullets produce rounds closest to the original German military 180-grain loads developed for its 8mm belt-fed machine guns, like Grandpa Dillon's captured 1917 water-

Figure 4: A six-point muley buck taken with Grandpa Dillon's 8mm Mauser saddle gun near Point Reyes Station, Marin County, California in 1925. Fourteen-year old Billy (who later became an FBI agent) stands at right, ten-year old Jack (a future WWII U.S. Army Mustang Colonel), and seven-year old Gene (the only Dillon to ever enlist in the U.S. Navy) at their repose in front of the family's Dodge Brothers touring car. The youngest of the four Dillon boys, Richard (later a WWII U.S. Army enlisted man, and this writer's father), only a year old, was at home, so is not pictured. W.T. Dillon photo.

cooled, tripod-mounted Spandau, yet another story for a future issue of **The Blue Press**. The most consistent accuracy (and only moderate probability of shoulder dislocation) comes with the 150-grain Spitzer ahead of IMR-4895, which – loaded a little light – still gives tolerable speeds in the 2500 fps range.

The premier historical institution in our nation's capital may have thrown away tons of battlefield trophies bought and paid for with American blood and American lives, but the Dillon family will never do so. Granddad's 8mm Mauser saddle gun, issued to enemy forces a hundred years ago, will be protected and preserved forever. For generations to come it will remind us of the first of two successive American triumphs over the supposedly unbeatable German war machine. The Huns had stymied our WWI allies for three long years until American soldiers like Grandpa Dillon flooded onto the Western Front, fought the enemy to a standstill, and finally ended the fighting "over there." The family saddle gun still reminds us of their sacrifice.

101 Classic Firearms by John Marshall ⁸³

Dillon Precision announces the release of John Marshall's new book **101 Classic Firearms: A Chronological Foray into the Golden Years of Firearms Development**, a compilation of the author's popular articles appearing in **The Blue Press** since 2007. **101 Classic Firearms** is sure to be a welcome and prized addition to the library of any serious firearms aficionado.

Published by Dillon Precision, and printed and bound in the USA, **101 Classic Firearms** is a high-quality full color 11.5" x 9" hardcover with 224 pages packed full of insights and history on

some of the world's most important firearms. About the Author: John Marshall is an accomplished photographer and freelance

writer whose articles have appeared in **The Blue Press**, **Gun Digest**, **Guns & Ammo's Handguns**, and **American Gunsmith**. An expert on firearms, he is also a member of the Remington Society of America, the Smith & Wesson Collectors Association, the Smith & Wesson Historical Foundation and the American Gunsmithing Association. He is also an endowment member of the National Rifle Association.

Price: L85-40133 \$29.95, Autographed L85-97130 \$34.95

Competition Reloading with Brian Enos guides you through a complete step-by-step reloading process for IPSC, Steel Challenge and NRA Bianchi Cup style shooting.

Using a Dillon Precision XL 650 reloader with CP brass and CP bullets, Enos demonstrates proper reloading techniques for the most popular loads used by the top shooters. Enos is, of course, a champion himself, winner of the Masters Competition, the NRA Bianchi Cup and a top contender in the USPSA for many years. Run time: 80 minutes.

Making Ammo: A Beginner's Guide to Handloading by Kyle Lynch – Ammo shortage? Not anymore! Learn a new hobby that will save you money and ensure that you always have enough of the right ammunition for your shooting needs. This guide offers you an opportunity for first hand information from an experienced reloader as he takes you through the reloading process. Examples explain what works and what doesn't. If you are new to reloading or want to understand the fundamentals more fully, this guide provides simple step-by-step instructions.

L85-43270 \$23.95

Legally Armed: A Concealed Carry Gun Law Guide – Learn the basics of concealed carry and the laws associated with this astronomically growing group of self-reliant Americans. If you depend on a handgun for the protection of yourself or your family, arm yourself with knowledge, too. What's inside? What to consider before carrying a firearm • Protecting oneself: discharging a firearm in self-defense • What to do when interacting with Law Enforcement • Gun handling, practice and storage • State-by-state quick reference guide to carry laws where you live and travel.

L85-43269 \$14.95

Armed & Smart: A Beginner's Guide to Concealed Carry – If you are new to concealed carry and need a great resource for information, this is the book for you. This book covers all the basics a beginner needs to know.

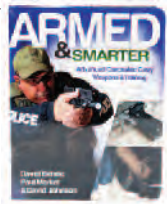

Before you make the decision to exercise your Second Amendment right to bear arms through concealed carry, you should consider factors like what type of gun is best for carry, when to carry a firearm, how to carry concealed, and why you should carry a concealed firearm.

We carefully cover handgun safety and the proper steps for using and caring for your firearm. Other topics include cartridge selection, accessories available, practice techniques, and range etiquette. **L85-43232 \$16.95**

Armed & Smarter: Advanced Concealed Carry Weapons & Training – Once you have mastered the basics for carrying your concealed firearm, you need a book to build on that foundation and hone your skills to those of an intermediate-level handgunner. After obtaining your concealed carry permit and securing a firm grasp of the responsibilities attendant to carrying a concealed firearm, it's time to focus on becoming an excellent marksman.

In **Armed & Smarter**, our authors prepare you, the shooter and gun owner, to handle and use your handgun responsibly. By the end of this book, you will understand the importance of strong habits and perfect practice.

Cavalry Arms Medical Trauma Kits

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics. The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll. The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.
