DESIGNED WITH THE TOUGHEST STANDARDS IN MIND BUILT TO PERFORM IN THE HARSHTEST CONDITIONS

RUGER AMERICAN PISTOL

Anything Else Would Be Un-American.™

Designed with the latest U.S. Military standards in mind, the **Ruger American Pistol** is built to perform in the harshest conditions. A true American innovation, this pistol was developed through a rigorous "Voice of the Customer" process—where numerous law enforcement and military trainers, firearms experts, distributors and retailers provided input, feedback and testing in the determination of the form, function and features of this firearm. The resultant new pistol is a revolutionary platform for Ruger, one that utilizes the combination of a recoil-reducing barrel cam (which is designed to better spread recoil energy over time) with a low mass slide, low center of gravity and a low bore axis to provide an unparalleled shooting experience.

Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

We READ Our Mail!

Saw your [Modern-Day Mare's Leg] article in *The Blue Press*, April edition. WAY TO

GO! These little pistols make a big dent when it comes to protection and security. I can't say enough about them. I always loved a short rifle. I've had a lot of time with a Thompson M1A1, a CAR-15 and I have a Winchester Trapper in .30/30. Getting back to your AR, nice choice. Thanks a lot. Have a good day and be careful out there.

Hank Williamson

I just finished reading your article in the latest *Blue Press* about your AR pistol (Mare's Leg, Pg. 36). I had a question about the mount that's pictured in the article. It looks like an Insight MRDS with the metal shield. It also looks like the factory mount on the receiver. My question is this: Is there a spacer between the mount and the MRDS? Do you have any details about it or where to get one? I have an MRDS with factory Insight mount and it would need a spacer to get it to the correct height for the application in your article. Been looking for one.

Chuck - chucker45@att.net

Chuck, you're right about the sight being an Insight MRDS, it's also their mount with no spacer. On their website, they still list the MRDS, but I can't find any accessories listed for the thing and it seems like their business has gone exclusively high-end military. That's why I didn't bother to mention the brand in the article. The best alternatives I could find are from C-MORE and Burris. Had I not happened to have the Insight MRDS on hand, I would have used one of those. - Mark

Yet another application for your great Dillon Case Lube. I wear leather shooting gloves even when competing in the rain. The gloves dry as stiff as cardboard. A thorough spraying, inside and out, with Dillon Case Lube's lanolin formula immediately restores their softness. Keep the good stuff coming.

Above: Heizer 7.62 x 39mm

Right: Llama .380 MicroMax

By Peter Caroline

A very wise person once told me, “You *can* have it all...just not all at once.” This is nowhere more true than at the SHOT Show, the annual firearms industry carnival, featuring 15 acres of hoplophile delights. Fortified by good walking shoes and a plentiful supply of naproxen sodium, I set forth.

My first stop is usually the Ruger (www.ruger.com) booth. They never disappoint. This year, they were introducing their own Silent-SR™ sound suppressor for .22 LR, .22 WMR and .17 HMR. Price is in the four hundred and something range. Very tempting. Their GP-100 revolver, previously in .357 Magnum only, is now available as a 10-shot .22 LR with adjustable sights. The new Ruger American pistol, offered in both 9mm Luger and .45 ACP, could easily be a serious candidate for our armed forces’ new handgun, if Ruger wanted the hassle.

Remember North American Arms’ (www.northamericanarms.com) Ranger break-open .22 WMR revolver? Several years ago, they made about 500 of them, but determined that it couldn’t be offered at an affordable price. Now, with a new

latch configuration, the project may be coming to fruition. Stay tuned.

I always stop by the Smith & Wesson booth (www.smith-wesson.com) to lust after the latest Performance Center goodies. This year, they were showing off a new popularly priced line of .22 LR semiautos, entitled the SW22 Victory pistol. These would remind one of the classic High Standard and Woodsman pistols in configuration, but are rendered in stainless steel, and feature picatinny-style rails, fiber-optic front and rear sights, one-screw takedown and interchangeable barrels.

IWI US (www.iwi.us.com) had their new TAVOR X-95 models on display. These are reconfigured TAVORS with a much lighter trigger pull (*Gott sei dank!*) and a more conventional, AR-type, magazine release placement. They also announced the introduction of a .300 Blackout conversion kit for the TAVOR...yet another excuse to buy a suppressor.

If you are of a certain age, you may recall the Llama pistols, 1911-inspired, in calibers ranging from .22 LR to .45 ACP. Eagle Imports (www.EagleImportsInc.com) was showing a full-size Llama MAX-1 1911 clone in .45 ACP and a neat

Left: Smith & Wesson Victory .22
Above: IWI TAVOR X-95

Above: Kimber K6S .357 Magnum Revolver
Right: Coonan .357 Magnum Compact

little .380 mid-size MicroMax that featured an ambidextrous safety.

Last year, Inland (www.inland-mfg.com) introduced a beautifully crafted WWII Inland M1 Carbine clone, in both standard and paratrooper models. This year, they were showing an "Advisor Model" M1 Carbine pistol with a 12" barrel, patterned after a conversion popular with U.S. military advisors during the Vietnam conflict. They also displayed an Ithaca-built M37 12-gauge Trench Gun, complete with heat shield and bayonet lug. Dandy fun!

For those of you who are into serious pain, Heizer Defense (www.heizerdefense.com) featured a single-shot pocket cannon in 7.62x39mm. For the fashion-conscious, there was even a .45 Colt single-shot with lavender accents.

Wonders never cease. Kimber (www.kimber-america.com) now makes a revolver. It's a six-shot, .357 Magnum double-action-only snubby with a no-stack trigger, concealed hammer and 1.39" diameter cylinder. The finish is polished stainless, and MSRP is \$899.

I stopped by the Remington booth (www.remington.com) and checked out their new RM380

double-action pocket pistol. So far, the reviews on actual production models have been very positive. The pocket .380 field is fairly crowded, but this new entry looks and feels right.

Coonan (www.coonaninc.com), notable for their .357 Magnum 1911 look-alike pistols, was showing off a new compact model .357, and has a .45 ACP full-size model in the works.

For serious collectors of combat knives, the Case WWII V42 Combat Knife might be the jewel in the crown. Case Cutlery (www.wrcase.com) now has a limited edition exact replica of this rarity, with authentic sheath and optional display cabinet. Price is in the mid-three figures, a small fraction of what the original would go for, if you could find one.

There have been any number of .22 LR conversion units for the 1911, ranging from downright horrible to tack-driving wonderful (and expensive). While I was hanging out at the Dillon booth, I had the opportunity to talk to the people at Nelson Custom Guns, LLC (www.NelsonCustomGuns.com). They have a competition-grade .22 conversion unit that delivers super accuracy and actually

BL 550 Dillon's Basic Loader

\$259⁹⁵

N06-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount N06-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550Bs

Square-Deal-Only Wrench	N06-19970	8.95

Dillon's Strong Mounts

increase your machine's "footprint" to over 10",

spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL550/XL650	N06-22051	\$48.95
XL650-only	N06-22052	45.95
Square Deal "B"	N06-22223	64.95

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550B and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL 1050.

Bullet Tray Kit	N06-22214	\$41.95
RL 1050 Tray Kit	N06-22215	41.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	N06-97126	\$145.95
----------------------	------------------	-----------------

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	N06-16306	\$41.95
--	------------------	----------------

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Dillon's Case Preparation Equipment

CV-2001
N06-20493
\$188.95

CV-750 N06-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator N06-20675 \$75.95

CM-500 Case/Media Separator N06-21045 \$47.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 N06-22047 \$213.95

Euro CV-750 N06-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **N06-13804** **\$8.95**
Case (20 pc.) **N06-20255** **135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **N06-13733** **\$8.95**
Case (20 pc.) **N06-20256** **135.95**

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) **N06-21375** **\$135.95**

Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.
15-pound bag **N06-13287** **\$23.95**

Ground corn cob polishing media – the best there is for that final polish.
10-pound bag **N06-13496** **\$15.95**

On this month's cover, we're honored to feature the first ever Six-Division USPSA National Champion, Julie Golob. A champion, author, veteran and mom, Julie is one of the most accomplished professional shooters in the world with more than 120 championship titles in international, national and regional marksmanship competitions in seven different shooting disciplines. A veteran of the elite U.S. Army Marksmanship Unit, this former U.S. Army Female Athlete of the Year and AMU Athlete of the Year serves as the captain of Team Smith & Wesson. Her list of titles includes the prestigious Bianchi Cup, Steel Challenge, USPSA, IDPA and IPSC competitions and SHOT Business Person of the Year. Julie is a dedicated ambassador and shares her passion for gun safety, shooting sports and hunting as an outdoor television personality, instructor and motivational speaker. Learn more and get links to her social media at JulieGolob.com.

The cover photo and photos on pages 48-49 are courtesy of Michael Ives and the National Rifle Association. This photo is courtesy of Matthew Skutnik and Smith & Wesson.

Super 1050/RL 1050 Short Trim Die Toolhead

N06-62219
\$224.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. *(NOTE: the Blue 1050 toolhead stand – Part Number N06-62200, \$49.95 – is not included.)*

Dillon's New Rapid Trim 1500 Case Trimmer ²³

Dillon's RT 1500 shown installed on an XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer Assembly **N06-62164** is **\$329.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (Please see chart below). Replacement carbide cutting blades, **N06-13141**, are **\$19.95** each. Upper lock rings, **N06-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Dillon's NEW Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access,

has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle Holsters' Conceal-Carry Performance Series

If Cowboy Action Shooting is your game, why not CARRY the gun you shoot the most? These holsters can be worn strong side, appendix carry or cross draw and are fully molded. Now also available for J-Frame S&Ws.

- 4-3/4" SA Colts/clones **NOG-11560**
- 4-5/8" Ruger Blackhawk **NOG-15765**

\$79.95

"Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. *Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.*

UM Tactical Universal Sight Mount and Holster System

UM Tactical has created a universal sight mount that will fit all pistols with a 1913 Picatinny rail. Although many sight mounts exist; what makes the unit produced by UM Tactical unique, is that it will mount and dismount from your firearm in under 30 seconds with no tools or gunsmithing. Once set up with your favorite scope or red dot sight, the mount and optic can be taken on and off your firearm and still hold the zero. This high quality mount is constructed from CNC machined aluminum and is finished in MIL-SPEC Type III anodizing.

UM Tactical's UMH3 Universal Holster attaches to the UM3 sight mount and not your handgun. This unique design is hand made and is constructed of thermoformed plastic (Boltaron).

BLADE-TECH™

“Revolution” Holster Series

Blade-Tech used its extensive knowledge of Kydex® holstermaking to bring you the Revolution line of holsters. Using a proprietary blend of polymers, Blade-Tech has engineered these holsters to offer lifetime performance in a wide range of conditions. The holsters won't become soft in extreme temperatures (over 300° F) and won't become fragile in low temperatures.

Dillon's Pistol Die Sets

Size Die

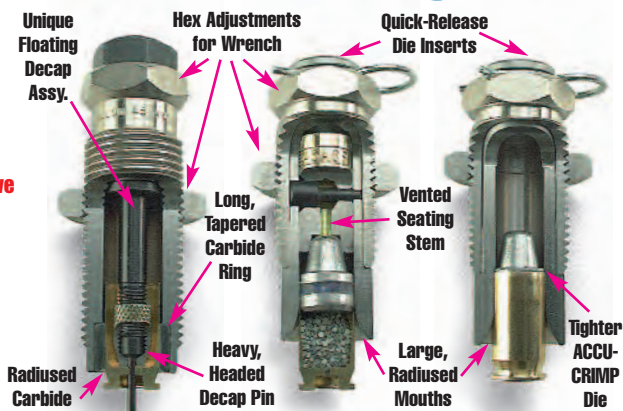

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets 35

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerance, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process.

Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

MISSION

By Cameron Benz

A tall, dapper man in a black suit walked up to me at my mailbox, handed me a pair of high-tech sunglasses, and walked away. Upon reaching the house, I put them on and an audio message began playing from the integral speakers. "Good afternoon, Mr. Benz. Your mission, should you decide to accept it, is to write up the Dillon XL 650 reloading machine from a new hand-loader's perspective. As usual, if you fail, the Secretary will disavow any knowledge of your actions. This message will self-destruct in five seconds." Upon hearing that last bit, I quickly ripped off the odd sunglasses and tossed them out into the yard where they exploded and left a scorch mark.

Somehow Mark Pixler (His Editorship) had learned I was going to buy a progressive reloading machine and suggested I write about the experience from my handloading novice point of view.

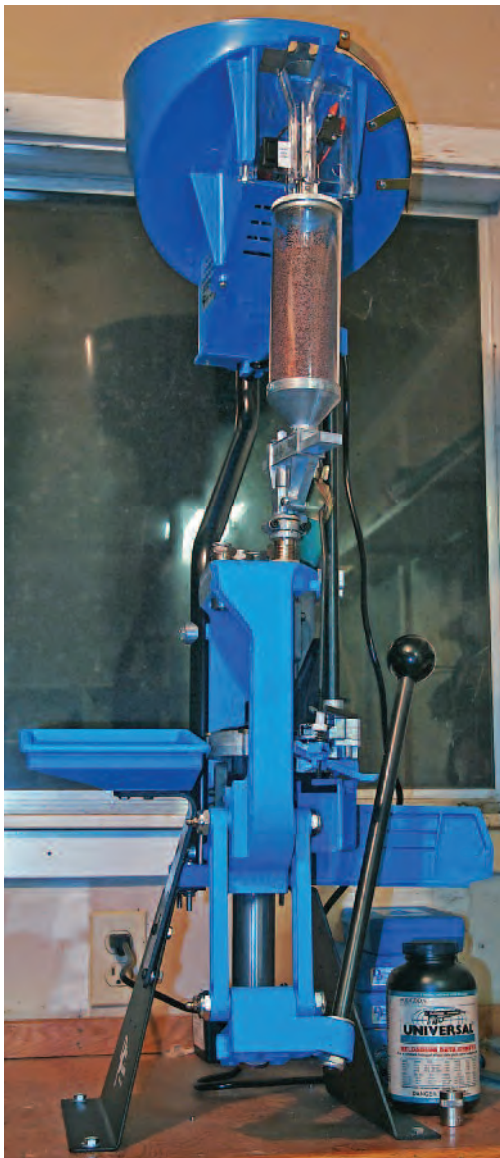

Up to this point, I'd read up on reloading and understood the basic concept. A friend of mine has two Square Deals (one for .45 ACP, one for 9mm) as well as an XL 650. I'd previously used his Dillon Square Deal to load some .45 ACP and his Dillon XL 650 to load 9mm. That same friend had offered to let me continue using his XL 650 if I wanted to get my own toolhead, however, I came to the conclusion it would be much easier to have my own reloading press in my shop space (located in my repurposed garage) at home.

I went for a progressive press right off the bat. My basic theory was that when I shoot, a typical practice session runs 250 rounds, and I do that several times a month. When you shoot that

much, the round count adds up fast. (With the exception of the previously mentioned, small number of .45 and 9mm handloads, I've always shot factory ammo, and when you're paying factory prices for that much ammo, the expense also adds up fast.) While some people say a new reloader should start on a single-stage press, I can honestly say I've never actually used a single stage and have no real interest in loading 250 rounds per session on one either. I decided I should start with an XL 650. I already knew how to use one; how hard could setting it up be?

When the Dillon boxes arrived, courtesy of FedEx, I took them down to my shop, spent a few minutes checking everything against the packing slip and then deciding where to put the machine. With that out of the way, I moved on to unboxing the Strong Mount and press. I attached the Strong Mount to the press base and used the base of the Strong Mount as a drill guide on my bench top. The instructions say to use a 5/16" drill bit, so if you drill the holes

slightly off you have some wiggle room to still fit the bolts through. I chose a smaller 1/4" drill bit instead. It would certainly be easy enough to enlarge a 1/4" hole to 5/16" should I be slightly

: XL 650

off, however the press base and holes through the bench lined up great.

Other than that, I followed the instructions. Yes, I actually read the instructions. I proceeded to follow directions and the assembly went pretty smoothly. I actually spent more time chasing down my tools than I did setting up the XL 650.

Now, let me suggest some tools to have ready when you do this yourself:

- A portable drill and 5/16" drill bit (or 1/4" drill bit if, like me, you're into precision);
- Large slip joint pliers (such as Channel-Locks, instead I chose a 1" ratcheting box end – a 1/2" drive ratchet with 1" socket would also work);
- Two 7/16" combination wrenches (a ratcheting box end can be handy here); and
- A 3/8" combination wrench.

The drill and drill bit are for drilling the mounting holes. The pliers or 1" wrench are for tightening the handle. Having two 7/16" wrenches will be helpful for tightening the mounting bolts. Lastly, the 3/8" combination wrench can be used to tighten the bullet tray bolts.

Once the machine was mounted and set up for 9mm Parabellum (I had also ordered .300 Blackout dies), I filled the powder reservoir with Hodgdon Universal powder and the bullet tray with X-Treme 147-grain RN-HPCBs, set and measured the powder charge, adjusted the case mouth bell, the seating depth/overall length, set the amount of case mouth crimp, and got to work. In short order the blue plastic ammo bin began to fill with cartridges that I loaded on MY very own Dillon XL 650.

My next mission, should I decide to accept it, will be to choose a powder for subsonic .300 AAC Blackout using Rainier Ballistics' new 180-grain plated bullet (soon to be available as a flat tip or hollowpoint) intended only for subsonic use.

There exists something of a myth that a novice handloader should start with a single stage press so they can learn each individual step and thus have a better understanding of the reloading process. That's a great theory, but honestly there's no reason you can't learn the same thing on a progressive reloader. You just have to understand what each operation does, how to set it up, and don't rush yourself.

How has it worked out for me? Excellently! I

had no apprehension at all. Dillon has great resources for their customers. I bought the very educational DVD along with the machine. The paper instructions (I do recommend reading them) were also helpful. If those fail you, Dillon's technical service line (1-800-223-4570) is awesome, as well. The customer service line phone people have been very helpful every single time I've called.

All in all, there's something greatly rewarding about deciding I want to go shoot on any given evening, and walking out to my shop to knock out 250 rounds of ammo in about the same amount of time it would take for me to go to the store and buy it. Not only that, but I can put together ammo that fits my needs instead of using whatever load the ammo factory thought I needed.

Did I mention the great instructions, the very helpful DVD, and amazing technical service line (1-800-223-4570)? If you're hesitant to step into the progressive reloading realm, don't be. Dillon will take great care of you. You won't be sorry. I'm not.

CLASSIC FIREARMS: Colt's

By John Marshall

It was not long after the United States adopted John Browning's Model of 1911 pistol that the quest for a similar pistol shooting inexpensive .22 rimfire ammunition began. The thought was that this type of pistol would make for much more economical training. In 1913, Springfield Armory and Colt's Patent Firearms Manufacturing Company worked on developing what they hoped would be a workable pistol. After much experimenting, it was finally determined by the military in 1927 that the idea was impractical and the project was dropped. The .22 Long Rifle cartridge was way too underpowered to work properly within the M1911 envelope. By the same token, Colt's remained interested in the idea. In 1930, the company solicited input from the public on the desirability of a .22 training pistol along the lines of the Government Model pistol. The response was quite positive.

In 1931, Colt's put the Ace pistol on the market. It had the same outward dimensions as the .45 Government model, but utilized a drastically lightened slide and a heavy barrel chambered for the .22 Long Rifle cartridge. The frame was the same as the Government Model. The action was straight blowback, with only the mass of the slide and the resistance of the recoil and hammer springs to keep the breech closed during firing. The magazine held 10 rounds, and the rear sight was the "Improved Ace Adjustable Target Sight" which was marginally larger than a standard fixed sight. The right side of the slide read "COLT ACE .22 LONG RIFLE." About 11,000 of them were produced.

The U.S. Army was interested enough to purchase 206 of these pistols through 1936. However, because the .22 cartridges of that era lacked enough power to consistently and reliably function the slide, they devoted no further attention to the idea. In 1941, the Ace pistol was discontinued.

In 1937, Colt's brought out its improved "Service Model Ace." This pistol's distinguishing feature was a floating chamber arrangement invented by David Marshall Williams, later to be known as "Carbine Williams" when he invented the short-stroke piston used on the U.S. M1 Carbine of World War II fame. The floating chamber allowed combustion gases to push back that sliding internal chamber with some energy, enough to give the slide a forceful kick and in the process provide a modest amount of felt recoil. The serial numbers on these pistols were prefixed by "SM." Externally it was similar to the Ace, but the slide was marked "COLT SERVICE MODEL ACE .22 LONG RIFLE." 13,803 were produced through 1945, most of which were purchased by the U.S. Army. Many of Army pistols were marked "US PROPERTY." Initially these pistols were blued, but at about serial number SM4840, Parkerizing became the standard finish.

In 1938 Colt's marketed its first conversion unit, which was in reality mostly the top half of a Service Model Ace. It was designed to allow owners of centerfire pistols the capability of shooting .22s using the existing frames of their pistols. The unit consisted of a slide marked "Service Model Ace," a barrel with the floating chamber, an ejector, slide lock, barrel bushing, recoil spring, 10-round magazine, box and instructions. These early conversion

.45 to .22 Conversion Unit

slides had Stevens adjustable rear sights, except for a small run with fixed sights, apparently made for the military 1938-1941. Also in 1938, a kit to convert a .22 pistol to .45 was produced and marketed. Production ceased on all conversion units in 1942. The .22 kit was re-introduced in 1947, but the .45 kit was not. Conversion kit slides were marked "CONVERSION UNIT", while the slides of the Service Model Ace pistols were not. Pre-war

conversion units were serialized in front of the rear sight, from U1 to U2000. Post-war units were numbered from U2001 to U2670, and then were produced with no serial numbers. Most of these will be found with Coltmaster (rather than Stevens) rear sights, identical to those found on Colt Woodsman Match Target .22 pistols and Officer's Model Special revolvers of that era. A few Service Model Ace pistols were made from parts produced during the war, but these were discontinued in 1949. In 1953, the Accro adjustable rear sight and slanted slide serrations were phased in on the conversion units.

In 1978, Colt's resurrected the Service Model Ace pistol, and continued manufacture of it until 1982. These post-war pistols with Accro rear sights are not considered as valuable as their pre-war predecessors. In addition to the standard adjustable-sighted conversions, there were about 3,000 fixed-sight conversion units with then-unusual vertical slide serrations made in the 1981-1983 time period.

A Colt Ace II conversion unit has been made in recent years. It has a very light aluminum slide and is designed to work with Series 80 pistols that have the firing pin safety lever and plunger.

A note is in order here on the slide lock levers furnished with the floating chamber units. These will be marked with the number "2." They should always be used when .22s are fired. While a standard .45 or .38 Super slide lock will work, these will eventually damage the nub on the .22 magazine follower that activates the slide lock on firing the last round. A replacement follower or magazine can be pricey.

Those units with the floating chamber will foul those chambers very quickly with standard velocity lead bullet ammunition. I personally have had much better results with high speed ammo using plated bullets. Remington Golden Bullets seem to work pretty well, and CCI Stingers (hyper-speed with a slightly longer case) do best in my experience. The bullet needs to be well down the barrel before the floating chamber starts back – otherwise sheared lead can muck things up and require vigorous scrubbing of the floating chamber and its seat in the barrel with a brass-bristle brush. Never use steel wool to clean these components; it can mess with critical dimensions and make matters far worse. Given the proper selection of ammo and correct lubrication/maintenance, the Colt conversion units do work quite well, and are an economical alternative to firing expensive .45 ammunition. These are classic devices that are well worth having. Pre-war units in particular have seen steady demand by collectors and ever-increasing prices. As always, an original box and papers are quite desirable. I get a great deal of satisfaction firing mine knowing that I'm saving money over .45 ammo with every pull of the trigger!

46 Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Berry's Mfg. Pan Sifter

N06-17519

\$9.99

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mms. Made in the USA and comes with a lifetime warranty.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

N06-21894

\$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

 **HODGDON**
 THE BRAND THAT'S TRUE

Julie Golob —

By Robin Taylor, Photography by Michael Ives

A permanent fixture on TV shows like “Shooting USA” and “Impossible Shots,” Julie Golob has a depth of visibility no other female practical shooter can match.

With more than 20 years as a pro, Julie’s on- and off-screen strength of character makes her a force to be reckoned with. She’s the only woman to win *ALL SIX* of USPSA’s national titles, and finds herself training to become the first ever (man or woman) to win all *SEVEN* when USPSA offers its first “Carry Optics” national title later this year.

“I’m really excited about Carry Optics,” she says. “And I’m lucky enough to represent a company with one of the best guns in the game.” (The M&P CORE.)

Julie’s a spectacular shooter with a wide range of pistols, but what sets her apart isn’t something physical – it’s strength of will.

I first met Julie *Goloski* (long before she became Julie Golob) as a teenage phenom headed for the Army Marksmanship Unit. Compared to other ladies, she wasn’t faster-moving, or stronger, or taller – or even particularly graceful – she was more intense.

Plain and simple, Julie *fought harder* than everybody else. Off the line she was “the girl next door,” but on the range, Julie was hard-core.

As the first female on the first AMU practical shooting squad, young Julie had “something to prove.” Not only was she a young athlete, she was a female in the Army, and the first woman to compete for the Army in a new sport. The only way forward was to win – and she did, winning the ladies’ Open title, and a spot on the IPSC World Shoot team representing the United States.

When she left the Army, Julie dropped her heavy 2011-style pistols in favor of the nimble

Glock 34 – famously winning the ladies “Limited 10” title with a 9mm. At the time, winning anything with a 9mm was supposed to be “impossible” – yet Julie did it twice – first with a Glock 34, and later with a minor-caliber 1911 at the Single Stack Classic. Her successes with Team Glock put Julie back on the US World Shoot team (an honor bestowed every three years), cementing her credentials as a pro worldwide.

Since then, Julie has qualified for every U.S. World Team since except one, traveling to the Philippines, Ecuador, Greece, South Africa, and Florida. She’s been the top American finisher on all her teams save one, and won medals in the past three.

Thinking Big

A position on Team Glock ranks among the most-coveted positions a shooter can earn, but Julie surprised the shooting world by switching away from Glock to S&W.

“I faced a choice. I could just compete for my entire career, or I could become a voice in the industry... I remember thinking ‘Right now (competing) is what I live for, but what will I do when I start to slow down?’”

Julie took on a combined role as “athlete” and “team manager” for S&W – recruiting, supporting, and managing a multi-tiered team of athletes from Jerry Miculek on

down to several dozen regional shooters. Golob set up shop in Montana – far from S&W’s corporate offices – and started recruiting and cultivating media exposure for her athletes. Along the way, she lobbied for greater media coverage for all female shooters, and started writing about women’s issues in shooting magazines and online. Her suggestions transformed the once-tiny USPSA Revolver Nationals into a shoot that draws hundreds of athletes, and her team drove S&W’s then-new M&P platform to prominence. Her media efforts connected her with Jim and

Quiet Strength

John Scoutten at “Impossible Shots” – and the she has stayed on cable TV ever since.

“There’s no question Julie has won titles, so have other Pro Shooters. But what sets Julie apart is how skilled she’s become at media, particularly Television,” says Jim Scoutten, the Executive Producer at Shooting USA Television. “She’s a real, likeable, person who holds the audience for whatever message she’s delivering, whether it’s a Pro Tip for us, or a membership appeal for the NRA.”

Adapt and Overcome

Sylvester Stallone’s character Rocky Balboa talked about how “life hits harder than any opponent you’ll ever face.”

Julie fell on a set of stairs and broke her back in 2007. She lost a significant range of motion, and faced a months-long recovery. That happened just as the top female USPSA competitors (Lisa Munson, Jessie Duff, Carina Burns) began emphasizing physical strength and power, driving themselves ever faster. For months when her competitors were pumping iron and doing Crossfit, Julie was strapped into a back brace, barely able to walk.

She recovered enough to win her famous Limited-10 title with a 9mm in 2008, but had to step back from that year’s World Shoot team for good reason. She was pregnant. While her teammates traveled to Bali, Indonesia, Golob kept busy raising a newborn.

Motherhood ends athletic careers. I asked about the challenges of being a mother/athlete, and Julie told me straight: “It’s hard. I didn’t think it would be as hard as it would be. Kay (Miculek) was able to do it, but she’s part of a shooting family, and that’s big. Carina (Burns-Randolph) had to cut things out dramatically...Kippi (Leatham) left and never really came back 100 percent. There really wasn’t anybody to use as a model that had, like, a plan.”

In 2009, I found myself photographing Julie in action for *Front Sight* magazine. She’d evolved through her injury, and caught up physically. She’d changed her technique to emphasize the use of her legs and knees to drive her body from target to target. Her stance was much more aggressive and athletic – and she was picking off new titles in USPSA, IDPA, and adding ICORE revolver events.

The Julie you see on camera today has the same strength of will as the hard-charging Julie of old, but tempered with a mother’s wisdom.

“I used to be truly obsessive about winning, and thinking that everything came down to a bunch of statistics,” says Golob. “Now I don’t want to *just* rack up the titles, I want to share the influence. How maven-ish!”

With two kids, two dogs, three cats, and four chickens, today’s Julie Golob is starting to look more like Montana’s legendary Judy Woolley, transplanted to Missouri.

“My husband and I joke about retiring and opening up a bed-and-breakfast shooting range on a big spread in Montana....Right now I’m trying to convince him to get a goat,” she laughs. “Missouri is the home of poison ivy and goats love it!”

Bully Pulpit

With her rising stardom, Golob’s dance card stays full.

“My most recent thing has been working with the NRA and the ‘Love At First Shot’ series. I took on a guest host position where I teach people how to teach OTHER people how to shoot.”

That’s a familiar position for Julie, but in a new way. “As a competitor, we have default suggestions like ‘shoot USPSA for a year and your gun handling skills will be awesome,’ but being able to suggest that beyond our little circle matters. On the show you can see that I may be a woman, but when I pick up a gun it doesn’t look

awkward. Gun people see that right away.”

Julie will be the first to tell you that for the gun culture to survive and grow, outreach programs like “Love At First Shot” that cater to women have to expand. That’s always been part of her mission – reaching out to women and to new shooters everywhere.

“She’s the best possible representative of responsible gun ownership,” says Scoutten.

Julie’s intensity, teamed with her ability to adapt has become a kind of professional signature. It’s not what Julie could do yesterday that matters – it’s what she wants to do *next*. Keep an eye on the results from the Carry Optics nationals in August. If she’s able to pull it off, Golob will have claimed the ultimate competitive hat trick.

“For months when her competitors were pumping iron and doing Crossfit, Julie was strapped into a back brace, barely able to walk.”

50 "Big Fifty Reloader"

STANDARD FEATURES:

- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2"-12 UNF Thread Dies
- Manual Shellplate indexing
- Average Loading Rate: 300 Rds./Hr.
- Loads High Volume/Match-Grade Ammo
- Milspec/Match-Grade Priming System
- Ductile Iron/Carbon Steel Construction

Dillon's New Bench Wrench

Fits new 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

1" Dillon Die Lock Ring **N06-14067 \$1.35**
 5-Pack of Die Lock Rings **N06-10669 4.15**
 1" Dillon Bench Wrench **N06-10842 7.95**

(Buy two or more 1" Bench Wrenches for \$7.10 each)
 Wrench/Lock Ring 5-Pack **N06-10668 9.95**

Grace USA Gun Care Tool Set ⁵³

This custom designed 12" x 9" x 1-1/2" case is made from durable soft Nukaf and contains a 17-piece set of Grace USA Gun Care Screwdrivers (8 ea.), Solid Brass Pin Punches (8 ea.) and a specially fabricated 8 Oz. Brass Hammer. The screwdrivers are hand-assembled and custom hollow ground to fit scope screws, plug screws, guard screws, etc. The handles are turned from quality Maine hardwood and protected with a smooth finish. Made in USA.

Grace USA Gun Care Tool Set **N06-10680** **\$99.95**

ElZetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

N06-14762 \$29.95

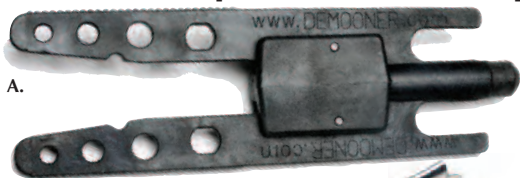

TARGET SPORTS® TACTICAL

This three-piece shooting bag set is an incredible value for the money! The bags are made of durable, water-resistant 600 denier polyester and provide a steady and solid shooting system for long guns and handguns. I filled the ones in the photo with walnut tumbling media and found them to be easy to fill and much lighter to carry than when filled with sand.

The ERGO Grip Delta Grip™ is the first truly ergonomic grip for J Frame revolvers. Designed for the most important part of the gun, the shooter, the Delta Grip was engineered to fit the natural point of aim and mechanics of the human hand, wrist and arm. The result is a grip with a superior natural point of aim, comfort and control. Fits round butt J-Frames. Will not fit on Smith and Wesson Bodyguard 38 Model (sku 103037 and 103038).

N06-19684 \$19.95

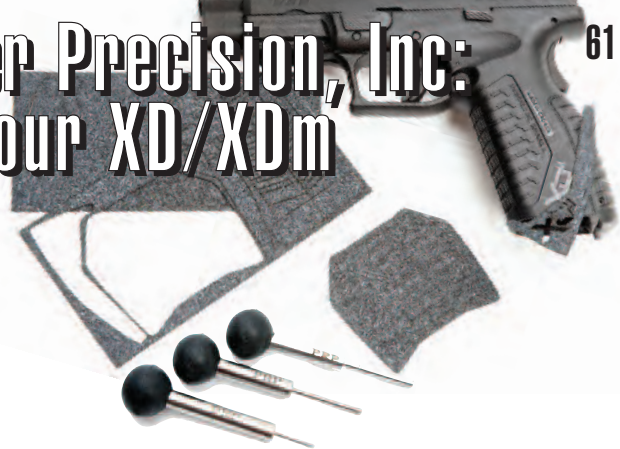

DeSantis Clip-Grip®

This replaces the grips on S&W J-Frame round butt revolvers. A hook on the right grip panel functions as stopping point for the revolver when tucked into your waistband.

Above: Iver Johnson Frontier Four .22 Derringer
Right: Korth Sky Marshall 9mm Revolver Cutaway

locks open on the last shot. A very impressively-built unit, and the price is around four hundred dollars and change.

At last year's SHOT Show, I discovered a neat Mauser Model 712 machine pistol replica by Gletcher Air Guns (www.gletcherguns.com). I stopped by their booth this year, and they have several beautifully executed Luger replicas which function like the originals. These are great shooters, and a whole lot less expensive to buy and to shoot than the originals.

CZ-USA (www.cz-usa.com) introduced the latest configuration of their classic Scorpion pistol, now in 9mm Luger. For the barbecue gun market, they have a highly polished stainless version of their classic CZ 75B 9mm pistol. And, speaking of bright, shiny objects, Uberti (www.uberti.com) was showcasing a high polish nickel S&W Russian Model chambered for .45 Colt.

If you're seriously into Olive Drab or Flat Dark Earth, SIG SAUER (www.sigsauer.com) has the goodies for you. Check out their Compact Army 1911 in .45 ACP, pocket Army P938 in 9mm and pocket Emperor Scorpion P938, also in 9mm with threaded barrel.

Iver Johnson Arms (www.iverjohnsonarms.com) has been notable for its 1911 variants in unique

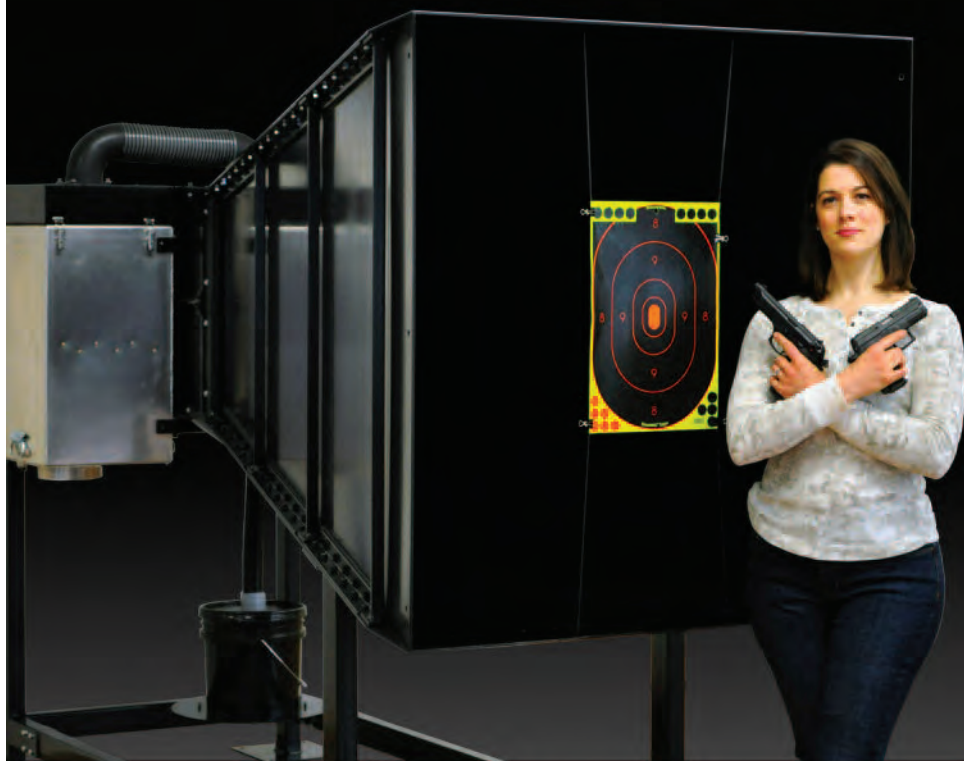

finishes, including a number of snakeskin patterns. This year, they displayed a pair of tiny 4-barrel .22 LR Frontier Four pistols reminiscent of the classic Sharps derringers.

Korth (www.korthusa.com) handguns are normally in the stratospheric range, price-wise, but for us poor folk, relatively speaking, their Air Marshall 9mm revolver is almost affordable at about 900 bucks. They had a neat cutaway version at the booth.

Colt's Manufacturing Company (www.colt.com) was showing off an impressive variety of 1911s, Single Actions and Modern Sporting Rifles. I was, however, particularly interested in their revival of the classic Model 1903 .32 ACP pocket pistol, one of the nicest pocket guns ever put on this earth. I had been trying to get hold of one since last year's SHOT Show, but to no avail. This year, I got to handle a neat cutaway version, and once again put my name on a list. We'll see.

And finally, a bit of advice for carnivores: when you're in Las Vegas, make a reservation at Lawry's, The Prime Rib (www.lawrysonline.com). I've been to some fine restaurants over the years, but this one is incomparable. If prime rib were a religion, Lawry's would be the Vatican.

RANGE TIME. ANYTIME.

Our Pistol Perfect bullet traps make range time, anytime a real possibility.

Available in 3 different sizes, each trap can handle handgun calibers up to .44 Magnum, and rifle calibers up to .223/5.56mm.

Our patented bullet trap technology ensures the shooter of a safe, clean, virtually maintenance free way to target practice. Lead is deposited into a collection pail, which can be recycled or sold. Talk about convenience!

Visit our website to see which Pistol Perfect Trap will work best for you.

Extra Loading Data Labels, N06-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Swab-its® - A Swab for Every Job!

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!"

The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform applica-

tion of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

.22/5.56mm (6 ea.)	N06-15310	\$4.98

-------	------------------	----------------

Sweet's Australian 7.62 Solvent

easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

	N06-13128	\$12.95
--	------------------	----------------

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is used in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	N06-15571	\$7.95
Slide-Glide Lite	N06-15572	7.95

Micron UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

Dewey's AR-Link Cleaning

Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

Dry Fire Won't Hurt 69

By Chris Cerino

Dry fire is probably best termed, “dry practice,” because it is so much more. A great deal can be learned from dry practice and modern firearms are up to the task. There are actually very few guns these days that you can’t dry fire. The whole, “Never dry fire your gun,” myth is losing momentum.

Anyone unsure about whether they can dry fire should check the owner’s manual or email the company with the question. Generally taboo,

.22s are many times not recommended to be dry fired. Recently, I purchased some Ruger LCR .22 caliber revolvers for training, and was surprised to find dry fire was permitted. Being rimfires, there’s always concern about dry firing and ruining the chambers, or breaking the firing pin. The owner’s manual actually had a statement that read, “The LCR can be dry-fired without damage to the firing pin or internal components.” What a great thing to know.

Never dry fire with a loaded gun. Funny, but true. Proper clearing procedures before handling any firearm you are cleaning or practicing with should be common practice. People are killed or injured with, “unloaded guns,” every year. Heck, everyone knows someone who shot something with an, “unloaded gun”; windows, closets, lockers, TVs, mirrors and the occasional family pet. A large Federal agency had to ban dry fire because too many agents had shot mirrors and TVs in hotel rooms while traveling. You can hide a lot of accidents until a bullet pierces a water pipe. Then, it gets complicated.

Clearing your firearm should consist of these steps:

- Remove the source of ammunition (magazine, clip, individual rounds, etc.).
- Lock the slide to the rear or open the action.
- Visually *and* physically inspect the chamber and magazine well.
- LOOK AWAY.
- Again...visually and physically inspect the chamber and magazine well.

- Close the action.
- Point the gun in a safe direction and press the trigger.

Never shortcut safety. Don’t be too lazy to lock the slide open, check the magazine well and chamber, twice. Over the years I’ve seen shooters do things half-assed and crank off rounds unintentionally. Steps get mixed up or focus on the task is lost and they just go through motions. Then, when they point the gun in a safe direction, downrange,

they get a hell of a surprise when it goes off. Of course it’s usually one of their best shots of the day, since they assumed the gun was empty. We check it twice because the second check is a *conscious decision* to verify what we saw the first time. It’s almost inconvenient, intentionally.

So much more than just dry fire, dry practice involves many of our gun handling skills. Sure we focus on trigger work the most, but don’t disregard the many other dry fundamentals.

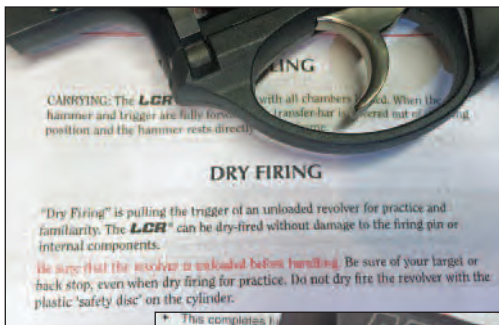

I think about:

- Grip
- Presenting the firearm
- Sight alignment
- Sight picture
- Trigger management

Dry fire helped me cure a constant right tick. Impacts slightly to the right of

my intended target were diagnosed by dry firing with intense focus on the sights. I began to notice the light spacing on the right side of my front sight close ever so slightly when the hammer fell. Trying different finger placement on the trigger with no luck I finally realized that it was my strong-hand grip causing it. A right-handed shooter, my strong hand was too relaxed and it allowed the back of the pistol to slip across my palm causing the muzzle to tick to the right. Live fire indicated that I had an issue but dry practice helped me finally see what I was missing due to the recoil and movement of the gun.

A great way to dry practice is to use a blank wall without so much as a pinpoint to look at.

Before you decide to engage in dry practice, read the owners manual to see if it's safe to dry fire your firearm.

Dry Fire Won't Hurt *Continued from Page 69*

Practice your draw and presentation to the wall with your muzzle about two inches from the wall's surface. Watch the sight alignment intently as you squeeze the trigger and the hammer falls. When the hammer falls, you should see if there is any deviation in the sights. If there is, change something in your hand placement, grip pressure or trigger finger placement. Be sure you do this with both single action and double action if your gun has both functions.

When you get tired of shooting at blank walls you can place a two-inch circle on the wall and use it as your desired target area. Focus on the circle until the gun interrupts your plane of vision, then change your focus to the sights as you

squeeze the trigger. Now, watch the sights and sight picture for any deviation, if necessary change something to get the results you need.

Dry practice gives you the extra time on task you need without the added costs ammunition or distractions of recoil and muzzle blast. It'll also give you the repetition necessary to build the physical and mental skills you need when live ammunition is introduced. Before you can fix anything you need to identify the problem and dry practice will give you that opportunity.

TARGET OF TACTICAL RIFLES	
SPECIAL SAFETY NOTE 10/22 TARGET RIFLE ONLY	
The special model you have selected is specifically designed for rapid fire precision target shooting. As such, it demands that you take extra safety precautions.	
The trigger of the Target version of the RUGER® 10/22® has a lighter, target trigger pull than standard 10/22 rifles and carbines, for more precise placement of shots. You should practice "dry-firing" an empty rifle (with it pointing in a safe direction) to learn the "feel" of the trigger before ever loading it with ammunition.	
WARNING - TARGET TRIGGER	
	10/22T Models have a target trigger that has been carefully set at the factory to a minimum safe weight of pull for precision target shooting. Do not alter any factory setting! You can create an unsafe condition and the rifle may fire unexpectedly.

Again, read the owners manual to make sure it's safe to dry fire your firearm.

Chris Cerino, of Cerino Consulting and Training Group (chriscerinotraininggroup.com), was a contestant on the History Channel's "Top Shot" Season One and "Top Shot All Stars."

72 GRSC CQB Slings, Sling Mounts and Front Swivels

The GRSC CQB Sling was designed as a mission-specific sling for CQB operations. It attaches only at the rear of the firearm and allows the operator to quickly transition to a handgun if necessary.

BURRIS

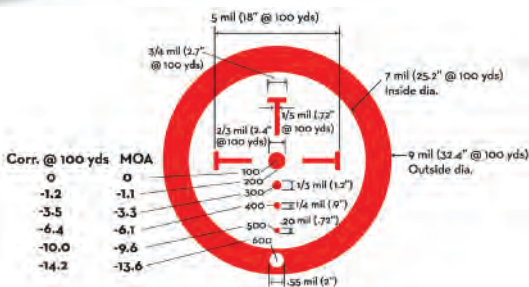

MTAC 1.5-6x42mm

The resilient MTAC 1.5-6x42mm riflescope is tough, with superb, glare-resistant glass and a sleek, snag-free profile. This compact model is perfect for 3-Gun, close quarter battle (CQB), or big-game stalking. With its high-performance glass, solid 1-piece tube, and internal double spring-tension assembly, this MTAC Rifle scope can handle the harshest shooting environments.

And it's guaranteed by the Burris Forever Warranty™.

The fast-action Ballistic CQ™ reticle was designed for competitive shooters and law enforcement and military operators. The low-magnification, bright, fast-action reticle also serves dangerous game hunters well.

A circular, center "donut" provides ultra-fast engagement at close distances, and smaller reticle dots provide

trajectory compensation out to 600 yards for the 5.56 and 7.62 cartridges. The illuminated reticle gets you on target faster in any lighting condition and increases accuracy when the target is dark.

Elevation and windage dials are calibrated to 1 click = 0.5 MOA; both can be reset to 0 once the scope is sighted in. The eye relief is generous – up to 4" – for comfortable shooting.

The scope features an ergonomic power ring for easy grip and quick power setting changes; finger-adjustable MTAC mil-rad target knobs for easy precision adjustments; and a rubber-coated eyepiece provides protection, comfort, and style.

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

There's Nothing N

By Duane Thomas

In the February 2016 issue of *The Blue Press*, we discussed the Modern Isosoles (MI) stance, or as I like to call it, the Diamond technique, which seems to me a more correctly descriptive term since MI entails not holding your arms locked out in an isosoles triangle but instead flexing both elbows so that, when observed from above or below, the arms form a diamond. Ask most shooters, they'll tell you MI was invented in 1980 by Grand Masters Robbie Leatham and Brian Enos, at the same time they developed and popularized the straight-thumbs method of gripping a handgun. Talk to Robbie and Brian, and I have, they'll both tell you, "We didn't invent anything." Instead they experimented, synthesized, and combined a lot of things that already existed.

The Weaver Stance

What we now call the Classic Weaver stance was inspired by the shooting technique used by Jack Weaver to win the first-ever Leatherslap in 1959. It's worth noting that, in the early days, the term "Weaver stance" simply referred to the idea of holding the gun in both hands, raising it up to eye level, and aiming using the sights. The more formalized, double bent arms approach of the Classic Weaver stance where the master arm is slightly bent, the support arm is radially bent with elbow pointed downward, master hand pushes forward, support hand pulls to the rear, isometric tension approach came later.

Broken Shoulder?

Grand Master Bruce Gray, who has been a practical pistol competitor since he shot his first match in 1972 when he was 17, back when it was still called "combat shooting," told me he believed the reason Jeff Cooper incorporated the radically bent support side arm into the Classic Weaver

stance was "because Cooper had broken his shoulder and couldn't raise his left arm. This was a common piece of knowledge back in the day." I was never able to ascertain whether, in this case, "common piece of knowledge" translated into "It's true" or, as we used to say in the Army, Unverified Rumor Control. I mentioned the "broken shoulder" rumor in my previous article, hoping to be contacted by someone knowing the real truth, because this was something about which I had been wondering for years.

Shortly after that article was published, editor Mark Pixler received a very nice email from Ken Campbell, Chief Operating Officer at Gunsite, saying in part he had discussed this matter with Jeff Cooper's wife, and she said that Cooper never broke his shoulder, but he did break in left arm when he was in the Marine Corps. Then Mark received a long, detailed, wonderful letter from Alan Weaver, Jack Weaver's son. Alan was actually there at the first-ever Leatherslap, and shed invaluable light on this historically important event. Then Mark told me he'd met "a guy" at SHOT who told him, "I talked to Lindy Cooper and she told me the 'broken arm in the Marine Corps' story's not true, either." Obviously I needed to talk to

Lindy Cooper. By this time I was feeling like a human bloodhound, but I wanted to know the truth, one way or the other.

Tracking Down the Truth

Shortly thereafter, I was able to discuss this matter with Lindy Cooper Wisdom, Jeff Cooper's daughter, who graciously volunteered her time over the phone between me in cloudy Washington State and her in sunny Arizona. What a nice lady! Lindy mentioned she was also at the first-ever Leather-

Thell Reed,
combat master.

slap, along with Alan Weaver, but “He was a little kid, he was five, I was ten.” I love that. I asked her about the “Jeff Cooper’s broken shoulder” rumor. Here is what she had to say on the topic.

“When that article came out, my mom saw it first, and she said, ‘Oh, that’s not correct, it’s too bad. He actually broke his left arm in Korea.’ I interviewed my dad for weeks on end when I was writing his biography, so I think I have a pretty good handle on this. Dad never broke anything on his left side, and it wasn’t his shoulder, it wasn’t his arm, it was actually his right elbow. And it didn’t happen in Korea, it happened in Washington DC. He was holding my sister, and he slipped on ice and in order to protect her he landed on his right elbow. Where most people have an elbow, he just had a hollow. At first he tried tennis to rehabilitate his elbow, but that was just too painful.

“We happened to be living at Quantico at the time, in Quarters 424 overlooking the shooting range, and he said to himself, ‘Maybe shooting, drawing the gun, would be easier on my elbow and help to rebuild it.’ So that actually worked, in terms of rehabilitating his right arm. This would have been in the 1940s. But the Classic Weaver stance, and its arm position, had nothing to do with any injury or physical disability on my father’s part. By the time of the Leatherslaps, he could straighten out both his arms just fine. When I told all this to my mother, she said, ‘Oh Lindy, you’re right, I misremembered that.’ But by that time, Ken had already sent out his email to *The Blue Press*.”

If you want to read them, both Ken Campbell’s email and Alan Weaver’s letter were published in last issue’s letters column.

My research into this article also discovered something not commonly known about the codification of the Classic Weaver stance, and frankly something of which I was previously unaware, myself: the contribution of John Plähn.

Lindy Cooper commented, “Jack Weaver wasn’t inclined to analyze why he decided to use two

hands, or why he bent one elbow. He said, ‘It just felt like the right thing to do.’ So my dad would sit down with John Plähn [pronounced “plane”] – another Leatherslap competitor, and considered one of the early combat pistol masters – because John had a degree in physical education, and say, ‘Why do you think this works?’ And John would say, ‘I think this is why it works.’ They both just found it fascinating. Other than my dad, John had the most to do, analytically, with developing the Classic Weaver stance.”

So my previous article served its purpose and generated an answer to something that had puzzled me for years, and with this article we can finally lay to rest a long-standing rumor. That whole “the reason the Classic Weaver stance has a radically bent left arm is because Jeff Cooper broke his shoulder and couldn’t straighten out his left arm” thing that was “common knowledge back in the day” was indeed Unverified Rumor Control. Cooper never broke his left shoulder, and at the time, working in tandem with John Plähn, he developed the Classic Weaver stance, in fact he had two fully functional arms. The Classic Weaver stance incorporates bent arms because John Plähn and Jeff Cooper thought that was a good idea, no more, no less.

Boxing?

Years ago I was discussing the “broken shoulder” story with an old friend of mine, martial artist Gray Cassidy, and

Gray had his own, very interesting theory on why the Classic Weaver stance incorporates a radically bent left arm. Gray observed that when trying to figure out a technique for doing something new, there is a very real tendency to build it on a technique you’ve already learned to do something else. I have seen this numerous times as an instructor: the martial artist who wants to shoot a handgun using her unarmed-fighting stance, the photographer who wants to stand while shooting the same way he holds his camera, the musician who wants to manipulate the trigger the same way she depresses the strings on her violin.

Elden Carl,
combat champion of
1962

Photo: The Outdoor Life Complete Book of Shooting

John Plähn and Jeff Cooper were both college educated men at a time when colleges still routinely taught the manly art of self-defense, i.e. boxing, to young men. Examine the classic boxing stance (assuming a right handed person): the left leg is forward, right leg is back, left arm is bent and up to protect the head and jab, right arm is down and back for long, powerful punches. Now, take your right arm and simply raise and extend it until it meets your left hand, boom! you're in the Classic Weaver stance.

Shooter Meets Gunwriter, and the Rest is History

I believe there have always, over the decades, the different centuries, been men who understood how to fire a handgun really fast, well, and accurately. But the knowledge kept being rediscovered then lost because, frankly, they didn't have any gunwriters around to memorialize it. What separated Jack Weaver from all previous others using a two hands on the gun, eye level, aim using the sights approach, when he won that first-ever Leatherslap using it, was that Weaver had a gunwriter watching him do it. Jeff Cooper wrote about the new sport of combat pistol competition, and the Weaver stance's success in such matches, in a series of articles for then-fledgling *Guns & Ammo* magazine. Later on, he codified a Weaver-centric shooting system he termed the Modern Technique and began teaching it. Later still, he founded a shooting school, the American Pistol Institute *aka* Gunsite, for the purpose.

And Here Comes the Mythology

Allow me to seemingly digress for a moment. I have always gotten a kick out of the people who, in attempting to justify their preference for the Weaver stance, say, "The isosceles stance is a competition technique, the Weaver stance was developed for combat." No. Where do you think the Weaver stance came from? Jeff Cooper saw Jack Weaver using what Cooper came to term "the Weaver stance" in 1959; it was a technique Weaver developed so he could win matches. And he did. The Weaver stance is also a competition technique. We just adapted it for combat, as shooters in later decades would adapt M1 for the same purpose. I truly think that firearms "martial artists" frequently don't appreciate how much they owe the "gamesmen." The fact is that every significant advance in combat shooting technique, period, has come from the gamesmen. The Weaver stance, which was a huge advance in its time, is no exception.

Then our worthies will continue on, "The Weaver stance was used by soldiers in real wars in World War II, Korea, and Vietnam." Again, no. The Weaver stance was developed in 1959. World War II ended in 1945. The Korean War ended in 1953. There's no way on God's green earth that soldiers in World War II and Korea were using the Weaver stance because it didn't yet exist. The last troops came out of Vietnam in 1975. Since the International Practical Shooting Confederation (IPSC) wasn't formed until 1976, and Gunsite wasn't

started until 1977, both watershed events in the popularization of the Modern Technique, I also have to question how many soldiers were shooting Weaver in Vietnam.

The truth is that Jack Weaver was an early gamesman, he began putting both hands on the gun, raising it to eye level, and aiming using the sights, in order to win matches. I love the passages in Alan Weaver's letter where he recounts the reactions of certain other participants at the first-ever Leatherslap, who were shooting from the hip, as the FBI taught at the time, as all the Western heroes did on TV, to what Weaver was doing, the laughter, the level of outright ridicule leveled at him. "Someone should break Jack Weaver's left arm." And Jack's reaction: "Let 'em laugh. I'm winning all the money." Now THAT'S a gamesman! I wonder now if the "Someone should break Jack Weaver's left arm" comment somehow morphed into "Jeff Cooper's broken left shoulder," frankly.

Alan also mentions that his father's "Weaver stance" was interpretational, i.e. he adapted it to solve whatever shooting problem he had to deal with. "You can call it Isosceles or Diamond or anything you want and I can show you a photograph of my old man using that variation of a two-handed stance at a shoot of some kind..."

The Leatherslaps

There is an impression that once Jack Weaver won the first-ever Leatherslap in 1959 using a two-handed hold, every Leatherslap winner thereafter used some variation of the Weaver stance. This is incorrect. In fact, the Leatherslap wasn't won by anyone using a two-handed hold again until 1966. In 1960, 1961 and 1962, it was won by Elden Carl, in '63, '64 and '65 it was Thell Reed, all using a one-hand point technique. After Carl retired from the Leatherslaps in 1964, and Reed in 1965, that's when the dominance of the two-hand hold really started.

The Leatherslaps all took place at seven yards; at that distance, if you were really, really good with one-hand point, you could beat people using a two-hand hold. It's when a match, or life, requires you to do things more demanding that hit one big unmoving target at close range while you're unmoving yourself that the two-hand hold comes into its own.

There is also the idea that the 1911 .45 instantly began to dominate the Leatherslaps among winners. While largely true, it's not totally true. Carl won in 1960 with a Smith & Wesson Model 19 double-action revolver, and Reed won in 1963 with a .45 Colt Peacemaker single action. All the foregoing in this section is according to Elden Carl, writing of early Leatherslaps online.

The Outdoor Life Complete Book of Shooting

In 1965, *Outdoor Life* published this very interesting book called *The Complete Book of Shooting*. Internally it's divided into seven sections, three each on rifles and shotguns, finally one section on handguns. Most of the rifle and

shotgun stuff was written by Jack O'Connor; the handguns section was written by Jeff Cooper. I first discovered this book in my middle school library when I was 13, and it was the first hard-bound, real "gun book" I ever read. The rifle and shotgun stuff didn't interest me, but I read the Cooper handguns section over and over again.

I have always been fascinated by page 297 of this book, which presents five pictures of early masters in the art and science of "combat" pistol competition, each modeling their rendition of the Weaver stance. In particular I have always been impressed by the photo of Elden Carl, the "combat champion of 1962." He may have been using one-hand point to win Leatherslaps, but this guy also had his own very distinctive version of the Weaver stance.

While the other four are all executing a radically bent support arm Weaver stance, Carl is using a picture perfect Modern Isosceles stance! He's even using the straight-thumbs method of gripping the gun. Also note that while the other three autopistol shooters all have their index finger wrapped around the trigger guard, which was considered very smart at the time, Carl has all four support hand fingers under the trigger guard like most modern shooters. Compared to the other photos, Carl looks like a man out of time. WAY ahead of his peers in his evolution of technique.

If Jeff Cooper had been more impressed with Elden Carl than Jack Weaver, we could have had

the Modern Isosceles stance and straight-thumbs grip back in the 1960s. Think about that for a while.

Summary

When Jack Weaver began using his "both hands on the gun, raise it to eye level, aim using the sights" approach to shooting a handgun fast and well, it wasn't that no one had ever done this before, but because Jeff Cooper was there to document Weaver's success, the knowledge was not lost again, as it had been every other time before. Instead it spread into common knowledge. This was an evolutionary leap forward in combat handgun shooting technique. If we go back to the original idea that all the term "Weaver stance" really means is "Put both hands on the gun, raise it to eye level, and aim using the sights," the truth is that today we all shoot handguns using a Weaver stance. Most all of us, anyway, there are still a few folks who didn't get the memo. The details of the technique might be different; the core concept is the same.

Every serious combat handgun shooter, whether martial artist, gamesman, or both (what I call "martial gamesmen" who use competition as a tool to develop and sharpen skills that might serve them in good stead in a real fight) owes a huge debt to Jack Weaver and Jeff Cooper. There is an old saying, "If I see far, it is because I stand on the shoulders of giants." Jack Weaver and Jeff Cooper were giants.

101 Classic Firearms by John Marshall ⁸³

Dillon Precision announces the release of John Marshall's new book **101 Classic Firearms: A Chronological Foray into the Golden Years of Firearms Development**, a compilation of the author's popular articles appearing in **The Blue Press** since 2007. **101 Classic Firearms** is sure to be a welcome and prized addition to the library of any serious firearms aficionado.

Published by Dillon Precision, and printed and bound in the USA, **101 Classic Firearms** is a high-quality full color 11.5" x 9" hardcover with 224 pages packed full of insights and history on

some of the world's most important firearms. About the Author: John Marshall is an accomplished photographer and freelance

writer whose articles have appeared in **The Blue Press**, **Gun Digest**, **Guns & Ammo's Handguns**, and **American Gunsmith**. An expert on firearms, he is also a member of the Remington Society of America, the Smith & Wesson Collectors Association, the Smith & Wesson Historical Foundation and the American Gunsmithing Association. He is also an endowment member of the National Rifle Association.

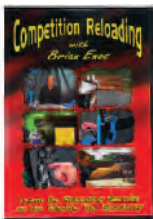

Price: N06-40133 \$29.95, Autographed N06-97130 \$34.95

Competition Reloading with Brian Enos guides you through a complete step-by-step reloading process for IPSC, Steel Challenge and NRA Bianchi Cup style shooting.

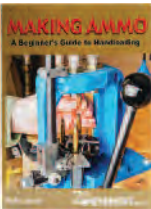

Using a Dillon Precision XL 650 reloader with CP brass and CP bullets, Enos demonstrates proper reloading techniques for the most popular loads used by the top shooters. Enos is, of course, a champion himself, winner of the Masters Competition, the NRA Bianchi Cup and a top contender in the USPSA for many years. Run time: 80 minutes.

Making Ammo: A Beginner's Guide to Hand-loading by Kyle Lynch – Ammo shortage? Not anymore! Learn a new hobby that will save you money and ensure that you always have enough of the right ammunition for your shooting needs. This guide offers you an opportunity for first hand information from an experienced reloader as he takes you through the reloading process. Examples explain what works and what doesn't. If you are new to reloading or want to understand the fundamentals more fully, this guide provides simple step-by-step instructions.

N06-43270 \$23.95

Legally Armed: A Concealed Carry Gun Law Guide – Learn the basics of concealed carry and the laws associated with this astronomically growing group of self-reliant Americans. If you depend on a handgun for the protection of yourself or your family, arm yourself with knowledge, too. What's inside? What to consider before carrying a firearm • Protecting oneself: discharging a firearm in self-defense • What to do when interacting with Law Enforcement • Gun handling, practice and storage • State-by-state quick reference guide to carry laws where you live and travel.

N06-43269 \$14.95

Armed & Smart: A Beginner's Guide to Concealed Carry – If you are new to concealed carry and need a great resource for information, this is the book for you. This book covers all the basics a beginner needs to know.

Before you make the decision to exercise your Second Amendment right to bear arms through concealed carry, you should consider factors like what type of gun is best for carry, when to carry a firearm, how to carry concealed, and why you should carry a concealed firearm.

We carefully cover handgun safety and the proper steps for using and caring for your firearm. Other topics include cartridge selection, accessories available, practice techniques, and range etiquette. **N06-43232 \$16.95**

Armed & Smarter: Advanced Concealed Carry Weapons & Training – Once you have mastered the basics for carrying your concealed firearm, you need a book to build on that foundation and hone your skills to those of an intermediate-level handgunner. After obtaining your concealed carry permit and securing a firm grasp of the responsibilities attendant to carrying a concealed firearm, it's time to focus on becoming an excellent marksman.

In **Armed & Smarter**, our authors prepare you, the shooter and gun owner, to handle and use your handgun responsibly. By the end of this book, you will understand the importance of strong habits and perfect practice.
