DESIGNED WITH THE TOUGHEST STANDARDS IN MIND BUILT TO PERFORM IN THE HARSHTEST CONDITIONS

**RUGER
AMERICAN
PISTOL**

Anything Else Would Be Un-American.™

Designed with the latest U.S. Military standards in mind, the **Ruger American Pistol** is built to perform in the harshest conditions. A true American innovation, this pistol was developed through a rigorous "Voice of the Customer" process—where numerous law enforcement and military trainers, firearms experts, distributors and retailers provided input, feedback and testing in the determination of the form, function and features of this firearm. The resultant new pistol is a revolutionary platform for Ruger, one that utilizes the combination of a recoil-reducing barrel cam (which is designed to better spread recoil energy over time) with a low mass slide, low center of gravity and a low bore axis to provide an unparalleled shooting experience.

Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

Which Dillon is Right for YOU?

Page 8

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550B

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls for each ear
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

“What?”

(and other quotes from dedicated shooters)

By Peter Caroline

Somewhere in my files, I have an ancient report from my nursery school teacher, which states, “Peter has a psychological deafness. He hears only what he wants to hear.” Some years later, after Army basic training, I had a genuine hearing loss, derived from firing an M1 Garand rifle without the benefit of hearing protection. At the time, we basic trainees were discouraged from using cotton balls, cigarette filters or any other form of hearing protection on the range. It was deemed unmanly by our training cadre, and we lowly E-1s were not encouraged to offer any form of dissent.

When I was assigned to Ft. Belvoir, Virginia, I was drafted into the post pistol team, despite of my lack of previous handgun shooting experience. For two weeks, I spent eight hours each day at the indoor range with an instructor and a very worn pre-war Woodsman, developing some degree of proficiency. In the spring, we moved outdoors and I was instructed in the use of a WWII-vintage 1911. I learned to choose the same pistol for each session, because each one of these veteran specimens shot to a different point of aim. At some point my instructor suggested that I acquire some ear protection. I remember that the recommendation was something called “Lee Sonic Ear Valves.”

These were rubber earplugs that enclosed little metal cylinders that had a crude spring-and-valve arrangement, which purportedly closed when activated by a loud noise. They did seem to work after a fashion, and they were better than nothing.

From my early thirties on, I was a member of one or another gun club, and I shot fairly regularly...everything from .22 LR to .458 Win. Mag. Even though I did wear earmuff-type protection on the range, I developed a constant ringing or hissing in my ears. I remember, during an annual physical, my general practitioner asked me if I was bothered by tinnitus. I replied, “Oh, no. In fact, I rather enjoy it. It drowns out the voices in my head.” I had to assure him that I was kidding. Even so, I was starting to get into the habit of asking people to repeat what they said.

In 1995, we moved to Arizona, and shortly afterwards, I fell into bad company...shotgunners. Although I pleaded total inexperience with scatterguns, I was drafted into a group of Sporting Clays enthusiasts. Through some convoluted rule of handicapping, my weekly imitation of Mr. Magoo boosted our team’s overall score. Needless to say, my hearing was further compromised.

It did not get better. I was reviewing guns for *The Blue Press*... .44 Magnum, .50GI, .50 Beowulf, .50-95 Winchester Express, etc., etc. In

2012, I was invited to attend Shootists Holiday, four days of noisy Show & Tell at the NRA Whitington Center in Raton, New Mexico. There I met dozens of similarly acoustically challenged individuals...to paraphrase Monty Python, Knights Who Say "WHAT?" Those of us who wore electronic ear-muff-type protectors could maintain a decent conversational level of hearing on the range, but whenever there was a cease-fire and we removed our ear-muffs, we were all deaf as a haddock.

Throughout all of this, my long-suffering spouse had to endure repeating everything several times. I often had the TV turned up to room-shaking levels, which does nothing for domestic tranquility. This was more than a bit wearisome for both of us, so I made an appointment with a local audiologist. I had to go into a soundproof box and listen

through earphones to various words and then try to repeat them. Most of these, I flunked, particularly in the upper ranges. The remedy, as it turned out, was a pair of receiver-in-canal hearing

aids, which cost roughly as much as a pair of mint nickel-plated Colt Pythons. The good news is, I'm hearing a lot of things I wasn't aware of before, which is also the bad news; I have to learn to tune out a lot of extraneous garbage, like the refrigerator cycling or a cat snoring.

Today's shooters can take advantage of a lot of good ear protection, from simple foam earplugs to sophisticated electronic ear-

muffs (see pages 7 and 12). Even the most costly of these are a lot less expensive than hearing aids, so you can indeed spend your hard-earned money on more enjoyable things, like that pair of Pythons or a caseful of ammunition.

“There I met dozens of similarly acoustically challenged individuals... to paraphrase Monty Python, Knights Who Say ‘WHAT?’”

POINT-BLANK TO 300 YARDS

There's No Better Target. No Ricochet!

- **Safe**...no ricochets even at point-blank range
- **Portable**...lightweight, easy to set up and store
- **Durable**...long-lasting in all weather conditions
- **Accurate**...wireless hit counter tracks results

Ideal for military, law enforcement, shooting ranges and recreation. Perfect for sniper, handgun and rifle training.

BL 550 Dillon's Basic Loader

\$259⁹⁵

L95-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount L95-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550Bs

RL 550B ACCESSORIES

A. RL 550B CALIBER CONVERSION KITS

Contains: Shellplate, powder funnel and locator buttons. Available in all calibers; please specify caliber desired.

RL5-RL550B CON-

VERSION \$45.95 (Exotic calibers, \$55.95)

B. AUTO POWDER MEASURE SYSTEMS

Additional powder measures stay on the toolhead. Never change powder measurements again!

RL 550 Powder Measure **L95-20782, \$77.95 ea.**
Magnum Rifle Powder Bar **L95-21353, \$29.95 each**
X-Small Powder Bar **L95-20780, \$29.95 each**

C. DELUXE QUICK CHANGE ASSEMBLY

With a quick change assembly and a caliber conversion kit (SOLD SEPARATELY), you can convert in less than a minute. Complete with:

- Toolhead
- Powder Measure
- Powder Die
- Toolhead Stand

Price without Dies, **L95-22058, \$104.95**

Loading dies sold separately on Pages 34, 35 & 52.

D. POWDER DIES

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "bellling" adjustment.

L95-20064, \$11.35 each
Three or more, \$10.25 ea.

X-Large Powder Die, L95-21253, \$19.95 each

E. TOOLHEADS

Don't adjust dies when switching calibers. These precision tool holders hold your dies in perfect alignment, making caliber changes quick and easy.

L95-13909, \$22.95 each
Three or more, \$20.95 ea.

F. TOOLHEAD STANDS

The ultimate in convenience for keeping your reloading bench clean and uncluttered.

L95-22055, \$20.95 each
Three or more, \$18.95 ea.

G. 1" BENCH WRENCH

L95-10842, \$7.95 each
Two or more, \$7.10 ea.

H. RL 550B CASEFEEDER UPGRADE

Available for most pistol cartridges – will not work with rifle cartridges.

Includes: 4-Grade 5 Hex Bolts, 4-Lock Nuts, 4 Flat Washers, 4-Fender Washers, 2-Wood Screws.

L95-14355, \$5.49

Dillon Reloading Accessories

Dillon's Reloading Accessory Package Deals include: either Dillon's D-Terminator Electronic Scale or Eliminator Balance Beam Scale, a Dial Caliper, a Primer Flip Tray, a Bench Wrench, an 8 oz. bottle of Case Lube, a pair of clear safety glasses, a machine cover and the latest edition of the Lyman *Reloading Handbook*.

SDB (Balance Beam Scale)	L95-14482	\$182.95
SDB (Electronic Scale)	L95-14483	251.95
RL 550B (Balance Beam Scale)	L95-21143	181.95
RL 550B (Electronic Scale)	L95-22117	250.95
XL 650 (Balance Beam Scale)	L95-21430	197.95
XL 650 (Electronic Scale)	L95-22118	266.95

Dillon's Toolholders are available for your RL 550B, XL 650, SL 900, and Square Deal B, and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL 650 with Wrench Set	L95-11555	\$29.95
XL 650 w/o Wrench Set	L95-11554	18.95
RL 550 with Wrench Set	L95-11541	28.95
RL 550 w/o Wrench Set	L95-11543	17.95

Dipped Ball-End Hex Wrenches	L95-11483	17.95
One-Inch Bench Wrench	L95-10842	7.95
Square-Deal-Only Wrench	L95-19970	8.95

Dillon's Strong Mounts

increase your machine's "footprint" to over 10",

spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL550/XL650	L95-22051	\$48.95
XL650-only	L95-22052	45.95
Square Deal "B"	L95-22223	64.95

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550B and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL 1050.

Bullet Tray Kit	L95-22214	\$41.95
RL 1050 Tray Kit	L95-22215	41.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System
L95-97126 \$145.95

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

L95-16306 \$41.95

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Alum. Roller	L95-17950	\$45.95
Plastic Roller	L95-22183	40.95

Quick-Change Cover for use with powder measure. **L95-11143 \$14.95**

With Dillon's RL 450 Upgrade components, you can, either all at once or one assembly at a time, upgrade your RL 450 reloader to an RL 550B!

Dillon's Case Preparation Equipment

CV-2001
L95-20493
\$188.95

CV-750 L95-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator L95-20675 \$75.95

CM-500 Case/Media Separator L95-21045 \$47.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 L95-22047 \$213.95

Euro CV-750 L95-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **L95-13804** **\$8.95**
Case (20 pc.) **L95-20255** **\$135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **L95-13733** **\$8.95**
Case (20 pc.) **L95-20256** **\$135.95**

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) **L95-21375** **\$135.95**

Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.

15-pound bag **L95-13287** **\$23.95**

Ground corn cob polishing media – the best there is for that final polish.

10-pound bag **L95-13496** **\$15.95**

Super 1050/RL1050 Short Trim Die Toolhead

L95-62219
\$224.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. (NOTE: the Blue 1050 toolhead stand – Part Number L95-62200, \$49.95 – is not included.)

Rifle – It's the finest rifle enthusiast's journal available! Readers will benefit from its in-depth, technical emphasis on getting maximum performance, accuracy and reliability from their guns and ammunition.

Handloader – This is the original journal of ammunition reloading for those who reload centerfire and shot-shell ammunition or who cast bullets. It contains detailed information on loads for rifles, pistols and shotguns; along with ammunition performance and evaluations.

Dillon's New Rapid Trim 1500 Case Trimmer ²³

Dillon's RT 1500 shown installed on an XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer Assembly **L95-62164** is **\$329.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (Please see chart below). Replacement carbide cutting blades, **L95-13141**, are **\$19.95** each. Upper lock rings, **L95-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Dillon's NEW Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access,

has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

"Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

UM Tactical Universal Sight Mount and Holster System

UM Tactical has created a universal sight mount that will fit all pistols with a 1913 Picatinny rail. Although many sight mounts exist; what makes the unit produced by UM Tactical unique, is that it will mount and dismount from your firearm in under 30 seconds with no tools or gunsmithing. Once set up with your favorite scope or red dot sight, the mount and optic can be taken on and off your firearm and still hold the zero. This high quality mount is constructed from CNC machined aluminum and is finished in MIL-SPEC Type III anodizing.

UM Tactical's UMH3 Universal Holster attaches to the UM3 sight mount and not your handgun. This unique design is hand made and is constructed of thermoformed plastic (Boltaron).

BLADE-TECH™

“Revolution” Holster Series

Blade-Tech used its extensive knowledge of Kydex® holstermaking to bring you the Revolution line of holsters. Using a proprietary blend of polymers, Blade-Tech has engineered these holsters to offer lifetime performance in a wide range of conditions. The holsters won't become soft in extreme temperatures (over 300° F) and won't become fragile in low temperatures.

Dillon's Pistol Die Sets

Size Die

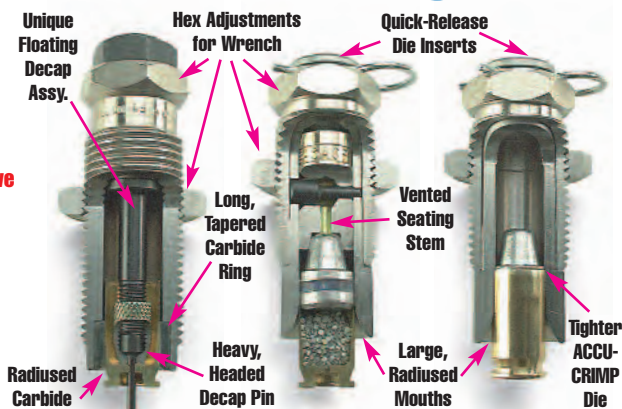

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

Spare Decapping Pins

Package of 10	R95-21528	\$5.75
---------------	-----------	--------

Dillon's Rifle Die Sets 35

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process.

Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

OUT OF THE

The SureFire XC1 on a GlockTriggers Skimmer-equipped Glock 19. Also shown are a Benchmade SOCP knife and Grey Ghost Gear Lightweight Assault Pack.

By Cameron Benz

It used to be that if you wanted a SureFire WeaponLight for your handgun, your only option was the X200/X300/X400 series. While fine on a duty or home-defense gun, they're a bit bulky for concealed carry. Enter the XC1 from SureFire. When I got wind SureFire had announced the XC1 at SHOT 2015, I was excited, especially since it was supposed to come in around 200 lumens. (Anyone else remember when 60 lumens were enough?)

The specifications were interesting. Overall weight, with battery, was listed at 1.6 ounces. Also specified was the aforementioned 200-lumen figure, with a run time of 1.5 hours before losing 10 percent of output. Length was listed as 2.375" versus the X300's 3.6". Width wasn't listed but my measurements put it at 1.10" across the head while the body is 1.06". Since the width of my Glock 19, according to Glock, is 1.18" that means the XC1 is literally narrower than the gun I wanted to put it on.

Initial impressions were positive, to say the least. I know I shouldn't have been surprised, considering SureFire's previous products, but I was

very impressed. The XC1 fit my Glock 19 perfectly, which is good, because according to SureFire that's the gun it was designed around. It very closely matches the length of the G19's dust cover, and it's only slightly wider than the slide. (The previous 1.18" width specified by Glock includes the controls which stick out slightly from the side of the gun.) Finish is the typical SureFire black hard anodized aluminum. So far, so good.

Before it arrived, I thought I'd probably need to purchase some lithium AAA batteries, totally forgetting that SureFire is good about including a first load's worth. The XC1 came with batteries. SureFire was also way ahead of me with the lithium flavor. Lithium AAA batteries aren't the cheapest things in the world, but they're still far cheaper than retail-purchased CR123 cells. Battery installs are simple. Just unscrew the cap next to the lens and the battery comes right out for replacement. Unscrewing the cap is easily accomplished with a penny.

The switch arrangement on the XC1 is a bit of a departure from SureFire's usual design. It has an ambidextrous momentary switch, activated by pressing downward. On the X300, this would

DARKNESS

The XC1 makes for a compact package when combined with a Glock 19.

The XC1 is a much smaller unit than previous SureFire WeaponLights.

The XC1's momentary on function is activated by pressing either of the ambidextrous switch's ears downward instead of forward as on the X300.

The XC1's lithium AAA battery is easily replaced with the aid of a penny.

result in constant On. Instead the XC1 has a cross-bolt-style switch for constant On. It's very unlikely someone would accidentally activate the constant On function as it has a firm engagement and is recessed into shallow scallops machined into the light body. Unlike the X200/X300/X400, the XC1's switch cap is not removable for replacement with a wire and pressure switch.

When the XC1 arrived, I quickly mounted it to my newest carry gun, a gray frame Gen-4 GLOCK 19 equipped with a GlockTriggers Skimmer trigger. The XC1's clamp arrangement consists of a couple of oval pieces with beveled edges. Be sure to use care, as it's easy to loosen the screw enough that the clamps drop out of their holes, and over-tightening them can mar things you don't want marred. After a little fiddling, I got it tightened on the rail and I was good to go.

Come on, darkness! The last time I'd been this eager for nightfall was as a kid on Halloween. Once it got dark, I took the light out into the yard for some testing. While I've heard some folks lament that the XC1's light output isn't bright enough for them, I don't see an issue. While it definitely isn't as bright as my X300 Ultra's 500 lumens, it's still bright, especially for something that will work so well on a concealed carry pistol. The XC1 has a broader beam than the X300 Ultra and also lacks the center hot spot. SureFire's now obsolescent X200B was only 100 lumens in a significantly larger package. Does anyone remember the X200 lights? The XC1 makes them look like a

25-year-old incandescent MagLite by comparison.

Testing has involved some practice light work at home, and firing the GLOCK 19 for 800 rounds of live ammo with XC1 attached, 500 of those at Matt Graham's Combat KillHouse class, and an additional 300 rounds of range practice. Unfortunately, we didn't get to do any darkness work in the Graham class (there was enough information to absorb without adding lights to the equation). So far, the XC1 has taken it all in stride.

The arguable low points are: (1) Installation/removal-wise this isn't a quick on and off light like the X300. On the other hand, it doesn't really need to be. (2) It has no provision for a remote switch, and while that may be a deal breaker for some, it's perfectly OK with me. (3) It doesn't have the blinding center hot spot that some might prefer to see.

As much as I like the XC1, I'd say it's a compromise light. Just like most concealed-carry pistols are compromises between concealability, capacity, and cartridge size, this light is a compromise between size and lumens. All in all, I'm extremely happy with this offering from SureFire. It's compact, reasonably bright, and uses easily obtained, comparatively affordable batteries. If you're a uniformed law enforcement officer, you may want the X300 or X400 for duty use since the light reaches further. If you're non-uniformed officer or concealed carrier and want a weapon mounted light source, the XC1 will be hard to beat, especially if your carry piece is a Glock 19 or equivalent size handgun.

CLASSIC FIREARMS: The Old M

By John Marshall

Many firearms enthusiasts regard the early Ruger Super Blackhawk .44 Magnum revolver as the finest single-action revolver ever built by Sturm, Ruger & Company. Some would go so far as to say it was the finest single-action revolver ever made by anyone. Certainly it was a magnificent and imposing handful. Finely polished, carefully fitted and painstakingly designed, it became Ruger's flagship handgun when it was introduced in 1959.

Bill Ruger had discovered the existence of the .44 Magnum cartridge in 1955 by a fluke. One of his friends had found five casings headstamped "REMINGTON UMC - .44 MAG". When he called Remington to inquire about it, he encountered a stone wall, as Remington evidently had a secrecy agreement with Smith & Wesson. In spite of this, Ruger managed to obtain a paper bag full of loaded .44 Magnum ammo from his friend Dewey Godfrey, then the director of marketing at Remington. Ruger corresponded with famed gun writers Elmer Keith and Charles Askins on his intentions to produce a .44 Magnum Blackhawk revolver, and complained that he could not obtain proof loads to test it. Although initially he thought he could use the .357 Magnum Blackhawk frame and the same size cylinder, he changed his mind when an experimental gun blew up. He prudently enlarged these components for the .44 Magnum version.

Soon Remington acquiesced and provided proof loads. Ruger

destroyed a Potter machine rest testing the guns, as the recoil was too much for it. The Ruger .44 Magnum Blackhawk was introduced in 1956, close on the heels of Smith & Wesson's .44 Magnum double-action revolver.

Although the Ruger .44 Blackhawk was popular, its lightweight aluminum grip frame, 6.5" barrel and traditional-sized grip brought many complaints about its vicious recoil. Accordingly, Bill Ruger began planning for an improved version that would solve these problems. In 1959, Sturm, Ruger & Co. would move into a brand new building in Southport, Connecticut. Its initial product would be called the Super Blackhawk. In June of that year, Ruger wrote to Elmer Keith: "We are sending

today...a prototype of the Super Blackhawk...I think you will like it tremendously...." Keith had provided a lot of input on the design of the gun, and many of his ideas were incorporated in the final product.

The new and heavier gun had an all-steel grip frame, replacing the previous aluminum version. An all-steel square-backed trigger guard was designed to allow more room for the knuckles of the firing hand, and the shape of the grip was larg-

er, quite similar to the Second Model Colt Dragon revolver. The cylinder was unfluted and had recessed chambers for the cartridge rims. The barrel was an inch longer, now measuring a standard 7.5". The wide trigger was grooved, and the hammer had a large grooved flange for easier cocking. The Micro rear sight was protected against damage by raised

Standard loading

"Load one, skip one, let hammer down."

empty chamber would position under

Model Ruger Super Blackhawk

shoulders at the rear portion of the topstrap. As with all Blackhawks, the spring-loaded firing pin was in the frame, and the hammer was flat-faced. As before, all springs were of the coiled variety. The fitting was impeccable, and a high-polish premium blue finish was applied. Of course, the gun could accommodate .44 Special rounds as well as .44 Magnums. The grips were varnished walnut (later replaced in 1963 with oiled walnut).

Elmer Keith wrote to Bill Ruger: *"The 'Dragoon' Ruger arrived. My hat is off to you. This is just about what I have wanted and worked for 40 years...and*

factory new condition with the original box and papers. All of the old model Super Blackhawks had traditional "4 click" 3-screw actions that mimicked the old Colt system. With this design, if the hammer was fully down, the firing pin protruded into the cylinder area. Thus, it was prudent for safety reasons to load the gun with five rounds only, leaving the hammer down on an empty chamber. Standard loading procedure was "Load one, skip one, load four, cock and let hammer down." Done properly, the empty chamber would be in the correct position

under the hammer. About 300 to 500 early guns among the

is by far the finest single-action sixgun ever produced to my way of thinking." Ruger's initial ads stated it was, *"A masterpiece of power and precision...The shape, size and mechanical design of this magnificent firearm have been perfected..."* The "Super B" was shipped in a red-clothed walnut presentation case, and initially sold for \$120. In 1961, when the factory producing the wood case burned down, that case was replaced by a white cardboard box. Because of its limited production run, this cardboard case has become an extremely valuable collector's item. At one time I had one of these, which was unfortunately lost in a household move, much to my chagrin. The gun illustrated here is one of the last "old model" Super Blackhawks, made in early 1973. The grip emblems reflect this, as they feature a silver eagle on a black background, the reverse of the black eagle on a silver background used previously. It's maintained in

the first 700 were fitted with 3/16" longer grip frames. During the 1965-1967 time frame and for a while in 1971 and 1972, brass grip frames were offered as an option. A limited number of uncataloged guns with 6.5" barrels in the serial number range from 24,000 to 26,000 were produced. In all, over 96,000 old models were manufactured.

In 1973, both Blackhawks and Super Blackhawks were changed to incorporate a transfer-bar ignition design. With this system, the hammer could be safely lowered on a loaded chamber. These guns are quickly identified by a "two pin" frame (instead of 3 screws) and a trigger that protrudes farther forward into the trigger guard. This change also messed with indexing for reloading, as there was no half-cock position on the hammer. Old model guns could be converted to the newer system at no charge, and the original parts returned for collector purposes. The cylinder now could be made free spinning for reloading simply by opening the loading gate. Purists howled, and a thriving business developed to "reconvert" the newer models to allow half-cock reloading with proper indexing. I was one of those purists, and I had my two "new model" Rugers so modified.

I love the old model Super Blackhawk. The action is smooth, the "4 clicks" sound impressive when cocking, the finish has been unmatched in the modern era, and the recessed chambers allow the back of the cylinder to mate up with the recoil shield perfectly with a minimal gap. It was and is a true quality gun and a beautiful work of art. My personal opinion is that the pinnacle of quality single actions was reached with the older model. I can live with the traditional older action, even if safety considerations demand that the cylinder be loaded with only five rounds. As the saying goes, they don't make 'em like this anymore. The old Super Blackhawks have achieved classic status, and rising values reflect this.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

L95-21894

\$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

RANGE TIME. ANYTIME.

Our Pistol Perfect bullet traps make range time, anytime a real possibility.

Available in 3 different sizes, each trap can handle handgun calibers up to .44 Magnum, and rifle calibers up to .223/5.56mm.

Our patented bullet trap technology ensures the shooter of a safe, clean, virtually maintenance free way to target practice. Lead is deposited into a collection pail, which can be recycled or sold. Talk about convenience!

Visit our website to see which Pistol Perfect Trap will work best for you.

SHOOTING TIP:

By Duane Thomas

The ability to do a fast, smooth draw from the holster can be a very important skill to have, whether you're carrying a gun for self-defense or as a competition shooter – or both. In this article, let's discuss a few little tricks that can considerably speed up the process.

Probably the most common error people make when approaching the draw is excess tension. I'm not saying not to push the speed, I'm saying that tight muscles have to overcome their own resistance before they can move; therefore doing a draw when you start from a tense state is going to be considerably slower than starting relaxed. But, you FEEL fast! Don't you? Of course you do, because when you start tense, you have to WORK to move, therefore you feel fast, you feel like you're really accomplishing something. Start relaxed, you feel considerably slower because the movement is effortless. This is one reason having an electronic timer is so important, because without the timer to show you that you're faster when relaxed than tense, you'd never believe it because the reality contradicts what your own body is telling you.

First hand contact to the gun should be very light. A common error is to put so much energy into placing your hand on the gun that the gun and the holster are driven downward at first hand contact. This is slow. It's excess movement. Also, your hand and arm, and the gun, have to overcome all that inertia before they can begin moving in the opposite direction: up.

Get both hands moving at the same time. While the master hand is moving toward the gun, the support hand is moving to accept the gun after it comes out of the holster. This is immensely faster than getting the gun out of the holster, then chasing the gun with your support hand as the gun moves toward the target. Get both hands on the gun as soon in the process as possible.

Memorize where the top of your support hand index finger contacts the underside of the trigger guard when it's in your perfect two-handed grip, which makes the gun point right where you want it when you bring it to eye level. When your support hand comes in to meet the gun on the draw, consciously make your first

Note that on this draw, both Thomas' hands are moving at the same time, the master hand is already on the gun, the support hand is coming in to belt level.

contact with the gun the top of your support hand index finger, right at that point on the trigger guard.

Where should your hands be, relative to your body, when they meet? Early-on in my shooting career I was taught what is commonly called the

DRAWING CLASS

49

First hand contact to the gun should be the top of the support hand index finger to the appropriate point on the underside of the gun's trigger guard.

of excess side-to-side gun movement at the end. But there are people in the world using that technique very, very well.

A common problem on the draw is a lot of movement of the front sight as your arms reach full extension. This means that, if you want to be fast, you have to fire the shot before the sights settle. If you want to be accurate on the first shot, you have to wait until the sights settle, and that's slow. These are both unacceptable. We want the gun to (1) go right where it should instantly, (2) have the sights settle, instantly. What's causing the problem is that your two hands are moving at different speeds, in other words, your support hand is being lazy and moving more slowly than the master hand, therefore

angle draw which consists of putting the support hand on your chest, drawing the gun high, having the hands meet around chest level, then punching the gun mostly straight out at the target. There are pluses and minuses to the angle draw, but the great negative – and unfortunately it's a big one – is that it's slow. You are adding a lot of unnecessary movement into the draw.

Honestly, the better at this whole “draw” thing I've gotten, the earlier in the process I've begun getting my support hand on the gun, and from that point the more straight line has become the movement of the gun to the shooting position. These days I actually put my support hand on my belt buckle during the draw, have my hands meet around belt level, then from there it's just a straight, about 45-degree angle up to eye level. At the very end there's a bit of horizontal movement as grip and arm position stabilizes, and the gun fires. Some people actually put their hand on their belt just to the side of the gun. I don't do it that way because having the hands meet off-center, to me, gives the draw a “coming in from the side” inertia as I'm moving the gun toward the target that leads to a lot

the master hand has to drive the support forward. This means that, when your arms hit the end of their strings, that differential has to smooth out and stabilize before the sights will settle.

In order to prevent that from happening, begin thinking of getting your support hand moving faster than the master hand, and PULLING the master hand forward on the draw. Now, that's not actually going to happen, but thinking of it that way tends to speed up your support hand, and get both hands moving at the same speed. Using this technique feels very different than the typical draw, there is no apparent front-to-rear pressure of the support hand on the master hand as they're both moving forward. Try it, you will find that suddenly your sights begin settling instantly, and not only that, your draw gets considerably faster because you're no longer actually pulling backward on the gun during the draw stroke.

The draw is one of the ultimate speed movements in any sport, any martial art. Refinement in a few key areas can pay big dividends in final performance.

Dillon's New Bench Wrench Fits new 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

1" Dillon Die Lock Ring	L95-14067	\$1.35

Comtech's STINGER

THE STINGER:

Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger today!

L95-19495 \$9.95

Take out your frustrations, and build your grip strength at the same time! Just think about...oh, socialized medicine, tax increases, high-capacity magazine bans, etc.

Note: These Come in Assorted Colors

Elzetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

ZFH1500 AR15 Flashlight Mount **L95-12020 \$29.95**

*Sand not included.

Dillon Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles. Dimensions: 66" x 27.75"

L95-18146 \$65.00

MILDOT MASTER

Become a master at using a Mil Dot reticle with this ballistic slide rule! Comes with a 24-page instruction manual.

Mildot Master® **L95-14762 \$29.95**

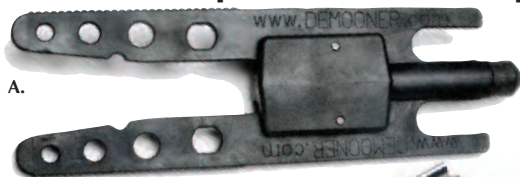

TARGET SPORTS® TACTICAL

This three-piece shooting bag set is an incredible value for the money! The bags are made of durable, water-resistant 600 denier polyester and provide a steady and solid shooting system for long guns and handguns. I filled the ones in the photo with walnut tumbling media and found them to be easy to fill and much lighter to carry than when filled with sand.

WHY THE .45

By Duane Thomas

I mourn the death of the .45 GLOCK Automatic Pistol cartridge. A truly excellent idea in theory, it was sabotaged by mistakes in the guns and loads offered for it. The basic idea was an answer to one of the great questions of the ages, "How can we fit a double digit number of .45 caliber cartridges into a pistol with a grip no bigger than a double-stack 9mm or .40?"

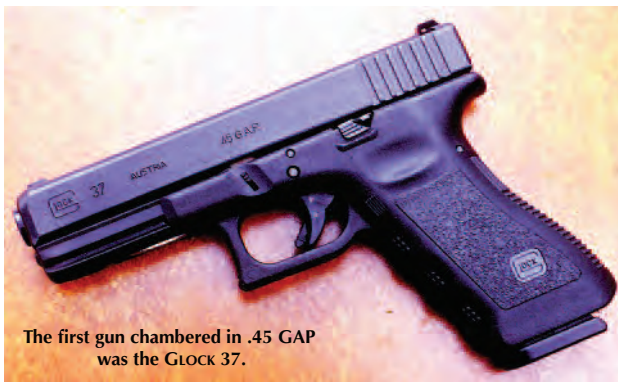

There had been, and continue to be, doublestack .45 ACPs. Unfortunately they tend to have grips way too large for the average hand. The .45 GAP basically loaded .45 ACP bullets into a shortened casing resulting in an overall cartridge length similar to a 9mm/.40, therefore it could fit into a medium-frame gun, versus the long .45 ACP which requires a large-frame gun.

The cartridge was developed by Speer, the guns (obviously) by GLOCK, the attempt being to replicate the huge success Smith & Wesson and Winchester had enjoyed with their hand-in-hand development of the Model 4006 and .40 S&W cartridge, respectively. Unfortunately, when I began testing .45 GAP ammo from Speer, from whence came the first loads, followed shortly by Federal and Winchester, I found a huge problem: the vast majority of it was loaded to .45 ACP +P velocities, not standard pressure .45 ACP. I mentioned to the ammunition development engineer at Speer responsible for spec'ing the .45 GAP, "My theory is you loaded the .45 GAP hot because you didn't want a repeat of the joke that 'wits' tossed around when the .40 S&W was introduced as a shortened and downloaded 10mm Auto, that '.40 S&W' stood for '.40 Short & Weak.' You didn't want anyone saying that .45 GAP was wimp .45 ACP." His reply was, "That's exactly right."

Unfortunately, when you combined a .45 ACP +P power level with the light weight of the GLOCKS

chambered for it, the .45 GAP swiftly developed a reputation for nasty recoil. This is understandable, since you were firing ammo generating around a 200 power factor (Major pf is 165) out of guns about the same weight as a Lightweight Commander. Those few people firing GLOCK 37s chambered for .45 GAP came away from the experience with no desire to ever do it again.

Initially, the only load for .45 GAP I tested that offered standard pressure .45 ACP instead of .45 ACP +P ballistics was the Winchester 185-gr. Silvertip. That was a nice load. Sadly, everything else kicked like a mule. Since we were loading .45 caliber bullets into

The first gun chambered in .45 GAP was the Glock 37.

a cartridge casing shorter, therefore with an interior volume considerably smaller, than .45 ACP, the .45 GAP was not the low pressure, slow pressure spike proposition that .45 ACP is, but a much higher pressure cartridge, with a much faster pressure spike. Thus even in its lighter loadings it was snappier than .45 ACP. In order to contain the higher pressures, the casing had a much thicker

web, which strengthened the casing (.45 ACP is actually a pretty weak casing, in the overall scheme of things) but cut into internal case volume even further.

It also didn't help matters that, in order to get that thicker web, the point inside the short .45 GAP casing where it began tapering in to form the web occurred high up enough that it wasn't possible to load 230-gr. bullets without bulging the

casing. The heaviest bullet weight that could be loaded into .45 GAP, at least to start, was 200 grains. This led certain gunwriters to moan and whine that .45 GAP couldn't be loaded with "full weight" bullets. It's worth noting at this point that John Moses Browning originally designed the .45 ACP around a 200-gr. bullet, it was only increased to 230-gr. at the Army's insistence, so John Browning himself thought a 200-gr. bullet in .45 caliber was quite sufficient.

The goal with .45 GAP was to produce a .45 caliber cartridge about the same overall length as 9mm or .40 S&W, and considerably shorter than .45 ACP. As this layout shows, the attempt was successful.

GAP FAILED

63

Eventually Winchester did figure out how to load 230-gr. bullets into .45 GAP, and .45 GAP hardball was, like their Silvertip, also a standard pressure load. Winchester seemed to have a focus on producing .45 GAP loads with easily controllable recoil that escaped Speer and Federal. Sadly, Winchester 230-gr. hardball was the single least accurate load I ever tested in .45 GAP. We're talking around 12" 5-shot groups at 50 feet from the bench.

I have to mention, GLOCK used to send out this little flier titled *The GLOCK Report*. I must admit to an inordinate amount of amusement when, in one issue, they touted the fact that professional shooter Dave Sevigny, who at the time was shooting for GLOCK, had taken a GLOCK 37 out and won a match with it "using factory Winchester Silvertip ammo," like that was hard kickin' ammo, natch. At which point I thought, "Yeah, I'll bet he did. If I had to shoot a GLOCK 37 in a match, and I didn't want to handload .45 GAP, I had to use factory ammo, I'd be shooting Winchester Silvertips, too, because that's the only factory load that has decently light recoil AND decent accuracy."

So those were the problems with the ammo. The guns also had their share of issues. The initial idea was to chamber .45 GAP in guns dimensionally identical to the GLOCK 17. Such guns were shown at trade shows to great interest. By the time the GLOCK 37, the gun first chambered in .45 GAP, hit the shelves, that idea had gone the way of the dodo. GLOCK was concerned that snappy, heavy .45 GAP recoil would swiftly begin to batter guns fitted with G17-size slides, so decided to add weight to the slide not by making it longer, but by making it wider. Since the entire idea behind the cartridge was to fit .45 caliber rounds into a frame the same size as a 9mm or .40 (the GLOCK 37 uses the same frame as the GLOCK 17/22/34/35/etc. - really, they come out of the same molds and everything), you wound up with a slide considerably wider than the frame to which it was mounted. Therefore, shooters wouldn't be able to operate a stock, low profile, flat-to-the-side-of-the-gun GLOCK factory slide release because the slide would overhang the release, so much so you couldn't get your thumb on it.

GLOCK's solution (I use the word ironically) was to install a wider, extended slide release. Unfortunately that meant the gun became incompatible

with anyone using a straight thumbs grip (and most good shooters do) because you'd either wind up with the heel of the support hand pressing up on the fat slide stop, leading to premature lock-back with rounds still in the magazine, or the master hand thumb would hold it down, leading to failures to lock open when empty.

The G37's wider slide caused other problems, too. It meant that police departments, or individuals shooters, already armed with service sized 9mm GLOCK 17s or .40 S&W GLOCK 22s would have to buy new holsters, instead of simply using what they already had. This removed what was going to be one of the gun/cartridge's huge selling points: that it could fit into the same holsters as a GLOCK 17/22.

Also the magazines were problematic. Rather than a true doublestack magazine, GLOCK fit ten rounds of .45 GAP in a magazine no wider than a 17-round 9mm GLOCK 17 mag by going for a "semi-staggered" ammo stack. Unfortunately (a word we wind up using a lot when describing the .45 GAP), fitting 10 .45 caliber cartridges into a magazine the same size as a G17 left NO compression/spring slack, making magazines extremely difficult to snap into the gun with the slide forward. Really, to seat a full magazine into a GLOCK 37, you pretty much had to lay the gun on the ground balanced butt up, then stand on the magazine.

When fully loaded, GLOCK 37 mags were useless for

doing a slide forward speedload. In order to do so, you had to download the mags to nine rounds. That's only one more than a 1911 running a singlestack 8-round mag. When your fat, double-digit .45 mags, if you want them to be useful for speed-loading the gun, are actually fat, single-digit mags, the .45 GAP loses a lot of its appeal.

So that was the .45 GAP. A great idea that fell victim to faulty execution. Today, other than a very few police departments that adopted and continue to use it, the .45 GAP is essentially gone. The GLOCKS 38 and 39, the compact and sub-compact .45 GAP, respectively, are hen's teeth, not that GLOCK 37s exactly litter the ground, either. It's really too bad. I always had a sneaking affection for that short, fat cartridge. It seemed to me like an autoloading equivalent to the .455 Webley. Sadly (another word we use a lot when discussing .45 GAP), these days it's almost as dead.

Duane's website is Self-Defense-Handguns.com 

Compare the lengths and widths of the slides, from left to right, of the Glock Models 17 (9mm), 21 (.45 ACP), and 37 (.45 GAP).

Extra Loading Data Labels, 195-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Swab-its® - A Swab for Every Job!

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!"

The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam tip is a plastic jag sized for a tight bore fit which provides for the uniform appli-

cation of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

Gun-tips® 3" Precision Tip foam swabs are reusable. 24-count value pack. **L95-15345 \$9.99**

Gun-tips®

Gun-tips® Extended Reach Firearm Cleaning swabs by Swab-its® revolutionize the way you clean your gun. The foam tips are lint free, reusable and ideal for cleaning trigger assemblies, slide rails, springs, extractors and anywhere else space is tight. 24 per package.

L95-12583 \$9.99

Bore-Whips™

Bore-Whips™ .17 and .22 caliber (pictured) by Swab-its® are ideal for air rifles, rimfires or any other .17 or .22 caliber firearm that's difficult to clean from the breach. The foam tips are reusable and the handle functions as an empty chamber indicator.

-----------------	------------------	---------------

Snake Oil is a derivative of an FDA certified medical lubricant used in high-speed medical drills.

- Provides a film that separates and protects moving parts, for smoother operation and increased efficiency.

- Contains no evaporants and has a film affinity in excess of two years.

- Reduces the collection of dirt, dust and other contaminants.

- Performance in extreme conditions is unparalleled.

4 oz. **L95-19370** **\$11.95**

Sweet's Australian 7.62 Solvent

easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

L95-13128
\$12.95

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is used in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	L95-15571	\$7.95
Slide-Glide Lite	L95-15572	7.95

Micron UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

L95-75125 **\$9.95**

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

Dewey's AR-Link Cleaning

Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

ADCO SUPER THUMB®
Offers models for popular centerfire pistols and 10/22 style magazines. **ST1** is for 9mm and .40 caliber Beretta, Browning, Ruger, SIGARMS, S&W, etc. In addition, the ST1 has interior rails and grooves to accommodate Colt Government magazines. **L95-18607 \$7.95**
ST2 is for GLOCK and Para-Ordnance magazines. **L95-18608 \$7.95**
ST3 handles virtually all centerfire, single-column magazines. **L95-18609 \$7.95**
ST22 is for Ruger 10/22 rifles. **L95-18610 \$7.95**
STJR is for Ruger, Browning, Colt and High Standard .22 pistols. **L95-18611 \$7.95**

California Competition Works' Magazine Storage Sleeves make it easy to organize your pistol magazines. The optional I.D. Tag/Hanger makes it less likely that you'll show up at a match with the WRONG magazines!
Four-Magazine Storage Sleeve **L95-19226 \$14.95**
Six-Magazine Storage Sleeve **L95-19227 17.95**
Magazine Sleeve I.D. Tag/Hanger **L95-19476 1.95**

Adjustable Target Sight for 1911s

This **Adjustable Target Pistol Sight** is precision machined and fits in a standard "Bomar slide cut." Yeah, the services of a gunsmith are required to cut the slide (unless your 1911 pistol already has a Bomar cut) but the results are worth it. **L95-18210 \$53.95**

Secure Firearms Products' Universal Spring Tester will help you determine if the recoil spring in your pistol needs replacing, and you'll save time and money by testing and organizing loose recoil springs in your shooting bag. **L95-15305 \$39.95**

MAGPUL 1911 Grip Panels feature reinforced polymer construction and a unique diamond-shaped cross section to prevent twisting in the hand. They also have an aggressive mag-release cut out and are compatible with ambidextrous safeties. **L95-43237 \$19.95**

BURRIS

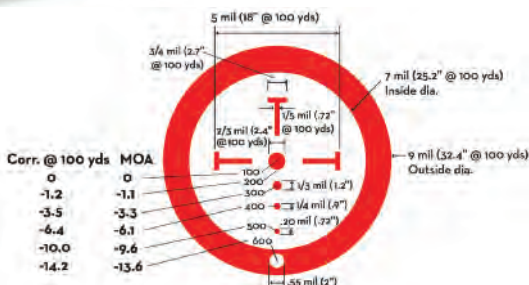

MTAC 1.5-6x42mm

The resilient MTAC 1.5-6x42mm riflescope is tough, with superb, glare-resistant glass and a sleek, snag-free profile. This compact model is perfect for 3-Gun, close quarter battle (CQB), or big-game stalking. With its high-performance glass, solid 1-piece tube, and internal double spring-tension assembly, this MTAC Riflescope can handle the harshest shooting environments.

And it's guaranteed by the Burris Forever Warranty™.

The fast-action Ballistic CQ™ reticle was designed for competitive shooters and law enforcement and military operators. The low-magnification, bright, fast-action reticle also serves dangerous game hunters well.

A circular, center "donut" provides ultra-fast engagement at close distances, and smaller reticle dots provide

trajectory compensation out to 600 yards for the 5.56 and 7.62 cartridges. The illuminated reticle gets you on target faster in any lighting condition and increases accuracy when the target is dark.

Elevation and windage dials are calibrated to 1 click = 0.5 MOA; both can be reset to 0 once the scope is sighted-in. The eye relief is generous – up to 4" – for comfortable shooting.

The scope features an ergonomic power ring for easy grip and quick power setting changes; finger-adjustable MTAC mil-rad target knobs for easy precision adjustments; and a rubber-coated eyepiece provides protection, comfort, and style.

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

L95-19671 \$29.95

By Gus Cotey

One of the more interesting military surplus rifles available today is the 1930 variant of the M1891 Russian Mosin-Nagant bolt-action rifle, more commonly referred to as the 91/30. These rifles have flooded the American market for several years now and provide their owners with interesting historical artifacts capable of respectable performance at the range or in the field. Surplus and commercial ammo is readily available, as are reloading dies and components for handloaders. While considered obsolete for frontline use for many decades, this firearm is still being used in hotspots today. Before I discuss my experiences with a pair of these rifles, a little bit of history is in order.

Disastrous battle outcomes as the result of single-shot-rifle-armed troops of the 1870s being engaged by enemy troops armed with rapid fire repeaters did much to reshape the thinking of military planners throughout the world. In the US, the defeat of one Lt. Colonel George Armstrong Custer by Lakota and Cheyenne warriors at Little Bighorn is well known. In this case, many of the Native Americans were armed with Henry and Winchester lever-action rifles with which they soundly routed Custer's 1873 Trapdoor Springfield carbine-armed US Cavalry troopers.

On the other side of the world, a similar outcome befell the Imperial Russian Army during the Russo-Turkish War (1877-1878) which was armed with single-shot rifles; the Krnka 6-line rifle and the more modern Berdan No. 1 and No. 2, cal. 10.75 x 58R, 4.2-line rifles (a "line" is an older Russian unit of measurement equal to 0.1 inch). At the Siege of Plevna (in Bulgaria), the

Ottoman Turkish troops were armed with single-shot under-lever Turkish M1874 Peabody-Martini rifles, cal. 11.43 x 55 Turkish for longer distances, but were also equipped with Turkish contract Winchester M1866 lever-action rifles, caliber .44 Henry rimfire. At ranges of 200 yards and under, the withering rapid fire delivered by the Turks with their Winchesters inflicted horrific numbers of casualties upon the advancing Russian troops and their Romanian allies. The Russians ultimately won the siege, as well as the war, but the Turks' employment of rapid fire at medium-to-close ranges delayed their victory by five months.

The memory of the Siege of Plevna prompted the Russian military to develop a repeater of their own based on their 4.2 line Berdan single-shot bolt-action rifle, but the project was unsuccessful and abandoned. With the advent of smokeless gunpowder in 1880s and the introduction of repeating military rifles utilizing this type of propellant to project relatively light, smaller diameter bullets at much higher velocities than those achievable with black powder – starting with the French cal. 8 x 50R Lebel rifle in 1886 – a rekindled interest in the development of repeating military rifles surged within the Russian military establishment. To this end, a commission intended for the testing and selection of magazine-fed rifles for Russian military service was set up and headed by General-Major N. I. Chagin. This commission examined and tested various rifle designs from a variety of nations. One promising designer was Captain Sergei Ivanovich Mosin, who from 1887 to 1889 worked on a turn-bolt design chambered for a powerful 7.62mm or .30

Two Tough Russian Veterans: A Pair of 91/30 Mosin-Nagants

caliber (3-line) cartridge which would become the famous 7.62 x 54R round.

Another designer submitting his brainchild to the commission was Belgian gunsmith Léon Nagant with a prototype .35 caliber (3.5-line) bolt action repeater. In 1891, both inventors' designs underwent testing and Nagant's design became the initial winner until intervention from higher-ranked officials, likely fueled by ethnic pride, declared the winner to be Mosin's rifle. The final issued product, however, did employ some Nagant-inspired features such as the bolt design, the charger clip (a.k.a. stripper clip) used to facilitate rapid reloading, and the magazine follower design.

In a very atypical departure from the norm, Mosin's rifle's designation did not include his name at first, but was officially named as "3-line Rifle Model 1891". The rear sight was calibrated in units called arshins, or Russian cubits (1 arshin = 28 inches). Mosin's name would not be included in the weapon's designation until after his death and after the Bolshevik Revolution ushered in the creation of the Soviet Union. According to Mosin-Nagant authority, Terrence W. Lapin, the Soviets renamed the rifle "Mosin-system 7.62mm Magazine Rifle, Model of 1891" and conspicuously omitted Nagant's name from the designation ("Mosin-Nagant" is primarily a term used in the West). The Soviets also changed over to the metric system for everything, including sight increments and caliber designations.

The 7.62 x 54R round for which the M1891 is chambered, as its designation indicates, is a rimmed or flanged cartridge in the same power

level as the 30/06, 7.92 x 57 Mauser, and 7.62 x 51 NATO (.308 Winchester). The original military load featured a 210-grain jacketed round nose bullet with a muzzle velocity (MV) of around 2,200 fps. In 1908, a pointed, lead core 147-grain FMJ pointed (spitzer) bullet Ball round with an MV of 2840 fps was developed to provide better long-range performance. Current Russian GI 7.62 x 54R "Light Ball" loads – featuring 147- to 150-grain pointed (spitzer) bullets – are available as surplus ammo. Heavy ball 182-grain surplus ammo originally intended for machinegun use (but useable in Mosin rifles) is available as well, as are commercial domestic and imported hunting and target rounds loaded with various bullet weights up to 203 grains. Note that most com-bloc surplus ammo has corrosive priming which necessitates immediate cleaning with an appropriate cleaning solvent after shooting.

The original Imperial Russian M1891 rifle evolved into several rifles and carbines based on its action. Of the full-length versions thereof, the Soviet 1930 variant was the last to be produced and is the best known and most commonly encountered Mosin-Nagant model imported into the United States today. This rifle, which is known in the US as the 91/30, features a shorter 28.7-inch barrel, as compared to the original M1891's 31.6-inch tube. Like the original model, the 91/30's rifling pitch is 1 turn in 9.5 inches with a right-hand twist.

In 1930, the Soviets switched to a round receiver for ease of production, but many of the 91/30 rifles produced up through the first half of 1936 feature the hexagonal receiver of the initial

80 M1891 due to being either the result of modernizing earlier M1891 variants or by being built from scratch with earlier hex receivers still in inventory. The 91/30 is full-stocked, equipped with a handguard, and employs a cruciform-profiled socket type bayonet that locks around the front sight base which is silver soldered onto the barrel. The tip of the bayonet is shaped like a sharpened screwdriver bit.

The 91/30 rifle's tangent rear sight is marked in meters and its markings range from 100 to 2000 meters in 50 meter increments. The front sight is a vertical post with a flat top and is surrounded by a protective hood. The front sight is mounted into a boss which is press-fitted into a corresponding dovetail machined perpendicular to the bore axis at the top of the front sight base which is silver soldered to the barrel. Horizontal adjustments are made by pushing the front sight right or left in the opposite direction that one wants to make a horizontal correction.

The 91/30 has a 5-shot, single-column fixed magazine which can be loaded with individual rounds or with a 5-round stripper clip. One unique feature of the M1891 system is the presence of an interrupter that prevents the rim of top round in the magazine from catching on the rim of the round below it during feeding. In the original M1891, the interrupter was integral with the ejector, but in the 91/30 the interrupter/ejector evolved into a two-piece unit. The extractor is a push-on type, as opposed to a controlled feed Mauser-type, and is press fitted into a dovetail on the bolt head. Ejection is accomplished with a post-type ejector similar in principle to that of Mauser-pattern actions.

To put the rifle on "SAFE", one pulls the cocking piece all the way back and rotates it

counterclockwise as far as it will go. Reversing this procedure readies the piece for firing. Safety manipulation of the Mosin family of rifles is most difficult and slow, especially with cold fingers, and makes me wonder if the safety was actually ever used during violent actions.

My first 91/30 Mosin-Nagant was purchased for a grand total of \$100, complete with cleaning kit, combination tool, bayonet, two-chamber oil/solvent bottle, and a double ammo pouch. Upon receipt of this rifle and noting its somewhat elegantly homely, but cool and very purposeful appearance, I did something that I never did with a gun before; I gave it a name and a proper Russian feminine one at that, Svetlana.

Svetlana is a late WWII example of a 91/30 made at the arsenal at Izhevsk in the republic of Udmurtia, located in the Ural Mountains. The barrel is stamped 1942 along with the Soviet Russian serial number and the arsenal's markings. The receiver has the importer's serial number as per federal law due to there being no serial number placed thereupon when the rifle was originally made. Being of wartime production, the rifle's round receiver is roughly milled with rather coarse machine marks throughout its exterior. In contrast, internal contact points with the bolt are properly well finished which allows for smooth operation. The butt portion of the right-hand side of the stock is marked with a square containing a diagonal

line running from the top left corner to the bottom right corner indicating that this rifle was refurbished. The bore is in basically good shape with clear, sharp lands, but somewhat darkened grooves. Using Russian 1970s and 80s surplus light ball ammo, this rifle is good for an average 5-shot 100-yard group size of around 3 inches with iron sights when I do my part.

On the left is the top view of the receiver and barrel chamber area of author's Izhevsk round receiver 91/30 Mosin-Nagant. Note circumferential tool marks on the barrel and longitudinal ones on the receiver as well as less than stellar execution of arsenal markings and characters on barrel, which are consistent with wartime expediency measures. The author's prewar Tula hex receiver 91/30 exhibits a much better finish and more crisply applied markings and characters.

Disassembled 91/30 Mosin-Nagant bolt components from top to bottom: bolt body; bolt connector; bolt head, note the substantial twin forward locking lugs and how the extractor resides in its dovetail; firing pin (striker); firing pin spring; and cocking piece.

The 91/30 was intended to be fired with the bayonet in place, as was its parent the M1891. In practice, the bayonet stayed in place all the time, except when entering a vehicle or during cleaning the weapon. With the bayonet fixed, Svetlana shoots 6 inches lower than without it, or 3 inches below the point of aim at 100 yards.

A couple of years after acquiring Svetlana, I bought an older, but more elegantly crafted hex receiver 91/30, which I named Natasha. This rifle was built at the Tula Arsenal and sports a barrel with a virtually perfect bore stamped "1930". Natasha has proven to be a more accurate rifle than Svetlana and often produces sub 2.5-inch groups at 100 yards from a rest with good ammunition. This rifle prints 2 inches low at 100 yards with 147-grain ball ammo with the sight set at 100 meters.

Both Svetlana and Natasha have shown themselves to be serious, reliable and functional weapons capable of accuracy on a par with the better examples of other military rifles of their time

period. They have rather heavy, somewhat creepy trigger pulls, and may not have the handling grace of rifles such as the Lee Enfield series, but they work well enough to get the job done effectively in competent hands and will serve their users under the most extreme climactic conditions.

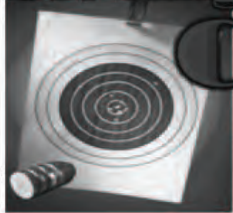

When handling firearms of military origins like the 91/30, especially those employed by sketchy regimes like the Soviet Union, one wonders just how, where, and when they were used. Were they used in legitimate national defense from hellbent invaders, or were they used to oppress those with different opinions than the power brokers in charge? Were they used in famous campaigns like the Battle of Stalingrad, or in some forgotten patch of land on the Russian steppes? However these weapons were used in the past for better or worse, it must be remembered that they are mere tools without their

own wills. The will to do right or wrong belongs to the shooter behind the gun.

Five rounds of Russian-made 7.62 x 54R Light Ball ammo loaded into a Mosin-Nagant stripper clip and ready to be pushed into the waiting magazine of a Mosin-Nagant rifle. The cartridges were made in 1973 at Factory No. 188. The silver-painted bullet noses identify them as having mild steel cores as per Soviet Russian convention. Lead-cored Russian Ball rounds have plain-tipped bullets.

Making Ammo: A Beginner's Guide to Handloading by Kyle Lynch – Ammo shortage? Not anymore! Learn a new hobby that will save you money and ensure that you always have enough of the right ammunition for your shooting needs.

This guide offers you an opportunity for first hand information from an experienced reloader as he takes you through the reloading process. Examples explain what works and what doesn't. If you are new to reloading or want to understand the fundamentals more fully, this guide provides simple step-by-step instructions.

L95-43270 \$23.95

Legally Armed: A Concealed Carry Gun Law Guide – Learn the basics of concealed carry and the laws associated with this astronomically growing group of self-reliant Americans. If you depend on a handgun for the protection of yourself or your family, arm yourself with knowledge, too. What's inside? What to consider before carrying a firearm • Protecting oneself: discharging a firearm in self-defense • What to do when interacting with Law Enforcement • Gun handling, practice and storage • State-by-state quick reference guide to carry laws where you live and travel.

L95-43269 \$14.95

Armed & Smart: A Beginner's Guide to Concealed Carry – If you are new to concealed carry and need a great resource for information, this is the book for you. This book covers all the basics a beginner needs to know.

Before you make the decision to exercise your Second Amendment right to bear arms through concealed carry, you should consider factors like what type of gun is best for carry, when to carry a firearm, how to carry concealed, and why you should carry a concealed firearm.

We carefully cover handgun safety and the proper steps for using and caring for your firearm. Other topics include cartridge selection, accessories available, practice techniques, and range etiquette. **L95-43232 \$16.95**

Armed & Smarter: Advanced Concealed Carry Weapons & Training – Once you have mastered the basics for carrying your concealed firearm, you need a book to build on that foundation and hone your skills to those of an intermediate-level handgunner. After obtaining your concealed carry permit and securing a firm grasp of the responsibilities attendant to carrying a concealed firearm, it's time to focus on becoming an excellent marksman.

In **Armed & Smarter**, our authors prepare you, the shooter and gun owner, to handle and use your handgun responsibly. By the end of this book, you will understand the importance of strong habits and perfect practice.

Cavalry Arms Medical Trauma Kits

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics. The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll. The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.

 NEAT
 BREAK

Clean your handgun at speeds in excess of 1100 fps with new Copper Fouling Eraser (CFE™) Pistol powder. Because the simplest way to wipe out fouling is to not let it build up in the first place.
