Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

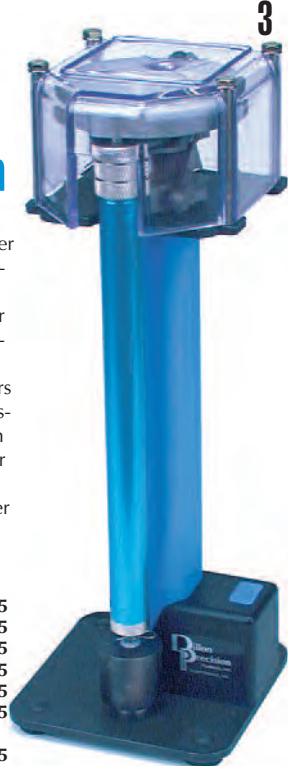

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

We READ Our Mail!

I wish to retract my letter and complaint that was in the July issue. I complained about your slow responses to telephone calls. Sometimes we tend to complain too quick about a problem before we stop and think about the situation at hand. These are indeed "unusual times," not only in the firearms industry, but also for us the users of equipment and ammo. As you say, you could not have anticipated the impact of the tragedy of December 14, 2012. You continue, nevertheless, to do a great job there at Dillon. We are all proud of you. I will try and be smart and use the email, as you suggest, instead of the telephone. Keep up the good work.

Herman Hansen - DeKalb, Illinois

Thanks, Herman! We'll continue to do our best.

Regarding: "A New Concept in Police Firearms Qualification" (July issue) I'm glad to see someone is still trying to train with relevant skillsets. I trained for a mid-sized SO for about five years in the late 90's/early 00's, and we used a six-stage course of fire with 70 percent of the stages using movement and decent time frames. Fast forward to today and Ohio has a miserable 25-round course of fire, with NO MOVEMENT. This does appeal to administrators because it uses half the ammo, and has a failure rate...well, if you're breathing you can pass. Civilians who shoot do not realize how little firearms training officers get UNLESS THEY DO IT ON THEIR OWN DIME. This may seem counter-intuitive, but cops are largely non-shooters, even though their life depends on it. My non-LE shooting friends - who meet weekly - have more frequency and repetition than my old SWAT team. Most LEOs are amazed the first time they see ANY tactical-type competition, IDPA, 3-Gun, etc.

Brian Torgeson - thetorgesons@msn.com

My husband got the RL 550B last year and loves it! We are having our first child soon and we were talking about how cool it would be if we could find a toy Dillon press for our son when he got older so both guys could be making "ammo" together. Is there such a toy out there?

Miriam Brown - brown.mir@gmail.com

I'm sorry, Miriam, I'm not aware of any toy reloading presses on the market. Sounds like a good project for a Grandpa with a well-equipped wood shop, though!

Thank you for printing the article on Grandpa Dillon's .45 (July issue). I love history, especially the history of the American West. I hope you will consider printing more articles like this one.

John E. Lane - M1H3L@juno.com

John, I know you'll enjoy the new "Grandpa Dillon" story on Page 20, and there are more to come in future issues!

ECONOMY KAHR: Kahr CW380

Reviewed by Peter Caroline

I was very impressed with the first Kahr pistol I ever saw. In 1995, I was in a gun shop in Tucson, and spotted this new pistol, the Kahr K9, the first compact 9mm I'd ever laid eyes on. I had owned a number of 9mms previously...a Glock, several Lugers, Walther P38s, Browning P35s, a Radom and even a Mauser broomhandle. The Kahr was small and sleek, and the bore axis was lower than any other 9mm pistol I'd ever handled. Very impressive, indeed. Unfortunately, I was in the process of having a new house built, and the money was tight, so I had to pass.

Years later, at the 2009 SHOT Show, I stopped by the Kahr booth and saw an even more compact Kahr, their new P380 pocket pistol. Unlike the original Kahr K9, it had a polymer frame, but otherwise, the technology and the craftsmanship was the same. I requested a sample for review. The gun was a pleasure to shoot, even with COR®BON +P loads, with a very manageable double-action trigger and excellent sights. What was most surprising was the accuracy, far superior to any other .380 pistol. I decided this one was a keeper, and I sent a check off to Kahr.

At the 2013 SHOT Show, I saw that Kahr was offering a new .380 ACP pocket pistol, the CW380. At first glance, it looked identical to my P380. There are some differences. The slide stop lever is Metal Injection Molded, not machined. The barrel has conventional rifling, not the polygonal rifling of the P380. Lettering is engraved, not rolled on, and the front sight is pinned in, not dovetailed. And, it comes with just one magazine, not two. As a result, the MSRP is \$419, which is \$230 less than the P380. Naturally, I was curious to find out if the performance was that much different from the P380, so I requested a CW380 to test.

Kahr makes a point, in its owner's manual, of informing you that the gun should have at least 200 rounds fired through it before it is can be considered to be properly broken in. With my P380, that was initially a problem. There was a big rush on .380s back in 2009, and ammo was scarce. Since then, I have acquired a fairly large stash of .380 ACP ammo, both FMJ and specialized defense loads. This is a good thing, because right now we're going through another ammo shortage, this time not limited to .380. Anyway, I was able to

test-fire the new CW380 with a decent selection of ammo, and I'm happy to report that this new pocket Kahr is not a fussy eater. There was however, one cartridge that the CW380 I was testing did not like. I loaded a magazine-full of CCI Blazer alloy-case 95-grain TMs. The CW380 would fire one round, and the slide would stay back. Consistently, every time. I fired Federal Personal Defense Hydra-Shok 90-grain JHPs, COR®BON +P 90-grain JHPs, Remington 88-grain JHPs, Winchester 95-grain FMJs, American Eagle 95-grain FMJs and Independence 90-grain FMJs, and all functioned without a hiccup, and the slide locked back only after the last round was fired, as it should. Then I went back to the CCI Blazers. Once again, the slide would stay open after each shot. So, I concluded that this particular CW380 has an allergy to CCI Blazers.

Just out of curiosity, I fired both the new CW380 and my 2009 P380 from a sandbag rest at 10 yards. The results were identical, predictable 2" to 2-1/2" groups. Probably not what

you'd expect from your bullseye gun, but these guns are, after all, primarily intended for use at conversational distances.

You might expect a .380 that weighs just a hair over 10 ounces to be a bit challenging to shoot. I have several that weigh more, and they're no real fun. The Kahr, however, is a surprisingly comfortable gun to shoot. The polymer frame, lower bore axis and perhaps the fact that this is a locking breech and not a blowback pistol, all contribute to a very pleasant shooting experience.

The CW380 comes in a black plastic hard-case, with a neat little trigger lock and accompanying padlock, and a detailed, well-illustrated operating manual.

I think Kahr has got a winner with the CW380. The performance is right up there with its higher-priced pistols, and the price is very competitive.

As a backup pistol for law enforcement, or a primary pocket gun for anyone, it's a smart choice.

BL 550 Dillon's Basic Loader

\$259⁹⁵

K44-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount K44-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550Bs

AUTO PRIME SYSTEM

Includes:

Primer Housing / Shield
Primer Slides, Large/Small
Pickup Tubes, Large/Small
Pickup Tube Tips, Large/Small
Magazine Tubes, Large/Small
Mag. Orifices, Large/Small
Operating Rod
Primer Track Bearing
Housing Screws
Ret. Spring Retaining Pin

K44-16627, \$82.95

PRIMER SYSTEM EARLY WARNING KIT

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system.

K44-20302, \$25.95

AUTO POWDER SYSTEM

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency.

K44-20251, \$87.95

OPTIONAL MAGNUM RIFLE POWDER BAR

K44-21353, \$29.95

AUTO EJECT SYSTEM

Greatly increases your ammo production capabilities and adds a Cartridge Chute/Bracket and a Cartridge Bin to your reloader.

K44-22120, \$30.95

AT 500 POWDER DIE

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "belling" adjustment.

Powder Die: K44-16629, \$19.95

Overize Die: K44-16626, \$19.95

Plastic Funnel: K44-16617, \$5.95

POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL 450, AT 500, BL 550 or RL 550B. (*Requires the use of an RL 450 powder die – see below.*)

K44-20029, \$22.95

RL 450 Powder Die:

K44-20308, \$21.95

RL 550B

RL 550B DVD
Instruction Manual
 K44-19483 \$19.95

STANDARD FEATURES:

- Accommodates Over 160 Calibers
- Uses Standard 7/8" x 14 Dies
- Loading Rate: 500-600 Rds./Hr.
- Comes With One Caliber Conversion
- Interchangeable Toolhead Assembly
- Automatic Powder Measure
- Automatic Primer System
- Lifetime "No-B.S." Warranty

All for ONLY...
\$439^{95*}

K44-14261

Reloading dies sold separately.

*Prices vary on exotic-caliber machines.

Total Price as pictured here with
 optional accessories: **\$736.60**

.45 ACP Die Set	K44-14404	\$63.95
Strong Mount	K44-22051	\$48.95

Cartridge Case Bin/Bracket	K44-11185	\$24.95

RL 550B ACCESSORIES

A. RL 550B CALIBER CONVERSION KITS

Contains: Shellplate, powder funnel and locator buttons. Available in all calibers; please specify caliber desired.

K44-RL550B CON-

VERSION \$45.95 (Exotic calibers, \$55.95)

B. AUTO POWDER MEASURE SYSTEMS

Additional powder measures stay on the toolhead. Never change powder measurements again!

RL 550 Powder Measure **K44-20782, \$76.95 ea.**
Magnum Rifle Powder Bar **K44-21353, \$29.95 each**
X-Small Powder Bar **K44-20780, \$29.95 each**

C. DELUXE QUICK CHANGE ASSEMBLY

With a quick change assembly and a caliber conversion kit (SOLD SEPARATELY), you can convert in less than a minute. Complete with:

- Toolhead
- Powder Measure
- Powder Die
- Toolhead Stand

Price without Dies, **K44-22058, \$103.95**

Loading dies sold separately on Pages 34, 35 & 52.

D. POWDER DIES

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "bellling" adjustment.

K44-20064, \$11.35 each
Three or more, \$10.25 ea.

X-Large Powder Die, **K44-21253, \$19.95 each**

E. TOOLHEADS

Don't adjust dies when switching calibers. These precision tool holders hold your dies in perfect alignment, making caliber changes quick and easy.

K44-13909, \$22.95 each
Three or more, \$20.95 ea.

F. TOOLHEAD STANDS

The ultimate in convenience for keeping your reloading bench clean and uncluttered.

K44-22055, \$20.95 each
Three or more, \$18.95 ea.

G. 1" BENCH WRENCH

K44-10842, \$7.95 each
Two or more, \$7.10 ea.

H. RL 550B CASEFEEDER UPGRADE

Available for most pistol cartridges – will not work with rifle cartridges.

Dillon's Rapid Trim 1200B Case Trimmer

Makes short work out of trimming large quantities of rifle brass

Dillon's RT 1200B shown installed on an AT 500.

The RT 1200B is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, a 1/4 horsepower electric motor driving a carbide cutter is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1200B is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1200B trimmer motor **K44-22080** is **\$254.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately. (Please see chart below.) Replacement carbide cutting blades, **K44-13141**, are **\$19.95** each. Upper lock rings, **K44-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes complete with large and small swage rods.

K44-20095
\$100.95

Dillon's Case Preparation Equipment

CV-2001
K44-20493
\$187.95

CV-750 K44-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator K44-20675 \$72.95

CM-500 Case/Media Separator K44-21045 \$46.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 K44-22047 \$212.95

Euro CV-750 K44-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **K44-13804** **\$8.95**
Case (20 pc.) **K44-20255** **\$135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **K44-13733** **\$8.95**
Case (20 pc.) **K44-20256** **\$135.95**

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) **K44-21375** **\$135.95**

Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.
15-pound bag **K44-13287** **\$23.95**

Ground corn cob polishing media – the best there is for that final polish.
10-pound bag **K44-13496** **\$15.95**

October 26, 1918: Grandp

By Brian Dervin Dillon, Ph.D.

Readers of *The Blue Press* have already been introduced to mustang officer William T. Dillon, this writer's grandfather (issue #253, July, 2013). Grandpa Dillon was one of the best shots in the U.S. Army, with everything from handguns up to 12-inch cannon. His 1902 First Class Gunner medal, as well as his rifle, pistol and machine gun expert badges and bars, remain in the family. An avid hunter all his life, W.T. Dillon was also an accomplished wingshooter of high-flying ducks, geese, and fast-moving doves. So how good was he with that other, non-militarily sanctioned

firearm? The family also still retains the then-brand-new L.C. Smith Ideal grade 12-gauge double and accompanying gold watch that Dillon won at Fort Lewis, Washington, when he took top honors in the all-Army shotgun competition in 1920.

A trusted subordinate of General John J. Pershing with two decades of military experience, Captain Dillon, as the San Francisco Presidio Ordnance Officer, helped form and equip U.S. Army units in 1917 during the first year of American participation in World War I. The quadrilinguist Dillon then went to France as the commander of the 67th Coast Artillery Company. Soon afterwards, Dillon who had been a First Sergeant only a year before, was jumped two more ranks to brevet Lieutenant Colonel. A fluent French speaker, Dillon was now placed in command of what Pershing designated the *First Provisional Siege Battalion*. This was a mixed Franco-American command incorporating two American and two French artillery companies. Dillon was now running giant railroad guns on the Ardennes front that could send shells as far as 25 miles into German positions. But, since the big guns were of French manufacture, their ammunition could only be obtained from French munitions depots. Irregularities in the supply of the big shells to the guns became one of Dillon's biggest headaches. Lieutenant Colonel Dillon found that

ordnance supply problems were not the only challenges he faced while working closely with our French allies in 1918.

In World War I the British issued their troops bolt-action rifles with 10-round magazines, while German and American guns had five-shot magazines. Only the French considered a three-round capacity sufficient. And, according to French military doctrine of the time, shooting the enemy was discouraged, as it interfered with "the spirit of the bayonet." Incredibly, when French *Poilus* went "over the top" they were encouraged to advance "at the walk," as rapidity was not thought conducive to good discipline.

In 1917-1918, Americans fighting on the Western Front had the superlative .30-06 round as the mainstay of their bolt-action rifles. But unfortunately for the American forces, our homegrown genius John M. Browning's B.A.R. and .30- and .50-caliber

California mustang officer William T. Dillon (at center) with some of his boys in France, 1918. First Sergeant Dillon was raised from the enlisted ranks by J.J. Pershing and made a Captain in early 1917. A year later he was jumped to Lieutenant Colonel. Photo by unknown photographer.

machine gun designs were developed too late to see action before the Armistice. Apart from a lucky few issued the 47-shot, drum-fed, British-designed Lewis gun in .303 British, most Yanks had to suffer with French-designed machine guns like the 25-shot, stick-fed Hotchkiss, or the miserable, 20-round *Chauchat*, quite possibly the worst firearm design of all time.

Both guns were chambered for the bulky, underpowered, bottleneck French 8x50mm Lebel round. This was a cartridge from the 1880's that had not entirely transitioned successfully from black to smokeless powder. Faced with overwhelming American condemnation, towards the end of WWI the designed-by-committee *Chauchat* was re-chambered for the American .30-06 round. Now the unlucky Doughboys who were issued it found that the gun simply shook itself to pieces that much faster with the .30-06 than with the earlier, more anemic, French cartridge.

For its part, the Model 1914 Hotchkiss looked like a "Buck Rodgers" contraption with five brass

a Dillon (4) - Germans (0) ²¹

“flying saucer” fins for air-cooling the barrel stacked just in front of the receiver, notched to fit over the shorter gas tube below. Unlike the German, British, and American belt-fed designs that had appeared a full 20 years earlier, the Hotchkiss was stick-fed. Soft, easily tweaked brass clips holding twenty-five 8mm Lebel rounds were fed from the left, and ejected to the right. Constant jamming problems led to the substitution of steel for brass in later ammo clips. Despite its air-cooled design, at 55 pounds (without mount or tripod) it was a very heavy gun, and worse, it overheated easily. Its battlefield baptism of fire was not in WWI Europe, but in the Mexican Revolution, where it was used by both sides, with better effect against, rather than by, Pancho Villa. Possibly its success here was because, in its export version, it was chambered for the excellent 7mm Mauser round.

Despite retrograde firearms designs and military doctrine, World War I was the first truly “modern” war. Its technological high point was the development of aviation science and air warfare during the four years of the conflict. America lagged behind all the other combatants, with not a single American flyer serving in an American-made plane in combat during the war. The AEG (*Allgemeine Elektrizitäts Gesellschaft* or German Electric Works) made Germany’s most effective bomber, or *Grosskampfflugzeug*. First on the drawing board in 1915, the AEG went through many design changes before its final iteration, the Mark V, appeared in 1918. Hard to classify, the AEG G.V was either the heaviest Medium or the lightest Heavy bomber the Germans made during the Great War. They were powered by twin liquid-cooled Mercedes monster 900-CID six-cylinder in-line engines making just over 500 horsepower in combination. With front-mounted propellers, the AEG bomber had a top speed right at 100 mph.

Larger bombers like the famous *Gotha* were reserved for long-distance, even cross-channel, missions, what today would be termed “strategic” bombing. The AEG, on the other hand, was the “tactical” workhorse bomber. AEGs hit Allied posi-

tions on and just behind the trench lines snaking all the way from the Swiss border to the Atlantic shore. Favorite targets were hardened artillery positions and camouflaged ordnance depots and fuel dumps just behind the lines.

The AEG G.V biplane bomber was over 35 feet long, had a wingspan of more than 85 feet, and stood almost 15 feet high. Unladen, it weighed just under three tons. It could carry almost a ton of bombs, plus its crew, gasoline, machine guns, and ammunition for a total laden weight of around five tons. The AEG could stay up for six hours, fly three miles high, and had a range of over 800 miles. Just over 150 such planes saw service on the Western Front. During its first year of active service, 1916, AEG aircrew served as members of the *Fliegertruppen des deutschen Kaiserreiches*, renamed the much less ponderous *Deutsche Luftstreitkräfte* (“German Armed Air Forces”) that same year. AEGs normally carried a crew of three, the pilot and front and rear gunners, firing air-cooled

An AEG *Grosskampfflugzeug* (“heavy bomber”) Mark V at a German aerodrome in 1918. Note the twin, rear-facing machine guns on separate mounts just aft of the upper wing. This was the kind of twin-engined bomber shot down by Lt. Colonel William T. Dillon from the ground with a model 1914 French Hotchkiss 25-shot machine gun. *Internet photo.*

Parabellum MG14 machine guns chambered in 8mm Mauser. The front gunner, with an unobstructed view from his forward tub, doubled as the bombardier. Some AEG versions had two rear-facing machine guns, served by an extra man, bringing the crew up to four. German aircrews greatly preferred the AEG to the “low and slow” *Gotha*, for it was much harder to shoot down in an aerial dogfight. The plane’s designers and aircrew, however, never anticipated a determined American opponent on the ground.

Lieutenant Colonel W.T. Dillon was visiting French munitions depot #1231 in the Ardennes on October 26, 1918, to unsnarl his ordnance supply problems, when the base came under aerial attack. A flight of AEG bombers at intermediate elevation were moving into position from the northeast to drop their bombs onto the thousands of shells and hundreds of tons of high-explosive propellant stored at the depot. All the ordnance personnel ran away, but Dillon managed to grab two French soldiers and persuade them, either with his language skills or his .45, to assist him in

Q. LOW POWDER SENSOR

Provides an audible and visual reminder when it's time to refill your powder reservoir.

K44-16306, \$41.95

Dillon Leather b

When we lost our supplier for Dillon Leather, we considered abandoning the gunleather business. Fortunately, we were able to team up with Mitch Rosen Extraordinary Gunleather to continue to offer a best-quality, made-in-the-USA line of belts and holsters. We know you'll like these products — we're happy to have our name on them.

Stylemaster-DL \$150

A superior shoulder rig made of best-quality leather with solid brass fittings — no cheap plastic, no soft suede or other low-quality leather.

The Safepacker

THE WILDERNESS' SAFEPACKER™ HOLSTER is the ONLY mode of concealed carry that I have personally witnessed save a man's life. It's a long story, but suffice it to say that the element of surprise afforded by the Safepacker did the trick. The folks at The Wilderness contend that the Safepacker™ is the best, most versatile and utilitarian holster in the world. I tend to agree, because the one you see pictured at left...is mine.

Mark Pixler, editor

The Safepacker can be hand carried like a day planner, equipped with a shoulder strap (not included), slipped into an attaché case, opened with the top flap stuffed between the mattress and box springs on your bed, strapped to a seatbelt, attached to a sun visor, clipped to a backpack, or worn on your hip as a very low-profile "un-holster."

- "Government Model" Safepacker, RH **K44-11703 \$89.95**
"Government Model" Fits: Colt Government Model, GLOCK 17/18/20/21/22, SIG P-220/226, Beretta 92/96, HK USP-45, 4" K-Frame, 3" N-Frame, etc.
- "Commander" Safepacker, RH **K44-11702 89.95**
"Commander" Fits: Colt Commander, SIG P-245/229, HK USP-45 Compact, Tokarev, etc.
- "Officers" Model" Safepacker, RH **K44-11701 89.95**

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. *Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.*

Uncle Mike's Kydex Holsters

Michaels of Oregon's injection-molded Kydex holsters have a level of detailing, quality and affordability unmatched by other manufacturing methods. The almost-vertical rake allows for behind-the-hip carry, and for some applications, the holster can function as a crossdraw. Smaller-size holsters can also be used for "appendix" carry. To aid concealment and to assist in the draw, the holster rides close to the body at a mid-level height. The injection-molded belt loop is designed to accept and support a variety of belts from 1" to 1.75" wide.

BLADETECH INDUSTRIES

holsters, magazine/speedloader pouches

"Revolution" Holster Series

Blade-Tech used its extensive knowledge of Kydex® holstermaking to bring you the Revolution line of holsters. Using a proprietary blend of polymers, Blade-Tech has engineered these holsters to offer lifetime performance in a wide range of conditions. The holsters won't become soft in extreme temperatures (over 300° F) and won't become fragile in low temperatures.

Holster NOT Included

The key to the successful gunfighters of the Old West was not so much the weapon of choice, but rather the holster. How quickly the weapon could be retrieved, aimed and fired was the difference between survival and becoming a statistic. The Close & Ready Holster Caddy provides a faster and safer way to protect your family. It works with most existing holsters and slides easily between the mattress and box springs on either side of your bed.

K44-18046 \$29.95

Mernickle Holsters' Conceal-Carry Performance Series

If Cowboy Action Shooting is your game, why not CARRY the gun you shoot the most? These holsters can be worn strong side, appendix carry or cross draw and are fully molded. Now also available for J-Frame S&Ws.

"Wild Bunch" 1911 Holster & Mag Pouch

This holster/mag pouch was designed in a joint effort by World Cowboy Action Shooting Champion Gene "Evil Roy" Pearcey and World Fast Draw Champion Bob Mernickle when SASS introduced the "Wild Bunch" category for Cowboy Action Shooting.

When these two champions put their heads together, they created a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame

away from your body so you'll get a full combat grip, and the holster includes the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

'Belted Magnum' Powder System

Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. Our "Belted Magnum" Powder System features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder.

Like all of Dillon's powder measures, the Belted Magnum Powder System is case-activated and can be used with your RL 550B, XL 650 or AT 500 reloader. It's ideal for loading large-caliber magnum rifle cartridges. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

The "Belted Magnum" Powder System is based on our SL 900 Shot Dispenser, so the Maximum Charge Bar won't work in our standard powder measures – you'll need to buy the entire system. The good news is that the "Belted Magnum" Powder System has an integral drain, so it's easy to empty the hopper in order to change powder types; so, if you load several big calibers with various powders, it's easy to switch from one to another.

Keep plenty of extra powder on hand, because when you're dispensing 100-plus grains into every cartridge, you'll need it!

Magnum Powder System **K44-97126 \$137.95**

Forster Products Datum Dial Ammunition Measurement System

Forster Products' easy to use Ammo Measurement System gives you the data you need to refine your case-sizing and bullet-seating operations. For example, using the average relative measurement taken from several cases that have been fire-formed from the same firearm, you can then adjust your sizing die to produce cartridges with a headspace tailored to your firearm's chamber. This complete kit includes one Datum Dial tool for checking cartridge cases, both bullet/cartridge dials for use with .17, .204, .224, .243, .257, .264, .277, .284, .308, and .338 caliber bullets, a laminated chart showing common datum diameters, complete instructions and storage box. (A caliper is required.)

K44-18960 \$157.00

Attain Peak Accuracy With Hornady's L-N-L O.A.L. Gauge, Bullet Comparator

Overall Length Gauge

The initial distance a bullet must travel when fired (from the cartridge case mouth until it engages the rifling) is absolutely critical to achieving peak accuracy. A free run of .010 to .060 is commonly employed for accurate target, varmint and hunting loads. Consequently, knowing and being able to alter the dimensions, as needed, is vitally important to precision shooters and handloaders.

Bullet Comparator

Correct bullet seating depth is critical to accuracy. In addition, minor variations in bullet seating depth will have an effect on both pressure and velocity. The L-N-L Bullet Comparator provides precision handloading dimensions.

getting the depot's Model 1914 Hotchkiss anti-aircraft machine guns into play. While the two *Poilus* charged 25-round stick magazines for him, Dillon fired two different Hotchkiss guns at the German bombers, alternating between them so that neither would heat up too much to jam. Dillon led the 100-mph bombers just a little to compensate for their speed, altitude, and for the inadequate French 8mm round he was firing.

Before they could maneuver directly over the ammo dump, Dillon shot the lead bomber down in flames. He then began putting holes in all the other German birds, until the entire flight turned around and headed back across the trench lines without ever dropping their bombs on Depot #1231. Dillon's spectacular ground-to-air shooting certainly killed at least three or four German airmen, the entire crew of the AEG he shot down. How many other aircrew he killed or wounded in the other bombers of the flight he forced back to German territory remains unknown.

Like most recipients of WWI battlefield promotions, Dillon's highest rank was rescinded after the Armistice over Pershing's objections. He closed out his military career with his permanent rank of Captain. Long

after the war was over, Captain Dillon was tracked down by A.R. Dufresne, a Commander of the French Army's Legion of Honor. At a special ceremony at the San Francisco Presidio, Dufresne awarded Dillon the *Croix de Guerre* on behalf of the French Government for "extraordinary heroism" in recognition of his action on October 26, 1918. When the French military men present asked him to comment on his achievement, Captain Dillon modestly said that shooting down German bombers in France was much easier than hitting high-flying ducks back home over the marshes surrounding San Francisco Bay.

About the Author

Brian Dervin Dillon is a fifth-generation Californian. He is the youngest-ever Ph.D. in archaeology at UC Berkeley, and has worked all over California and in four Central American countries for more than 40 years. He is widely published in both archaeology and history. A safe shooter for 52 years and third-generation handloader, Dillon is an NRA member, Chief Range Safety Officer, Certified Rifle, Pistol, Shotgun and Reloading Instructor, and a Boy Scout Rifle and Shotgun Merit Badge Instructor.

American Doughboys with a French Model 1914 Hotchkiss machine gun on a camouflaged anti-aircraft mount. A posed 1917 training photograph, note the empty loading gate and absence of ammunition "sticks." National Archives photo.

Dillon's Pistol Die Sets

Size Die

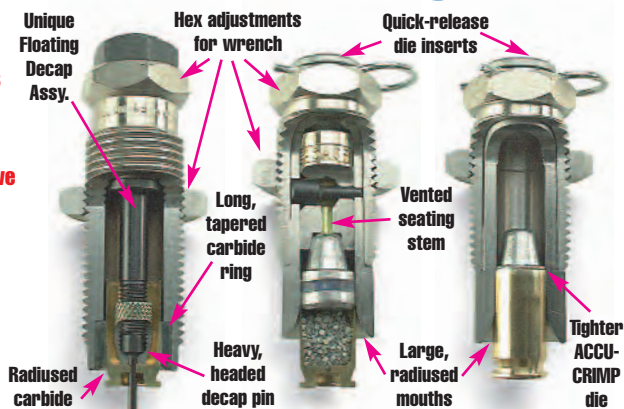

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Extra Loading Data Labels, K44-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

California Competition Works

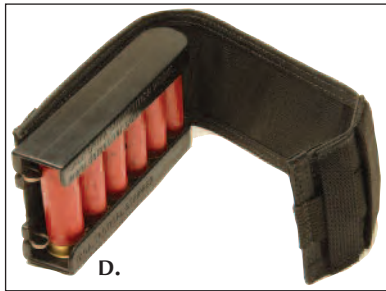

12 Gauge Shotshell Tactical Strippers

A.

B.

C.

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device

(C. & D.) that will accommodate up to a 2-1/4" duty belt.

A. Six-Shell Tactical Stripper **K44-18606 \$23.95**

B. Four-Shell Tactical Stripper **K44-18605 22.95**

C. Three-Shell Aluminum Stripper* **K44-19475 34.95**

D. Six-Shell Covered Tactical Stripper **K44-19225 33.95**

*Three-Shell Aluminum Stripper accommodates 2-3/4" shells only.

AP Custom USA Shotshell Carriers

AP Custom USA's Shotshell Carriers are 100-percent machined from solid billet aluminum, and utilize proven 303 Hi-Yield Stainless steel leaf springs to contain either three or four 2-3/4" 12 Gauge shells in their slots, depending on model. Both models offered here feature the BLADETECH Tek-Lok™ Universal Belt Clip. The 4x4 Shotshell Carrier holds four 2-3/4" 12 Ga. shells in two adjacent slots. The 4x4 is designed for loading four shells at once, either strong or weak-handed. The 3x3 holds three 2-3/4" 12 Ga. shells in two adjacent slots.

CLASSIC FIREARMS: The L

By John Marshall

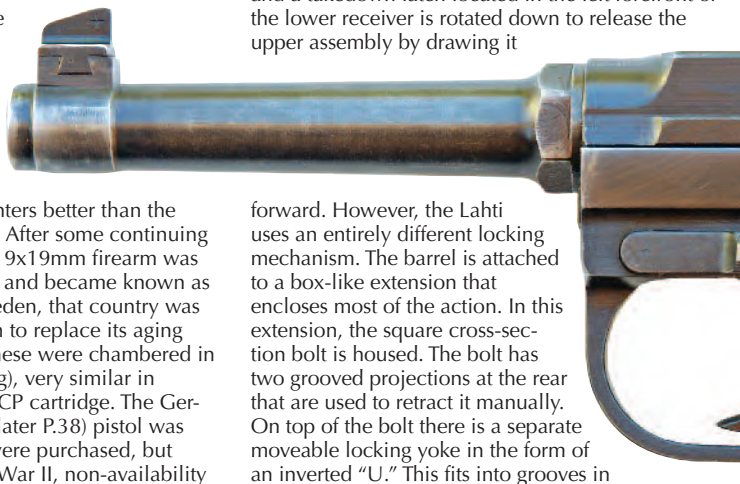

The series of L35 and M40 Lahti pistols produced in Finland and Sweden shortly before and during the World War II period are some of the most historical and fascinating military arms of that era. These pistols were specifically designed to be robust and operate reliably in harsh northern winters, and in that mission they performed admirably. Not often seen today in the western world, they are at first glance often mistaken for German P.08 “Lugers,” but they’re in fact quite different. Guns of this type first saw action in the Russo-Finnish War of 1939-40, and while most production had ceased by 1950, they were still in active military service well into the 1980s.

The first pistol of the type was designed and developed in 1929 by Aimo Lahti, a well-known Finnish arms designer. At the request of his superiors, he set out to craft a pistol that could cope with the severe Scandinavian winters better than the standard Lugers then in use. After some continuing improvements, the resulting 9x19mm firearm was adopted by Finland in 1935 and became known as the L35. In neighboring Sweden, that country was also seeking a new handgun to replace its aging M1907 Browning pistols. These were chambered in 9x20mm (SR Browning Long), very similar in power to the current .380 ACP cartridge. The German Walther 9x19mm HP (later P.38) pistol was chosen as the M39. Some were purchased, but with the outbreak of World War II, non-availability of German-made guns and then licensing and production problems on the M39 proved insurmountable for war-neutral Sweden. Seeing the efficient performance of the Finnish Lahti L35 in the Winter War, Sweden decided it would produce a slightly modified version of this outstanding pistol. The Swedes began to produce it in 1942 as the M40. The Finns had their pistols made at the *Valtion Kivääritehdas* (State Weapons Factory) in Jyväskylä. Sweden had theirs produced at *Husqvarna Vapenfabriks AB*. Both pistols are generically referred to today as Lahtis.

The first Finnish pistols were virtually hand built, and sporadic production was twice halted by conflict with the Russians in 1939-1940 and 1944-1946. When production stopped around 1950, only about 12,000 total L35s had been made. Another 1,250 were ordered in 1958, but since much of the Finnish tooling was then gone, Husqvarna had to step in and produce a hybrid L35/M40 model. In Sweden, Husqvarna was the only manufacturer, and produced over 80,000 M40s and about 1,000 civilian counterparts of the arm between 1942 and 1946. Although the Finns

had made some prototypes in 7.65mm Parabellum, all production guns from both countries were made in 9x19mm (9mm Parabellum). The gun illustrated is a Husqvarna-made example, produced in 1945. It shows an “S.S.” inspection mark at the rear, used by Captain Sten Stenmo. In Sweden, because Husqvarna also made iron kitchen ranges and because the M40 was substantial and heavy, it was often called by its nickname, the “iron stove.”

The fact that these pistols resemble the Luger came about naturally, given that the 7.65mm Parabellum pistol was the L35’s predecessor in Finland. Initial field stripping is almost identical to the Luger, where the barrel/receiver assembly is pushed back, and a takedown latch located in the left forefront of the lower receiver is rotated down to release the upper assembly by drawing it

forward. However, the Lahti uses an entirely different locking mechanism. The barrel is attached to a box-like extension that encloses most of the action. In this extension, the square cross-section bolt is housed. The bolt has two grooved projections at the rear that are used to retract it manually. On top of the bolt there is a separate moveable locking yoke in the form of an inverted “U.” This fits into grooves in

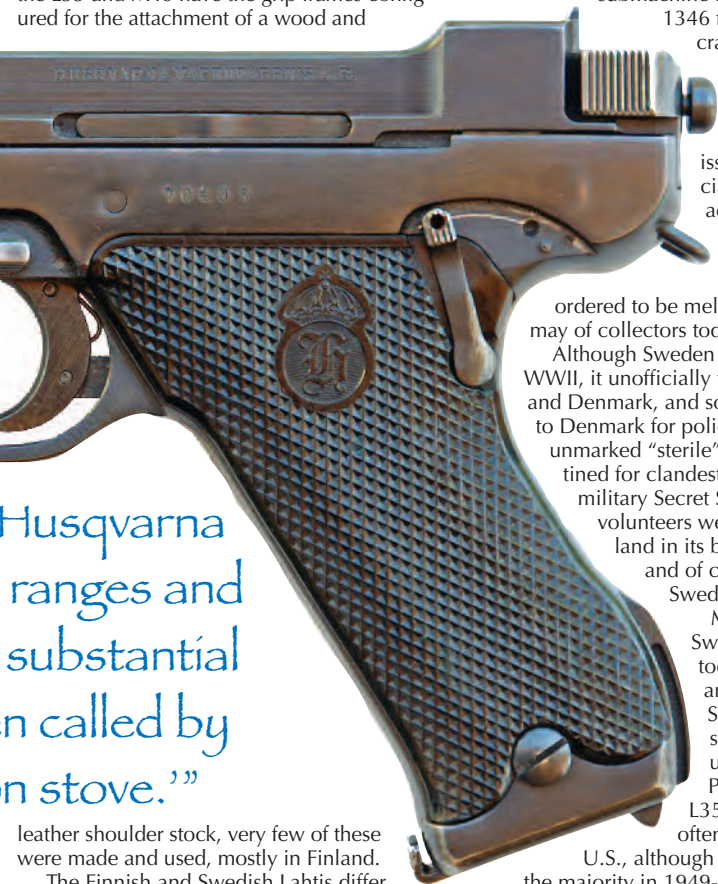

“In Sweden, because I also made iron kitchen because the M40 was and heavy, it was often its nickname, the ‘iro

both the bolt and the barrel extension. An internal hammer strikes the firing pin within the bolt. When the gun is fired, the barrel/extension/bolt assembly recoils together about six millimeters. Then the locking yoke is cammed upwards, allowing the bolt to continue to the rear by itself. A unique feature of the Lahti pistols is an ingenious rocking “accelerator” which gives the bolt an additional kick to the rear. This helps cycling when ammo pressure is reduced by extremely cold temperatures. A coiled

Lahti L35 and M40 Pistols

return spring in the upper part of the bolt returns it to load another round from the magazine. A hold-open device keeps the bolt back on firing the last round. The magazine must be removed or dropped a short distance to allow the bolt to go forward after brief manual retraction. A rotating manual safety is used, placed in a position close to that employed on the Luger. A large ejection port on the right side helps to assure positive ejection of the empty shell. An eight-round magazine is utilized with a very strong internal spring, virtually necessitating the use of a loading tool that is provided in every military holster. The issue flap holsters also contain two extra magazines and a cleaning rod. Although both the L35 and M40 have the grip frames configured for the attachment of a wood and

manipulation with gloved hands. Not long after production started, the M40 was graced with a barrel shoulder that looked like a hex nut. This enabled easier barrel replacement. Early barrels had a ramped front sight base, while most production guns utilized a more upright rectangular base. The fixed sights on these guns are satisfyingly large and visible. The Swedish guns had different metallurgy employed than their Finnish cousins. During the war, there was a shortage of the correct grade of steel made with nickel. Therefore only the barrels were made with the short-supply alloy. The bolt and frames were made from a different grade of steel. In extensive use with powerful submachine ammo (104-grain bullet at 1346 fps), sometimes the bolts cracked. A large number of M40s had their accelerators removed to help prevent this from occurring. Many M1907 pistols were then re-issued. In 1993, Sweden officially retired the M40 and adopted the 9x19mm Glock 17 pistol as the M88. Almost all (about 50,000) of the existing military M40 pistols were

Husqvarna ranges and substantial n called by n stove.”

leather shoulder stock, very few of these were made and used, mostly in Finland.

The Finnish and Swedish Lahtis differ in only a few particulars. The Finnish models have a loaded chamber indicator above the barrel/frame junction. Initially, so did the Swedish versions, but these were soon ground off and filled in. Most of the M40s did not have this indicator. The Swedish pistols have a larger trigger guard, soon added after initial production to allow better

ordered to be melted down, much to the dismay of collectors today.

Although Sweden remained neutral during WWII, it unofficially trained refugees from Norway and Denmark, and sold about 10,000 M40 pistols to Denmark for police use after the war. Some unmarked “sterile” M40s exist which were destined for clandestine work with the Swedish military Secret Service. Thousands of Swedish volunteers went to help neighboring Finland in its battles against the Russians, and of course often took their Swedish Lahtis along.

M40 pistols are still popular in Swedish marksmanship events today, and many of these guns are still used by the civil Swedish Pistol Association. A special competition category using M40, L35, M1907 and P.38 pistols is well supported. L35 and M40 pistols are not often encountered today in the

U.S., although some M40s were imported, the majority in 1949-1950. These available specimens are eagerly sought after by collectors. Good condition arms, particularly when accompanied by their original holsters and accoutrements, are becoming more and more valuable. The classic Lahti is an interesting and innovative piece of history and deserves an honored place in any military handgun collection.

The **M2 Chronograph** comes with sensors, screens and one two-foot mounting bracket. A nylon carrying case and tripod are available options. The **CED7000 Shot Timer** is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the "next generation" Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

Cavalry Arms Medical Trauma Kits

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics.

The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll.

The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.

Personal Trauma Kit (P.T.K.)	K44-19220	\$29.95
Advanced Trauma Kit (A.T.K.)	K44-19322	69.95

*FAQ About Berry's Preferred Plated Bullets

1. What is "DS?"

"Double Struck." Double-Struck bullets go through an extra sizing process after being plated. This makes the bullet 100 percent symmetrical. This can give you an edge in competition, but most shooters won't notice the difference.

2. What is the difference between Plated/Jacketed/Cast bullets?

Berry's Preferred Plated bullets begin as a swaged lead core. The plating process works through electrolysis. The swaged lead cores are tumbled in an electrically charged cyanide bath containing high-grade copper ingots. The copper clings to the lead and the longer the bullets remain in the bath, the thicker the plating.

3. How do I load Berry's Preferred Plated Bullets?

Plated bullets occupy a position between cast bullets and jacketed bullets. They are soft lead, but have a hard outer shell on them. When loading plated bullets we have found best results using low- to mid-range jacketed data in the load manual. You must use data for a bullet that has the same weight and profile as the one you are loading. Do not exceed mid-range loads.

4. How fast can I shoot these bullets?

Velocities depend on the caliber, but as a rule of thumb, we recommend you don't shoot our plated bullets over 1200 fps (feet-per-second). Our 44s actually shoot best around 1150 fps. 45s are generally good at 850-900 fps. Our bullets are NOT recommended for magnum velocities.

5. Can I shoot your plated bullets in my GLOCK?

Yes. We have a large contingent of loyal GLOCK shooters using our bullets. The plating is thick enough that you will not get lead fouling in your bore, which is the nemesis of polygonal barrels.

*DS = Double Struck, TP = Thick Plate, HB = Hollow Base, RN = Round Nose, FP = Flat Point, SWC = Semi Wadcutter, WC = Wadcutter

About SNS Casting: SNS Casting, Inc. is a family owned and operated business located in rural Flanagan, Illinois and was officially founded by Jim Stinar in the winter of 2008. Jim's casting history actually began in the mid 1980s as a hobby. This supplied not only himself but a group of friends and fellow avid shooters who were tired of paying too much for inferior products. Eventually, word was spreading throughout the surrounding states of his bullets, which were priced right for the quality.

Today, SNS Casting features seven of Magma Engineering's Mark VIII casters and three Lube Master luber/sizers fitted with M-A Systems Collators. **Our lead is a certified factory alloy of 92 percent lead, 6 percent antimony and 2 percent tin, which is purchased in 44,000-pound lots to ensure consistent quality. The lube we use is Magma blue lube.**

SNS Casting's founder/owner Jim Stinar and his son Ryan are avid USPSA (A30909, A63666) shooters, SASS members and NRA members.

NOTICE: There is a \$20.00 minimum 'Hazardous Material' (HazMat) handling fee for shipping PRIMERS. This fee is assessed in increments of 10,000 primers. Primer orders MUST be shipped separate from other items, and require a separate shipping and handling charge. Shipping and HazMat fees are not included in prices.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

K44-21894 \$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

K44-19972 \$39.95

Stainless Steel Dial Caliper

K44-18174 \$39.95

Bore-tips™ Bore Cleaning Foam Swabs

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!"

The Bore-tips Swabs REALLY DO work. What you can't see under the foam is a plastic jig sized for a tight bore fit

which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reuseable.

Concealed Carry Tote⁴⁷

\$45⁰⁰

K44-18193

Dillon's Concealed Carry Tote accommodates all the tools you need to survive the urban jungle!

This low-profile carry case looks like a mild-mannered-computer-nerd accessory, but it's designed for your pistol as well as your PC! Made of rugged nylon fabric, with heavy-duty zippers on all three main compartments – one designed to hold a laptop computer, one for folders and paperwork, and one in the middle for a handgun.

Inside the case are pockets and pouches that will hold spare magazines as well as folding knives, letter openers, flashlights, cell phones, full-sized 8.5"x11" paper note pads, etc. Measures 13.5" x 11.5" x 6.5" deep.

'Plan B' Day Planner

Dillon's "Plan B" Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

"Plan B" Day Planner

TUFF PRODUCTS MAG POUCHES

Front view with flap.

Front view without flap.

Rear shows loops and Molle fasteners.

Tuff Products Magazine Pouches are the most versatile we've ever seen. They can be worn on a belt or attached to anything that has a MOLLE fastener system; for instance, the Dillon Range Bag, a tactical vest or body armor carrier. Available in black or coyote brown.

Comtech's STINGER

THE STINGER:

Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger today!

K44-19495 \$9.95

Arredondo Accessories' Magazine-Cleaning Brush is ideal for that little job we all dread (avoid?!). No excuse, Sir!

K44-19257 \$11.95

DeSantis Clip-Grip®

This replaces the grips on S&W J-Frame round butt revolvers. A hook on the right grip panel functions as stopping point for the revolver when tucked into your waistband.

Dillon's New Bench Wrench Fits new 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Apex Tactical Specialties Armorer's Block

Apex Tactical Specialties' Armorer's Block is designed for S&W Semi Auto M&P Pistols in all calibers, sizes and configurations, including thumb-safety models and the M&P Shield; also for GLOCK® semiauto pistols in all sizes and calibers. The Armorer's Block supports a pistol for armory work and detail disassembly. Its pre-positioned bosses, slots and holes remove pressure from critical function surfaces while pins are driven in and out. High-density polymer construction prevents marring of the frame while driving pins in and out. Made in USA.

Armorer's Block **K44-19536 \$29.95**

Grace USA⁵³ Gun Care Tool Set

This custom designed 12" x 9" x 1-1/2" case is made from durable soft Nukaf and contains a 17-piece set of Grace USA Gun Care Screwdrivers (8 ea.), Solid Brass Pin Punches (8 ea.) and a specially fabricated 8 Oz. Brass Hammer. The screwdrivers are hand-assembled and custom hollow ground to fit scope screws, plug screws, guard screws, etc. The handles are turned from quality Maine hardwood and protected with a smooth finish. Accessories for .22 LR AR-15 Conversions

TACCOM's **Enhanced Firing Pin** for Ciener/CMMG .22 Long Rifle AR-15 caliber conversions is a direct-replacement firing pin, made from 17-4 SS heat treated to a condition H900, to present a tough, hard firing pin that won't break or mushroom out after many firings. The tip has been designed to stick out of the hole only .030", so you will not damage your barrel by dry firing your weapon. **K44-19538 \$13.95**

The TACCOM **Extreme Extractor** is a drop-in part for your Ciener/CMMG .22 Long Rifle insert that will give you consistent extraction, which is KEY for a reliable firearm. This will help with your live-round extraction, depending on how well the factory has cut the chamber, and the type of chamber cut. **K44-19539 \$10.95**

Does your .22 Long Rifle insert move back and forth in your AR upper? The TACCOM **Pressure Plug** will apply a constant pressure on your insert, always keeping it in the most forward position when the rifle is in battery. You can install and remove the pressure-plug in seconds with no tools. **K44-19533 \$7.95**

Viking Tactics 35" x 23" Rifle Target

Double-Sided Rifle Target (Pkg. of 10) **K44-40057 \$10.00**

Ghost 3.5 Trigger Stop Connector

A. The Ghost 3.5 Trigger Stop Connector shortens trigger movement, eliminates over-travel and provides the fastest trigger reset. Can be fitted to all GLOCK pistols.

3.5 Trigger Stop **K44-14760 \$24.95**

Ghost Bullet and Forward Slide Release

The Ghost Bullet Slide Release was designed with a wider, longer thumb tab that is unobtrusive and sits closer to the frame when not in use. The Forward version addresses the issues of shooters who use the "modern technique" (with thumbs high and pointing towards the muzzle) by placing the thumb tab forward so that it sits between the thumbs, eliminating the problems shooters experience with the modern technique. It also places the thumb tab within easy reach of the forefinger of left-handed shooters.

B. Bullet Slide Release **K44-18630 \$14.95**

C. Bullet Forward Slide Release **K44-18629 19.95**

Bullet Trap USA's Pistol Perfect Bullet Trap

By Mark Pixler

I set up my first indoor pistol range in 1981, in the basement hallway of a rented house in Saint Francis, Kansas. My "range" was designed around Speer® Plastic Training Bullets and Cases, which were reusable molded plastic cases with a plastic projectile powered by CCI® large pistol primers. Designed for a 25-foot range, these seemed ideal for practice in my basement and came with instructions on how to make a proper backstop to contain the projectiles.

Well, you know about guys and instructions. I "sort of" followed them, using a cardboard box, some carpet scraps and old throw pillows. It was great fun until I went to put everything away after a range session. Fortunately, Colgate toothpaste and Spackle worked pretty well to fill the holes resulting from the errant plastic projectiles that managed to punch their way through the carpet scraps and old throw pillows. From then on, I moved the whole mess to the detached garage where I figured I could minimize any further damage. Since then, I've been on a quest to find a better alternative.

Earlier this year a friend told me about Bullet Trap USA, a company in Burlington, Connecticut, that manufactures bullet traps, sound abatement rooms, ventilation systems, HEPA filtration systems and perimeter warning systems that can be used to put together indoor/outdoor ranges for everyone ranging from individual shooters and gun shops all the way up to military and law enforcement agencies. I wrote them up in the March issue in order to introduce their products to **Blue Press** readers.

Rick Lamothe, the owner of Bullet Trap USA, recently called me to let me know that based on the number of requests the company had received from **Blue Press** readers for a compact, pistol-caliber only bullet trap, he developed one!

"You asked...we listened," Rick said. "Here at Bullet Trap USA, phone calls continue to pour in from shooters looking for a more compact bullet trap for mainly pistol use. So...we have been working tirelessly to bring you our smallest foot-

print bullet trap to date. This heavy-duty, steel bullet trap has the same high quality characteristics as our other traps while still safely containing the projectiles of everything from a .22 Long Rifle to a .44 Magnum. This bullet trap is up to the challenge of continual use while maintaining its reliability and ease of use. Being able to shoot in the privacy of your own home or establishment is now safer, convenient and more affordable than ever before."

Bullet Trap USA's Model BT-30x48 Pistol Perfect Bullet Trap features a target area measuring 30" wide by 48" high. Sorry guys, Amanda (left) and Janelle are not included!

Bullet Trap USA's BT-30x48 Pistol Perfect Bullet Trap uses the same tough AR500 ballistic steel construction as all their bullet trap models, featuring neoprene mounted deflection elements that flex to absorb bullet energy. There are no welds to break from repeated stress and no water, sand or rubber is used in the trap or lead-collection process.

The Pistol Perfect Bullet Trap's target area is a generous 30" wide by 48" high, and the unit can be disassembled in order to move it from one area to another. It's easily maintained and the collection pail is easy to remove for lead recycling. It can be accessorized with a filtration system for indoor use, perimeter alarms for indoor or outdoor use, sound-abatement rooms with filtration and a noise-reduction cover – everything you can think of for an ideal private pistol range!

The BT-30x48 Bullet Trap is 72 inches long, 43.5 inches wide, 79 inches high and weighs 1110 pounds without the optional filter. With filter, it weighs 1160 pounds.

Now, I've got nothing against Speer® Plastic Training Bullets and Cases – I had lots of fun with them – but the prospect of being able to shoot indoors with everything from a .22 to a .44 Magnum has me thinking about building my dream home AROUND a pistol range! Before you call your architect, though, check out ALL the bullet traps available from the folks at Bullet Trap USA.

For more information, call Bullet Trap USA at 860-673-7068, or visit their website:

THE 1911 AUTO: THE

The STI VIP is a medium-sized, 4" barreled, polymer-framed 1911 available in a variety of calibers. This one is in 9mm – and worked perfectly in the author's testing.

Kimber's Ultra Aegis II and Ultra CDP II 9mms, 3" barreled compacts, also worked perfectly in Thomas' testing.

The author used this Rock River Arms Limited Match Pistol to earn the Firearms Academy of Seattle's Handgun Master rank for the third time – or was it the fourth?

A good rendition of the Modified Isosceles Stance renders .45 ACP recoil in a full-sized, steel-framed 1911 a moot point.

By Duane Thomas

America's love affair with the 1911 auto pistol shows no sign of fading. From factories like Colt, Kimber, Para Ordnance, SIG or Springfield Armory you have a huge number of model choices among easily available, reasonably affordable factory 1911s. Step up to the custom league, and companies like Wilson Combat, Nighthawk Custom, Ed Brown, etc. will be happy to build you a gun that is a functional work of art. While the stalwart caliber of .45 ACP is still the most popular choice among 1911ists, you can also have 1911s in .22 Long Rifle, .38 Super, 9mm Parabellum, .40 S&W, .45 GAP – and others.

Among factory and custom guns you can have long slide 1911s, 5" barreled 1911s of the classic Government Model pattern, the 4-1/4" Commander-length barrel is still very much with us, then down into 4", then 3-1/2", then 3" which seems to be the current minimum barrel length we can have and still make a 1911 work.

While many folks will tell you the 1911 was originally intended to be a .45 ACP, that's not technically true. The gun that John Moses Browning first sat down to design in 1895, that eventually evolved into the Model of 1911, was originally chambered for .38 ACP, today an obsolete cartridge. However, in high pressure but externally identical guise, that cartridge lives on as the .38 Super.

Among the smaller-than-.45-bore centerfire cartridges, frankly I have not seen very many people having terribly good luck with .40 S&W chambered 1911s. I have not personally had much luck with full-sized or mid-sized 1911s in 9mm Parabellum – the exception to that being an STI VIP, 4" barreled, medium-sized 1911 I had in for test and eval that worked superbly. However, I have had in two 3" barreled 9mm 1911s from the Kimber Custom Shop, one each Ultra Aegis II 9mm and Ultra CDP II 9mm, both of which worked flawlessly. My personal compact 9mm 1911, built up for me years ago on a custom Caspian Officer's ACP-

GUN OF THE FUTURE

Though the author currently carries a 9mm Glock, he has carried a single-stack 1911 .45 for years in the past, and is sure that one day he will again.

Modern shooting techniques like the straight-thumbs grip have pretty much debunked the myth of the “uncontrollable, hard-kicking 1911 .45 auto.”

The 200-gr. LSWC, and the full-caliber .45 holes it cuts in paper targets, make it an interesting and fun option for .45 ACP match ammo.

1911s today may be had with machined rails to accept the popular and very useful weapon-mounted flashlights. (Famous firearms instructor Ken Hackathorn shown with a 1911 rail gun fitted with a SureFire X200.)

length slide and frame, with a custom 9mm barrel from BarSto, has also proven quite reliable. In 1911 land, in 9mm Parabellum, in my experience the small guns seem to much more easily want to give up the reliability than the larger guns.

In IDPA, the sport's Custom Defensive Pistol division of competition is .45 ACP only, no lesser cartridges need apply. In USPSA's Limited-10 division, the single-stack 1911 .45 with 10-shot magazines is a very popular choice. For some reason in Washington state where I reside, the single-stack 1911 .45 auto is a very popular choice as a carry gun. Years ago when famed firearms instructor John Farnam was here to teach he commented, "I haven't seen this many cocked and locked 1911 .45s in one place since the last time I went to Gunsite." I believe that has a lot to do with Washington state's rich history as a venue for combat pistol competition. I have been told that the Renton Fish & Game Club in Washington state is one of the oldest IPSC clubs in America.

Modern shooting techniques like the Modified Isosceles Stance and the straight-thumbs grip have pretty much put paid to the old myth of the “uncontrollable, hard-kicking 1911 .45 auto.” Though smaller and lighter 1911s do exist, the VAST majority of people I've ever seen actually carrying a 1911 on a daily basis have been toting a full-sized, steel-framed, 5" barreled, Government Model-sized gun in caliber .45 ACP. I have done so for years myself, and though I have, these days, defected to the Austrian polymer technology (read: Glock 17), I am morally certain I'll carry one again, myself.

I won my IDPA state championship in Custom Defensive Pistol division with my Wilson Defensive Combat pistol, at the time my carry gun, firing Laser-Cast 200-gr. LSWCs. I have to admit I do miss those full-caliber .45 circles cut out of targets, and the periodic comments by scorers of, "DAMN, those are big holes."

Duane's site is www.self-defense-handguns.com.

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is used in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	K44-15571	\$7.95
Slide-Glide Lite	K44-15572	7.95

Micron UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

J. Dewey Mfg. Co.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits all AR-15s and AR-10s with standard and oversized take-down pins up to .316" in diameter.

To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

Evolution Gun Works
 These two-piece flat checkered mainspring housings with bolt-on mag wells are similar to the patented one-piece S&A design. The mag well and checkered mainspring housing are machined from solid bar stock steel and can be used without the mag well attached, although there will be a small dovetail below (this does not impair function). This is a great replacement for plastic mainspring housings on full-size or commander model 1911s.

ElZetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

 C. Std. Front Bag **K44-10881 22.95**
 D. Rear Bag **K44-10882 26.95**

*Sand not included.

The Dillon Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snapper-release buckles. Dimensions: 66" x 27.75"

K44-18146 \$65.00

TARGET SPORTS® TACTICAL

This three-piece shooting bag set is an incredible value for the money! The bags are made of durable, water-resistant 600 denier polyester and provide a steady and solid shooting system for long guns and handguns. I filled the ones in the photo with walnut tumbling media and found them to be easy to fill and much lighter to carry than when filled with sand.

K44-15384 \$19.99

72 FROGLUBE CLP

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products. Frequent use will keep firearms running at optimal performance and not harm the FrogLube coating.

Millett Designated Marksman Tactical Scope

The Designated Marksman Scope fills the requirements of the law-enforcement officer, rifle shooter, and the big-game hunter who needs a quick sighting system at ranges of five to 500 yards. The "Dot in a Donut" reticle allows for fast, natural aiming. The shooter's eye lines up the circle at close range, and the one-MOA dot gives accuracy at the longer ranges. Range estimation is straight forward by use of the circle out to

500 yards. Compact design, 30mm tube and bright illumination of the reticle are just a few of the many features of the DMS-1. Bright red illumination of the reticle adds to the quickness of the sighting system in day and low-light conditions. At one power it works well as a reflex sight and at longer ranges the four-X magnification gives increased accuracy.

K44-19458 \$249.95

Bushnell Trophy TRS-25 Ultra Compact Red Dot Sight

Bushnell's Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell's high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute of angle dot.

K44-11643 \$89.95

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle K44-25374 \$79.99
Scout Scope Mount for SKS Rifle K44-25373 78.99

Tactical Sports 45° Offset Mount

A twist of the wrist is – quite literally – all it takes to switch from your long-range optic to a CQB red-dot sight with Tactical Sports' 45-degree Offset Optics Mount! Fits most Picatinny rails. (Pictured with Bushnell's TRS-25, which is NOT included!)
45° Offset Optic Mount K44-14472 \$14.99

90° C-More Mount

You won't believe how much this will decrease your times from initial sight picture and target transition. You'll never lose your dot...and finding it has NEVER been easier! Turning your C-MORE (Railway or Slide Ride) 90 degrees and eliminating the rail mount will lower your dot by as much as 1" to the bore of your pistol...and lower is just going to increase your speed. And when you do torque your pistol, you'll find the dot just that much easier. Designed by Bearcave Machining and offered by TACCOM, LLC.
Ruger MK1 (pictured) K44-19535 \$79.95
Browning Buckmark K44-19534 79.95

Millett's 100-percent aircraft aluminum alloy mount allows you to attach your optics or accessories on a Picatinny rail while maintaining co-witness with your iron sights. For added versatility, the mounts are equipped with removable shims for 1" to 30mm tubes.

How do you make a Savage rifle even more accurate? Well, as the adage goes, you can't kill what you can't see, so you include a Nikon 3-9x40 BDC reticle scope, mounted and bore sighted. This unique reticle can be ballistically matched to your exact cartridge using Nikon "Spot On" Software. Coincidentally, the price of the New package is "Spot On" too. See your favorite Savage dealer for details.
