DESIGNED WITH THE TOUGHEST STANDARDS IN MIND BUILT TO PERFORM IN THE HARSHTEST CONDITIONS

RUGER AMERICAN PISTOL™

Anything Else Would Be Un-American.™

Designed with the latest U.S. Military standards in mind, the **Ruger American Pistol** is built to perform in the harshest conditions. A true American innovation, this pistol was developed through a rigorous "Voice of the Customer" process—where numerous law enforcement and military trainers, firearms experts, distributors and retailers provided input, feedback and testing in the determination of the form, function and features of this firearm. The resultant new pistol is a revolutionary platform for Ruger, one that utilizes the combination of a recoil-reducing barrel cam (which is designed to better spread recoil energy over time) with a low mass slide, low center of gravity and a low bore axis to provide an unparalleled shooting experience.

Dillon's RF 100 Automatic Primer Filler

3

***Eliminates the need
for primer pick-up tubes!***

***Fills the primer tube
while you reload!***

***Clear polycarbonate shield
and protective housing***

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$48.95 each.

We READ Our Mail!

Just a brief note to say how saddened I am on hearing of the passing of Mike Dillon and please accept my condolences on this loss. Having had my XL650 for over 20 years and enjoyed using this splendid piece of engineering to load hundreds of thousands of assorted rounds. I have experienced your top-notch customer support and technical assistance first hand and appreciated the quality of everything I bought from your store. Mike's loss is like losing a member of the family. Mike's legacy will endure, like his outstanding reloading machines, for a long time to come. He will always be remembered as the man who built a reloading empire one satisfied customer at a time. He is and always shall be "True Blue."

Paul C Salters MS – Walnut Grove, MO

How do you improve *The Blue Press*? Stay like you are on content. I punch a hole in the corner like the old almanacs had and the last three issues reside in easy reach. I keep two to pass on to friends. The one featuring Mike will stay right where it is.

Jack Greider – 260402562@vtext.com

Many years ago I called to order the revolutionary Dillon RL 1000. Mike Dillon answered and took my order for Serial Number 22. Since then, my sons and I now own nine more Dillon presses. Mike's life portrays a great American as well as inventor and, I'm sure, many other attributes that I don't know about. I felt a great personal loss at his passing even though I have never met him. I would like to read more about his life in *The Blue Press*. God Bless him.

A CLEAN BREAK FROM THE PAST

Ruger Mark IV Target .22LR

Reviewed by Peter Caroline

Ruger introduced its now classic Standard Model .22 semiautomatic pistol in 1949, and has since reintroduced it with various improvements as the Mark I, II and III. I've owned at least one of each series over the years, and have had no complaints with performance, reliability or accuracy.

Taking the gun apart to give it a thorough cleaning is easy. Putting it back together again is another matter, and my young daughters learned several unwelcome new words while I acquired some expertise in that procedure.

Now, the folks in Prescott have taken pity on us mechanically inept souls and bestowed upon us the Mark IV, which is indeed a whole new ballgame. While the outward appearance is in most respects quite familiar, there is now a recessed button in the back of the frame. Push the button, and the upper receiver can be tilted up and taken off, very much like a shotgun barrel. You can then slide out the bolt and clean the gun from the chamber to the muzzle, as it should

“The folks in Prescott have taken pity on us mechanically inept souls and bestowed upon us the Mark IV, which is indeed a whole new ballgame.”

be. No bore snake required. Reverse the process, and it's all back together again, with no effort or foul language. Hallelujah!

Also new is the grip frame, which is now CNC machined from a solid block of aluminum. The pistol now looks and feels more solid and substantial than ever before. Checking out the controls, I was gratified to see an ambidextrous safety, a more easily operable bolt stop and a magazine release that actually propels an empty magazine out with great vigor. The Mark IV uses the same magazines as the Mark III, which is a good thing. There is a magazine disconnect safety, which may or may not be a good thing, depending on how you feel about such features. The previous model's internal key lock and loaded-chamber indicator have been removed in the interests of improved feeding and function.

The Target Model Mark IV that Ruger sent me has a 5-1/2" heavy bull barrel with a target crown, and weighs a comfortable 35.5 ounces. The rear sight is adjustable for both windage and elevation.

Both front and rear sights are removable, and the receiver is drilled and tapped for a Weaver®-style rail, so you can mount whichever optics your heart desires. The standard target sights are just fine...black and square, no dots, and sufficient daylight visible on each side of the front sight, even for aging eyes.

The grips are checkered black plastic, secured with hex screws. I found them very comfortable, and conducive to a steady hold. The grip angle is, as far as I can tell, the same as it has been since 1949, and Ruger isn't about to mess with success.

At the range, I noticed that loading the two 10-round magazines was a bit of a chore. The mag springs are quite tight, at least initially, and a simple loading device...even a piece of 1/4" lath with a rectangular cutout...would be a welcome accessory. Your best bet would be to keep both magazines fully loaded for a while when the pistol is not in use.

The accuracy of the Mark IV Target leaves nothing to be desired, either offhand or from a rest. The trigger pull was initially in the 5-1/2-lb. range, but got down to 5 to 5-1/4 after about half a brick of Aguila "SuperExtra" .22s. I ran several magazines of assorted .22s, and the Mark IV had no hang-ups, and no particular preferences. Actually, none of the Ruger Mark-whatever .22 pistols I've owned have been the least bit fussy about what they were fed. Shooting at golf balls offhand is a delightful

experience with this gun...most of the balls simply disappeared after the first shot!

According to the people at Ruger, the Mark IV Target is the first of a whole new family of .22 handguns. It certainly should be a most welcome addition to any shooter's armory. At an MSRP of \$529, it promises to be one of Ruger's most popular offerings.

Reloading Dies and Caliber
Conversions sold separately
(see the back of the order blank
in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount N61-22051 \$49.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

N61-16627, \$84.95

PRIMER SYSTEM EARLY WARNING KIT

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system.

N61-20302, \$25.95

AUTO POWDER SYSTEM

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency.

N61-20251, \$92.95

OPTIONAL MAGNUM RIFLE POWDER BAR

N61-21353, \$31.95

AUTO EJECT SYSTEM

Greatly increases your ammo production capabilities and adds a Cartridge Chute/Bracket and a Cartridge Bin to your reloader.

N61-22120, \$31.95

AT 500 POWDER DIE

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "belling" adjustment.

Powder Die: N61-16629, \$19.95

Oversize Die: N61-16626, \$19.95

Plastic Funnel: N61-16617, \$5.95

POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL 450, AT 500, BL 550 or RL 550B. (*Requires the use of an RL 450 powder die – see below.*)

N61-20029, \$23.95

RL 450 Powder Die:

N61-20308, \$21.95

RL 550B

STANDARD FEATURES:

- Accommodates Over 160 Calibers
- Uses Standard 7/8" x 14 Dies
- Loading Rate: 400-600 Rds./Hr.
- Comes With One Caliber Conversion
- Interchangeable Toolhead Assembly
- Automatic Powder Measure
- Automatic Primer System
- Lifetime "No-B.S." Warranty
- **RISK FREE 30-Day Trial!**

XL 650 (Electronic Scale)	N61-22118	266.95

Dillon's Strong Mounts

increase your machine's "foot-print" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

Square-Deal-Only Wrench	N61-19970	8.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	N61-97126	\$149.95
----------------------	------------------	-----------------

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	N61-16306	\$41.95
--	------------------	----------------

Dillon's Roller Handle gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Dillon's Case Preparation Equipment

CV-2001 N61-20493 \$189.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

CV-750 N61-19455 \$145.95

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To

CM-2000 Case/Media Separator N61-20675 \$75.95

CM-500 Case/Media Separator N61-21045 \$47.95

accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers: Case Cleaners are available in 220 volt!

Euro CV-2001 N61-22047 \$214.95
Euro CV-750 N61-19473 \$170.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run.

Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **N61-13804** **\$8.95**
Case (20 pc.) **N61-20255** **135.95**

Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

Short Trim Die Toolhead**

N61-62219
\$224.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. *(NOTE: the Blue 1050 toolhead stand - Part Number N61-62200, \$49.95 - is not included.)*

Dillon's New Rapid Trim 1500 Case Trimmer ²³

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **N61-62164** is **\$330.95**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **N61-13141**, are **\$19.95** each. Upper lock rings, **N61-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Dillon's Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access, has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle's "Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

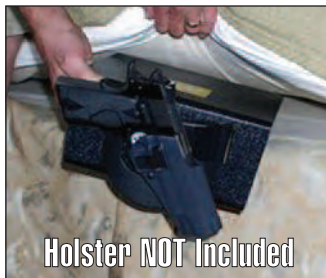

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original. This belt is a favorite with law enforcement, military personnel, fire-

fighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

ANNOUNCING: Mr. Bulletfeeder® by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

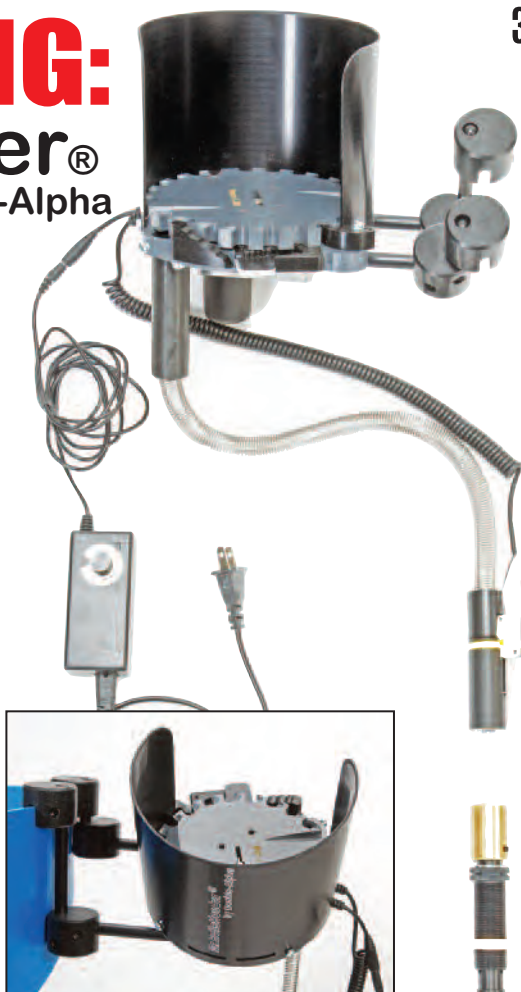

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collar to be mounted onto the case-feeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Dillon's Pistol Die Sets

Size Die

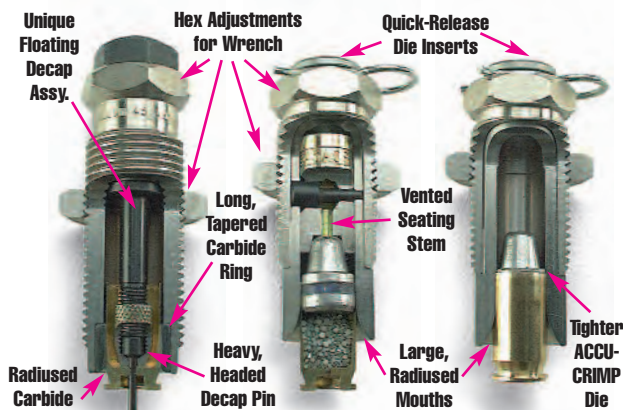

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the tool-head and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a head-space case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

36 Mr. Bulletfeeder Convert?

By Larry Drake

Recently I received a bullet feeder in 9mm with the request that I review it. The bullet feeder in question is the Mr. Bulletfeeder® by Double-Alpha. I've never used a bullet feeder before, even though I have a passing familiarity with the inventor, Rick Koskela. He was one of the competitors that often turned up at our local matches and when the bullet feeder first came out, I saw it at the range quite often. It looked sort of jury rigged from stuff you would find at your local hardware store in the plumbing aisle. I often sat, waiting on my friends to show up for the match, and listened to Rick promoting the product, but also supporting those who'd bought it. They all seemed happy with it and when something went awry, Rick was there to help them out, whether it was a user-induced error or a product issue. Regardless of the rough appearance of those early models, shooters were flocking to it and the popularity of Rick's machine grew rapidly.

Fast forward from the old plumbing-fixture days to 2017, and the Mr. Bulletfeeder looks VERY different. The concept remains the same, but slickly produced parts and improved manufacturing processes are evident. There's no hint of the "hardware store plumbing aisle" in the current product. Even though I wasn't convinced I "needed" a bullet feeder, I was eager to give it a try and see what all the fuss was about. Who knows, maybe I'll like it? Heck, I didn't think I "needed" a case feeder until I used that and now I REALLY like my case feeder.

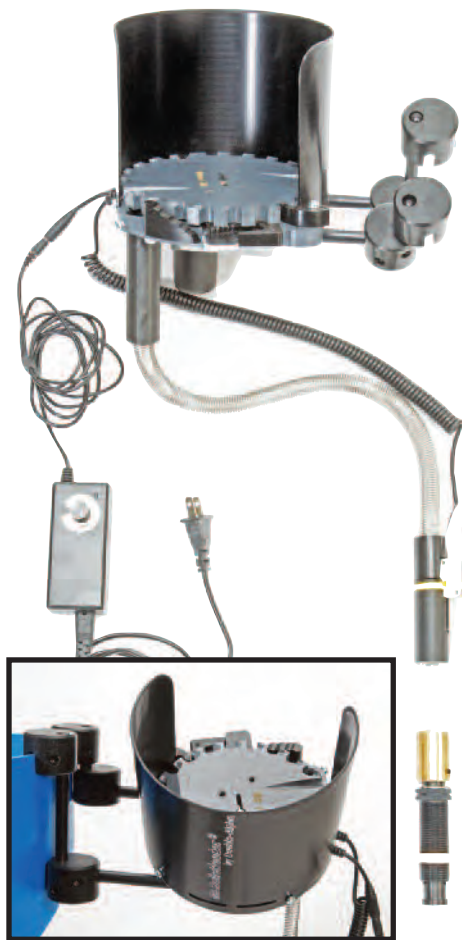

Setting up the Mr. Bulletfeeder was pretty smooth, with only a few minor things that slowed me down a bit. The first wasn't such a big deal – I just got a little hung up on installing the "Dropper Assembly." The instructions state that you should turn the dropper, which has been preloaded with five or six bullets, and then "continue to screw the threaded body down until you see that the inner

section stops moving down – it has made contact with the rim of the case beneath it. Very slowly continue to screw the threaded body down until you hear and see the column of bullets inside the tube drop down." Then you turn the threaded body another quarter-turn and tighten it by hand. Please note that several times they warn against over-tightening the locking nut. Doing so will break the threaded body. Hand tight/snug is fine.

To fine tune the setup, I had to go back and turn the threaded body down a bit more. It seems my once-fired brass has greater variance in case length than I had tuned the feeder to accept. The result of which was that several cases had no bullets. A slight adjustment had this corrected and the feeder has performed flawlessly since.

During the installation of the "Collator Mounting System," I hit another minor snag. The instructions state, "The right image shows the setup for a 650, on which the bullet feeder is mounted with the case feeder to its left." Now there may be some people who – for whatever reason – feel the need to mount the bullet feeder on the right side of the case feeder, which would follow with "the bullet feeder is mounted with the case feeder to its left," but for my setup it did not work. There is another section of instructions that clarifies this by stating, "The symmetrical design of the new mount enables you to mount the bullet feeder collator so that the case

feeder is on its left or its right. When mounting to a 1050, the case feeder will be to the left of the bullet feeder, and when mounting to a 650, to the right." That cleared up the matter and reinstalling on the correct side was no big deal. If you install the bullet feeder so that the output spring pulls on the dropper assembly, it will not drop back into place and bullets will fall out. Once tension was off of the output spring, the dropper assembly was moving freely and the bullets were dropping into the prepped cases and not onto the bench.

Once setup was complete, I got started making some ammo. So far, I've made several thousand rounds with various bullet types and haven't had to adjust the feeder for any of them. There were two upside-down bullets and two that just jumped right out of the case and flew across the bench when the press indexed. Those last two, the jumpers, were probably caused by some funny once-fired brass, or it could just be that I didn't adjust the special powder funnel down quite far enough. It didn't bother me enough to fix it. I'm not sure why the two bullets turned upside down, but it wasn't a big deal to just flip them over and continue on. If two upside-down bullets are all I'm going to get out of several thousand reloads, I don't think I'll bother to troubleshoot the problem.

For contrast, let's talk about my Dillon RL 550B. I have it setup in .45 ACP and it just so happens I need some .45s for an upcoming IDPA match. I don't shoot a lot of .45 these days, but I really hate changing the priming system on my 650 (I know it isn't that hard to change out, I just don't like doing it, okay?) so having the 550 setup for all my large-primer reloading has been really nice. My 550 doesn't have the case feeder or the bullet feeder so we're going "manual operation" on both of those processes. This, for me, is slow, but there are fewer distractions along the way.

With the 650 and all its bells and whistles, I can load 100 rounds every five minutes. I'm at about half that pace with the 550. Manually placing the brass and bullet in place and then flipping the indexer take more time, but there's a rhythm to it that is almost calming. It usually takes me a few minutes to hit that rhythm, but once I get going, it moves pretty fast.

So, all in all, the 550 is just a workhorse. Slow, steady, reliable and it makes me appreciate not only the simplicity of the 550 itself, but also the mechanized conveniences offered by the 650. I like that "old reliable" 550 when I've got to get a few hundred .45s cranked out, but there's something to be said for the 650 with its case feeder, auto indexing and, yes, even the bullet feeder doing all the work for me, while all I have to do is pull the handle and crank out rounds. Especially when I need to get several thousand done.

So am I a convert? I'd say I am. Especially for those calibers I shoot a lot of like 9mm and .38 Short Colt. If I shot more .45s I might even consider getting the caliber conversion and switching my 650 over to large primers for the task. It's kind of nice being able to get the reloading out of the way and get back out to the range. Maybe next I'll try out the primer tube filler. I was never sure I needed that either.

Silly Things You've Seen at IDPA Matches

By Duane Thomas, Illustration by Paul Kirchner

While IDPA shooters, most of us anyway, are of course totally squared-away, pro-skill-level pistoleros and steely-eyed dealers of death, you do see the occasional thing at a match that just leaves you shaking your head and thinking, "Really?"

At local monthly matches there is a tendency to not care terribly much if new shooters have totally legal equipment. That's cool, I'm not putting that down. Someone wants to shoot their carry gun and gear at a match; they want to run it all the way they actually carry it, who cares? I don't. Have at it.

So we get this new guy out at a match, he's on my squad, and he just seems a little...off. Not in a dangerous way, and I'm not one of those people who ridicules those who approach IDPA as real-life training as "Tactical Timmies" or whatnot, but this guy just seems a bit paranoid. Walking around with his chest stuck out. Jaw, too. Just really weird body language that kind of screams, "I'M A HANDGUN MARTIAL ARTIST, B'GOD, I'M HERE TO TRAIN." And he's just the wimpiest looking Caspar Milquetoast-y guy you could possibly imagine.

I'm counting the ways his equipment is not legal in IDPA. Carrying the gun in a fanny pack. Illegal in IDPA. Check! Got a flashlight mounted to the gun. Illegal in IDPA. Check! Loading the mags on his Glock 23 all the way up to 13 rounds. Illegal in IDPA. Check! But again, who cares?

We shoot the first stage, it's got six targets, six different shooting positions, you start within touching distance of T1 and have to engage it while moving toward cover to engage T2. Beep! The guy draws his flashlight-equipped GLOCK 23 from his Galco fanny pack. He does (amazingly) shoot while moving. And he just dumps the entire gunload, 14

rounds. (Of COURSE he topped off, who wants to shoot someone only 13 times when you could be doing it 14?) It sounds like a machine gun. Well, a really, really slow machine gun, anyway. Slide locked back, he turns and runs for cover which is a short wall, you have to engage T2 from the left side, T3 from the right. Gets there, stuffs in another 13-rounder. Another total mag dump at T2 which is, oh, five yards away. Slide locks back. Moves to the next position. Stuffs in 13 more rounds. Another total mag dump at T3 which is likewise about five yards away. Slide locks back.

And that's it. He's done. Halfway through the stage. Half the targets still left totally unengaged, he is completely out of ammo. That's 40 rounds, gone.

We score the targets. He has not hit any of those three targets. Not. Even. Once. Not after blowing off 40 rounds in their general direction. Not even T1 he was practically standing on to start.

So, later on, I'm trying to be helpful. I say to him, "Y'know...you only had to fire two rounds per target, right? You didn't have to fire a complete magazine at every target. Doing it that way, you were completely out of ammo halfway through the stage. And you do know, you have to actually hit at least one target at least one time to get any points on-target, right?"

He puffs up like a bantam rooster and says, "I'm training for COMBAT."

"Oh...okay. You do know that in COMBAT you actually have to hit the targets, too. Right?"

Throughout the entirety of the rest of the match, he did the same thing, total ammo dump on every target, never actually completed a stage. (I was in awe of the amount of ammo he'd brought to the match.) I think he actually did hit one target. Once.

“Combat experience with the Reising showed that they had serious deficiencies

By John Marshall

As World War II began for the United States, the country scrambled to equip its ground forces with suitable weapons for combat. Submachine guns were instantly in demand, and both the Thompson and M3 SMGs were widely used and have been written about by many, including myself. However, one submachine gun that we adopted and employed has been largely ignored – relegated to a footnote in the weapons history of WWII. The Reising submachine guns were actively used in combat, particularly by U.S. Marines in the Pacific Theater of operations. Today, they are little known and not commonly encountered. There are quite valid reasons for that. I’ll pull the veil aside a bit here so we can take a closer look at these interesting firearms.

The Reising was the design of Eugene Reising, a talented engineer who had designed some civilian firearms and had once worked under John Browning. Reising had been involved in the final design of Browning’s M1911 .45 ACP pistol. In 1938, sensing that war was imminent, he began work on a new submachine gun. He wanted it to be lighter, cheaper to manufacture and more accurate than the Thompson M1928A1s then currently in use.

In 1940 he submitted his design, which used many less-expensive metal stampings in the action, to the Harrington and Richardson Company in Worcester, Massachusetts. They accepted it, and in 1941 began to manufacture the Model 50. This was a conventionally stocked selective fire weapon chambered for .45 ACP. It had a delayed-blowback action and fired from a closed bolt. This contributed to accuracy compared to the Thompsons, which fired from an

open bolt. The advantage was that there was no jar from a heavy bolt slamming home when the trigger was pulled. Twenty-round magazines were used. A few months later, the Model 55 was produced. It differed by lacking the Cutts recoil compensator used on the muzzle of the Model 50, and had a wire stock that could be folded against the left side of the weapon. Barrel length was 11 inches for both versions. The Model 50 measured 37.8 inches long, while the Model 55 was 31 inches long with the stock deployed into position for firing. Weight for the Model 50 was 6.83 pounds, with the Model 55 coming in a bit lighter at 6.2 pounds. Both had a bolt-cocking lever under the forearm. A sliding selector switch on the right side of the receiver had three positions – safe, semiautomatic and full automatic.

The U.S. Army tested the Reising in November of 1941, but due to some parts failures it was rejected. A second test was conducted in 1942, but a bolt failure again resulted in rejection by the Army despite 3500 rounds being fired successfully. Desperate for submachine guns, and with Thompsons being in short supply due to startup delays and British contracts, the U.S. Navy, Marine Corps and Coast Guard began ordering Reising in 1941. Each USMC division was allocated 4,200, with 500 going to each infantry regiment. These weapons, lighter than Thompsons, were mostly slated for officers and non-commissioned officers, as the M1 carbine had not yet been issued. The folding-stock Model 55s went mostly to Marine paratroopers and armored units. Semiautomatic Model 60s (with 18-inch barrels) were used by the USMC for training, guard and non-combat uses.

Reising Submachine Guns

gs
cies.”

Reisings first saw action with the First Marine Division in the battle for Guadalcanal in August of 1942. Marine Raiders also used them at the same time when they invaded the islands of Tulagi and Tanambogo. Marine paratroopers were equipped with Reisings when they hit Gavuto Island, facing heavy Japanese resistance and enduring incredible casualties.

Combat experience with the Reisings showed that they had serious deficiencies. The folding stock of the Model 55, in particular, had a reputation for unwanted folding and instability. The close tolerances and many complex parts of the delayed-blowback action fouled easily and did not react well to the sand, salt water and dirt found in the Solomon Islands. The bolt delay recess in the receiver quickly fouled, preventing the bolt from closing fully. When this happened, the disconnecter prevented firing completely. The 20-round magazines were double-stack, single-feed, which was the worst possible configuration for reliability. Later-designed single-stack 12-round magazines worked more reliably, but the penalty was reduced capacity. Rust was inevitable. Fieldstripping was complex and not easily learned. Jams were frequent and often occurred at the worst possible moment. The fragile firing pins broke regularly. Inasmuch as the guns were mostly hand-fitted at the factory, spare parts also required individual final finishing. This was beyond the scope of hasty field repair. In short, the Reisings became despised within the Marine Corps as combat weapons. Lieutenant Colonel Merritt A. Edson, commander of the 1st Marine Raider Battalion, ordered that his unit's Reisings be thrown into Guadalcanal's Lunga River, and that the "old reliable" M1903 Springfield rifles be used in their place.

As soon as M1 carbines became available in 1943, the Reisings were removed from issue with the Fleet Marine Force, and relegated to stateside guard duty. The government also farmed many of them out to the OSS (CIA forerunner) and to allied nations as lend-lease weapons. Some were provided to resistance forces in enemy-occupied areas. They ceased to be carried in U.S. armed services inventories in 1953. Many Model 50 Reisings finally found homes with U.S. law enforcement agencies, where they fared a lot better than in rough and tumble combat.

Nearly 120,000 Reisings were made during WWII, most of which were used by the Marine Corps. They continued to be produced by H&R for domestic law enforcement use until 1949, with over 3,000 made in the immediate post-war period. Because of their low cost, demand rose for them again, and production was resurrected from 1950 through 1957, with 5,500 more being made. After that, a 1960 foreign contract resulted in the manufacture of an additional 2,000 units, which constituted the final production run at Harrington and Richardson. H&R went out of business in 1986, and the Numrich Arms Corporation purchased their remaining inventory. Some Model 50s were produced by Numrich, utilizing original receivers and spare parts. These weapons will all have an "S" preceding the serial number.

The Reising submachine guns have a checkered past, and their reputation for unreliability in combat dogs them to this day. In fairness, kept clean and in good repair, they are decent guns. They do currently find themselves pretty much at the bottom of the SMG collector pecking order. They remain mostly curiosities – little known, but still an important chapter in U.S. military equipment.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

N61-21894 \$44.95

Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Berry's Mfg. Pan Sifter

N61-17519 \$9.99

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

N61-19972 \$39.95

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mms.

Made in the USA and comes with a lifetime warranty.

SIG Goes Striker Fired and Gets So

By Cameron Benz

For a number of years, GLOCK has ruled the roost where polymer-framed, striker-fired handguns have been concerned. That's not to say there weren't others; just that GLOCK pretty much owned the market. Then, about 2014, SIG hit the market with their P320. It continued to fly under the radar for a year or so. In my world, it sort of appeared out of nowhere and, shortly thereafter, I suddenly found myself the owner of a 9mm SIG P320 Compact that had been worked over somewhat by Boresight Solutions.

Having owned a SIG P229 once upon a time, I had high expectations for fit and finish in this SIG but I was unsure how they would do with the polymer as I wasn't a fan (to put it mildly) of SIG's earlier attempt, the SIG Pro series. As it turns out, I had no cause for concern this time around.

Once I had taken possession, I went through everything. SIGs have come in decent plastic cases for years and this one was no different. Included with this P320 Compact were (2) 15 round magazines, a passable holster, magazine, directions, a sample of Lucas Gun Oil, and the typical gunlock. I had opted for the version that didn't include night sights as I figured I'll eventually be swapping the sights out anyway.

Now, at this point, I'd like to pause and explain that my number one problem with many double column magazine fed handguns is the trigger reach, despite the fact that most of my gloves say "large." So I was pleasantly surprised to find that the medium grip module that my P320 came with actually worked for me. One of the great things about the P320 is that if the medium is too small, you can get a large grip module for a fairly reasonable price and not have to ship the gun anywhere for work. Worst-case scenario is you may, depending on your technical skill level, need to take the gun to a local gunsmith if you want a small grip module as it seems to require a slide catch change.

One detail I noted that many makers seem to overlook is the inside of the magazine well near the opening. Some companies leave lots of abrupt square surfaces that the magazine can catch on during reload. SIG actually did a pretty good job of keeping those surfaces to a minimum.

Due to the trigger module being the serial-numbered part, if you want to have a grip module stippled, you can send out the module or buy one directly from a shop and not have to deal with having a transfer done and Boresight offers. I consider that a win.

Get Love From Boresight Solutions

In these images, we can see the Boresight stippling treatment (left) next to a factory grip module stippling (right).

Takedown of the P320 is a potentially safer endeavor than with certain other pistols in the same market as the SIG does not require dry firing to disassemble. Start by making sure the magazine is removed and the chamber is empty, lock the slide to the rear, fully rotate the take down lever downward, release the slide and you'll be able to slide the slide assembly forward and off the frame. To reassemble, as usual, just do the reverse.

To remove the frame from the grip module, assuming you have already fieldstripped the run, is a matter of just pulling the takedown lever out the side of the gun (assuming it's still in the position for the takedown). Once that's done, you can pull the frame up by the front rails. As it comes up, you should notice that the rear of the frame is tucked into the back of the frame, which will possibly require some movement of the trigger on the way out. At this point, if you want to switch to a small-size compact frame, I can tell you, you will also need to change the slide catch (included with the compact frame as of the time of this writing).

In handling the pistol, one of the other notables was the trigger pull itself. While not the lightest, it is one of the smoothest I've encountered on a factory pistol and it was actually the factory trigger, as Boresight had not touched the trigger at all.

I was able to find an outside-the-waist-band holster from Blade-Tech. With a suitable holster in hand, it was off to the range. Range trips with the Boresight P320 were pretty uneventful, as the SIG P320 has proven to be boringly reliable, which is a good thing unless you're one of those warped individuals that enjoys doing malfunction clearance drills. I used the P320 to shoot Bill Drills, Dot Torture, FAST drills, and anything else that struck my fancy. I had to adjust to the grip angle some due to my usual pistol being a GLOCK 19, which has a more radical grip angle.

Accuracy was reasonable, though I suspect the gun is capable of better in more-skilled hands. I

shoot my five-shot groups at 16 yards as it's the longest range I have ready access to. Groupings were as follows:

Hornady 115-gr. Zombie Max	2.3"
Hornady 135-gr. Critical Duty	2.5"
Author's reloads Rainier Ballistics 147-gr. HP	
over Hodgdon Universal powder	2.75"
Winchester PDX1 147-gr. HP	2.8"
Black Hills 115-gr. Tac XP +P HP	3.18"
SIG Sauer's Elite Performance 115-gr. FMJ	3.25"

As I mentioned previously, this gun had an appointment with Boresight Solutions before I received it. One of the first things you notice about Boresight's treatment is that it appears far more aggressive than the factory texturing (which borders on too smooth if you ask me). The stippling is specified as their "Carry" treatment and is done 360 degrees on the grip of pistol and under the trigger guard. They also slightly re-profile for the sake of ergonomics. The edge lines are tastefully recessed making for an excellent finishing touch on their work.

As I looked the gun over, I almost missed the modified bevels of the underside of the trigger guard. Talk about a welcome addition, it makes this pistol just a bit more livable. I'm afraid if I use this pistol too much, I may lose my GLOCK callous.

If you dread the idea of sending a gun in, the good news is that you can just send in your grip module or you can buy one from Boresight Solutions without dealing with the need to ship a firearm because there's no need for the frame to be shipped.

In the end, the SIG P320 compact is an accurate, reliable, customizable package and, when paired with the work from Boresight Solutions, is a touch more ergonomic than stock and has a lot more traction available. It's a great combination. SIG Sauer and Boresight Solutions have both hit home runs with the P320.

Dillon's "Plan B" Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

RCBS Trim Pro-2™ Case Trimmer N61-43231 \$139.95

The RCBS Trim Pro-2 manual case trimmer now features a spring-loaded "universal" shell holder that will accommodate case head diameters from .250" to .625". Comes with pilot calibers: .22, .24, .25, .27, .28, .30, .35, .44 and .45.

Dillon's Bench Wrench Fits 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Elzetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

N61-14762 **\$29.95**

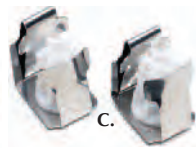

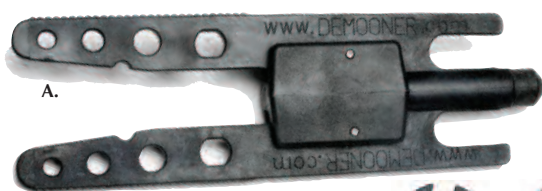

TARGET SPORTS® TACTICAL

This three-piece shooting bag set is an incredible value for the money! The bags are made of durable, water-resistant 600 denier polyester and provide a steady and solid shooting system for long guns and handguns. I filled the ones in the photo with walnut tumbling media and found them to be easy to fill and much lighter to carry than when filled with sand.

40,000 (PLUS) ROUN

By Duane Thomas

My love affair with the GLOCK 34, GLOCK's semi-longslide "Practical Tactical" 9mm, began in 2003. I'd been aware of its existence before then, of course, but never really cared enough to shoot one, much less own it. But that was the year I watched Dave Sevigny use a G34 to win the 2003 Factory Gun Nationals, beating everyone else in attendance, including action-shooting great Rob Leatham. I had no illusions that owning, shooting, carrying a GLOCK 34 would instantly allow me to shoot like Dave, but still it seemed like a gun with which I should become familiar, for my own experience level if nothing else. Little did I know I was about to meet my favorite handgun.

I ordered an article-sample piece from GLOCK, fired it in totally stock form for an article, then bought it and instantly began customizing. I dumped the horrible GLOCK plastic sights, replacing them with a set of Warren Tactical Series Sevigny-Competition sights in plain black. The stock 17-pound recoil spring went bye-bye and I said hello to a 13-pounder from Integrated Systems Management, Inc. (ISMI). I polished up the trigger components, leaving all the factory parts in place, just slicking up what was there. I applied grip tape to the handle, a Pearce grip frame plug and I was ready to rock and roll.

And shoot the hell out of this gun I did. Around the 12,000 round mark, the issue LCI (loaded chamber indicator) extractor wore out and I started getting failures to extract. I replaced it with one of the older, flat, non-LCI extractors. Not that there's anything magic about the old flat extractors, I just prefer the way they look. But maybe there was something magical about at least this one, because I haven't had a single extractor prob-

lem since installing it. Just before I sat down to write this article (literally a few hours before), I passed the 42,000 round mark through my GLOCK 34, so that makes 30,000 problem-free rounds on the "new" (read: old) extractor.

Eventually I discovered the wonders of lighter firing-pin springs, and I did run those for a while. Then during the dark days of the Great Primer Drought of 2008, when I could not find my preferred Federals and had to make do with what I can only refer to as "lesser primers," at a match I had one (count 'em, one) misfire. Since in addition to this being my match gun it was also my carry gun, that was all it took to convince me the full-power, stock firing-pin spring was the way to go, and I've used nothing else since.

Speaking of firing-pin springs, aside from that one worn-out extractor, the only part I've ever had give up the ghost on my GLOCK 34 was one broken trigger spring. Dave Sevigny had told me he made replacing the trigger spring in a G34 every 5,000 rounds part of normal maintenance. That made sense to me, so I did the same. Then my friend Jon Stein said to me, "I think there's no need to replace the trigger spring that often. You could certainly go at least 10,000 rounds." For the longest time I didn't listen to him. Really, by this time I had over 20,000 rounds through the gun, I'd stuck to the "replace the trigger spring every 5,000 rounds" proviso and I'd never had a problem. But then I said to myself, "Hm, maybe he has a point, I'll try it." Sure enough, around the 8,000 round mark I had my first – and, I assure you, last – broken trigger spring in a GLOCK. Since then it's been back to "every 5,000 rounds" and I've never had another problem.

An amusing postscript (I think), when GLOCK came out with their battleship gray, theoretically

DS WITH A GLOCK 34 ⁶³

at least more durable, trigger spring, Jon said to me, "With the new stronger battleship gray trigger spring, surely you could go 10,000 rounds without replacement and be safe." My response was, "Or I could keep on replacing the trigger spring every 5,000 rounds and be REALLY safe." What I don't believe Jon understands is that, for every 5,000 rounds of live ammo I fire, I pull the trigger in dry fire literally hundreds of thousands of times.

A strange thing about this particular GLOCK 34, specifically its frame: trigger pulls in it go half a pound lighter, even running the exact trigger components, compared to any other Glock I've ever tested. I can take all the trigger stuff in the slide and frame out of a different gun, put it in my GLOCK 34, the trigger pulls will come out half a pound lighter than they did in the other gun. I've even taken all the frame trigger stuff out of a GLOCK 17, put in in my 34, then switched over THE ENTIRE GLOCK 17 SLIDE onto the 34 frame: still half a pound lighter. So I know that wherever the "light trigger pull magic" is happening, it's in that G34 frame, not the slide. I have absolutely no idea what it is about this particular GLOCK frame that makes than happen – if I did, and I could bottle it, I'd be rich.

I carried this gun every day for six solid years, and have quite a bit since. Some might say a GLOCK 34 is an eccentric choice in a carry gun, because of its size. The Model 34 was designed from the ground up to be a GLOCK 9mm the same overall size as a 1911 Government Model. Not a small gun. But my attitude was, and is, if I can carry and conceal a full-sized 1911, which I did for years, I can carry and conceal a GLOCK 34. The main differences, of course, being the GLOCK 34 is one hell of a lot lighter and holds twice as much ammo.

This is the gun I used to get my IDPA Master rank in Stock Service Pistol division. I worked my butt off for years in order to be able to do that. The IDPA Safety Officer who ran me through the classifier on the day I got SSP Master was Robb Wolfe. When we totaled up my score, and I realized I'd made it, I cannot begin to express how happy I was. Robb said to me, "Thank you. This is the first time I've ever gotten to watch someone shoot a Master score on the classifier. I know people who've DONE it, but this is the first time I ever got to WATCH someone do it."

Over the years, I've used this gun as something of a test bed; there have been a LOT of aftermarket parts on and off it. Very few of them have made the cut to stay. One that has, recently, is the Skimmer unit from GlockTriggers. This is a GLOCK factory trigger/trigger bar modified by GlockTriggers so the trigger sits further to the rear in the "at rest" position. This removes a lot of the uptake travel for

the first trigger pull, but that's not its big selling point for me.

One of the very few things I've never liked about GLOCK, the trigger reach was long enough, and my hands small enough that, just occasionally, on the draw I'd have my index finger fail to come far enough around the trigger to depress the "second trigger" lever, and free up the trigger to move. I'd pull the trigger, it would refuse to move, and I'd get silence instead of a bang. This was the sort of thing that, in an emergency, could get me killed.

Since installing the Skimmer in my G34 – and I have since done the same thing in my G17 – I have had a grand total of one instance of the second trigger failing to be depressed, and that was when, on the draw, I got a grip so completely screwed-up I could barely get my finger on the trigger, period. So that one was on me. Other than that, because the Skimmer sits further to the rear in the trigger guard, therefore allows more of my index finger to curl around the trigger with first contact, it's done away with my tendency to fail to depress the second trigger lever. In other words, it's made the GLOCK work for me the way it should.

Arredondo Accessories makes a "+3" magazine floorplate that ups a standard 17-round GLOCK mag's capacity to 20 rounds. The resulting magazine is not too long for concealed carry, and I tote around two spares so equipped, concealed every day in a double mag pouch. I don't top off the magazine in the gun after chambering a round, so that gives me 17 rounds in-gun and 40 rounds in two spare magazines, for a grand total of 57 rounds of 9mm on my body. I have been asked, of my tendency – actually it's an inflexible rule – to carry two spare magazines for my concealment gun, "Duane, what do you think you'll ever DO with all that ammo?" My reply: "Hopefully, nothing."

Over the years since I began carrying my GLOCK 34, I have, always temporarily, been enticed away by other guns. Most notably the GLOCK 17. Because if the 34 is GLOCK's Government Model, the 17 is GLOCK's Commander. But I always go back to the 34. And I can't really say why. The logical part of my brain realizes the 17 is a more-sensible carry gun; it's shorter in the slide and barrel, thus smaller overall, but has the exact same magazine capacity. In fact, GLOCK 17 and 34 frames are identical; I mean they come out of the same mold at the factory and everything. But I just flat LIKE the 34. So much I have no problem motivating myself to practice with it. Which is why I've put more rounds through my GLOCK 34 than any other firearm, and dry fire it so much I need to replace the trigger spring every 5,000 rounds. And you know what? There's a lot to be said for that.

Extra Loading Data Labels, N61-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x

3-7/16" wide x 2-13/16" deep.

- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Description	Stock #	Each	6 ea.	12 ea.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Swab-its – A Swab for Every Job! ⁶⁵

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that “whisky-tango-foxtrot” look on his face. “Hi,” I said (*thinking fast*), “I’m trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!” The **Bore-tips Swabs** REALLY DO work. What you can’t see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is for use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	N61-15571	\$7.95
Slide-Glide Lite	N61-15572	7.95

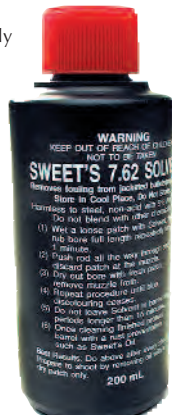

Microlon UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

	N61-75125	\$9.95
--	------------------	---------------

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

Double Duty TDU®

Trainer

Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.

Scout Scope Mounts for AK, SKS Rifles

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Everything is Not Al

By John Marshall

I've been around for way more than a few years, with firearms as my dedicated interest for most of them. I pride myself on the fact that there's not much in the gun world that I haven't seen. However, my comfort level with that last statement was shattered recently. I was blindsided by learning of some incredibly rare firearms that most folks have never seen, read about or even heard of. I received an e-mail with some thumbnail pictures of some guns that immediately surprised and intrigued me. I was advised that they were now located in my area, and I was asked if I would be interested in taking some detailed photographs of them. The e-mail was from my friend Cheryl Todd, who is one-half of the duo who together manage azfirearms.com in Avondale, Arizona. Her partner and husband is Dan Todd, the individual who went to considerable lengths (and expense) to acquire three incredibly interesting guns. The reason they have been relatively unknown is immediately apparent. They are all firearms disguised as everyday objects – obviously meant for clandestine use. These are things that one would immediately attribute only to "Q." He was the fictional gadget-maker for Ian Fleming's legendary 007, James Bond, secret agent in the service of Her Majesty the Queen of England.

How these objects were conceived and constructed is still shrouded in mystery, but they do exist. I've held them in my own hands, and took detailed photographs of them for this article.

The first of these at an initial glance appears to be a standard Zippo cigarette lighter. These are as

common as sand, and have been around since before World War II. It is visually distinctive only by being very expertly engraved in a baroque style. But this particular "lighter" is definitely not what it seems. In truth, it's a quite functional single-shot gun. Here are the particulars. This type of disguised gun is very seldom seen or offered for sale. This particular specimen is expertly engraved with fire-breathing dragons in an ornate fashion. Both sides are engraved – one side has what appears to be a male dragon, while the other has an apparent female. Provided with the "lighter" is a fitted case. The lid has a brass plate that is engraved with a skeleton hand reaching for the lighter. Inside the case are the lighter, a knurled round brass rod for spent case ejection, and a few rounds of what appears to be .22 BB cap ammunition. It's definitely a museum-quality piece, and would provide a definite surprise in a pinch situation for an undercover operator. The "lighter" loads by pulling down the big piece with the gear slots and inserting a cartridge into the barrel above it. It can then be fired by pulling the flint roller up to cock and then pushing down on it to fire. The photos here give the details of its appearance and construction.

The next object appears to be a Westclox pocket watch. It doesn't keep very good time (it's right only twice a day), but keeping track of time is not its purpose. It was made to shoot what appears to be a .22 BB Cap cartridge through the "winding stem." Such guns are quite rare and very seldom put on the market. Again, the watch has been beautifully and elaborately engraved on the reverse side with the image of a devil with

ways What it Seems

horns. There is a curious lever near the winding stem with a sinister purpose. It's the trigger. To operate the gun, one unscrews the winding stem, and pulls it out of the works. The stem is actually the barrel of the piece. A round of ammo is inserted into the chambered base of the disguised barrel, and the stem is then screwed back into the watch. If the lever is pulled out, it acts as the trigger, and when pushed, it fires the round out through the winding stem. "What time is it?" asks the bad guy. James Bond removes his pocket watch, quickly activates it, and replies, "It's time to die." In the confusion following the firing of the watch, Bond makes his escape over the balcony. Not hard to imagine!

The next item IS hard to imagine. It's a revolver disguised as a ring! You read that right. It's a five-shot revolver! This is practically unheard of. Now this one is an older artifact, probably made in the latter half of the 19th Century. It appears to be possibly originally made by Le Petit. It fires tiny and extremely rare 4 mm pinfire cartridges directly from the cylinder. The obsolete pinfire cartridges, patented by Frenchman Casimir Lefauchaux in 1835, were primed internally, with striker pins projecting sideways from the base of each of the cartridges. When struck by a hammer, the pin hits the internal primer, firing the cartridge. In this case, the hammer is the clamshell-like part

lying against the cylinder. Once pulled back and cocked, it's fired by pulling it down. The cylinder is rotated by hand. Pinfire revolvers were widely made in Europe and are not unusual to find today. I have one, given to me by my father-in-law. However anything this small is extra special and incredibly rare, particularly in pristine condition. Worn as a ring, this firearm fits unnoticed in the palm of one's hand and can be rotated around to expose the cylinder. It is provided with a felt-lined case with storage for five pinfire cartridges that have miraculously survived. It also comes with a separate blued steel cylinder (the other is brass). It's nicely engraved with a diamond and leaves pattern, and would make a fine device for Sherlock Holmes, would it not?

The engraving on all of these small covert firearms was performed expertly by master engraver and jeweler Andreas Von Zadora Gerlof. For more information on him, he has a website, (vonzadora.com). Dan Todd has informed me that these incredibly rare weapons will be put up for sale in the near future. I'm privileged to have examined and photographed them, and will be envious of the future buyer or buyers who will be lucky enough (and well-heeled enough) to obtain them! Always remember now that with respect to firearms, as with magic performances and politics, not everything is what it seems!

Trump Training Triumph ⁸¹

You thought we won when the "other guy" lost, but you know government isn't the answer

By Alan Korwin, GunLaws.com

How much do you figure Donald Trump knows about reloading?

I'll make that multiple choice to give you a fighting chance – reloading a 30-round magazine, speed loading a revolver, a tactical reload, or operating a reloading machine – and could he even name those four kinds of reloading?

Does Rush Limbaugh know his stuff when it comes to selecting reloading brass? I don't even have to ask if anyone in the public school system knows anything accurate or truthful about anything relating to guns or the Second Amendment.

The truth is, Donald John Trump, our thought leaders, the majority of all our leaders and at least half the public is basically stuck in Ignorantville when it comes to the most fundamental working symbol of freedom, our firearms. Reloading is such a narrow niche in that scheme of things; I'll bet most members of Congress can't accurately tell you what it is or how it's done.

If we're smart, that should all change now. Quickly. With wonderful benefits for everyone. And for America.

We are so used to fighting a life-or-death struggle for the very survival of our rights, against the very government that is supposed to stand four square in defense of those rights, we are practically set off balance by the idea we may have a commander-in-chief and chief executive who is pro-rights on the gun issue. What a stunning breath of fresh air that would be. What do we do with it?

So many people seem to be clamoring for new laws. Laws to grant rights we have lost. More laws. That's what the other side wanted. OK, it has some logic to it; something has to be done about the infringements and usurpations we the people have endured for so long. Be careful what you wish for though – you might get it. "More laws!" was not our rallying cry a short while ago. Maybe you're really interested in repeals. Think about that. I'll address it on **GunLaws.com** soon.

Let's look instead for now at changing the entire public landscape, the mindset, replacing ignorance and fear with education and awareness. For all the left wing's incessant noisy complaining that gun owners are closed-minded ignorant redneck Neanderthals, parroted dutifully by the "news" media, it turns out we're the ones that do know what reloading is, how guns work, what the safety rules are, how to shoot straight, and why people own guns. It's up to us to shift the narrative and spread the word.

Mr. President, we need to introduce real gun-safety classes in schools. Mr. Limbaugh, half of all American homes have guns – a few hours of time in a 12-year school career is barely enough but it's a start. Encourage schools to do this voluntarily. Use Arizona's marksmanship law for elective classes as a model (A.R.S. §15-714.01).

People – especially teacher's unions who won't stop arguing to maintain ignorance – must be stopped from preventing progress. They can call themselves progressives, but that is exactly what they are not. Think what it would do for national preparedness if every High School Diploma included one credit in Marksmanship. We had a competition rifle team when I was in high school, it built character. Students earned varsity letters in shotgun. Only political correctness (which is really cultural Marxism) tore these fine traditions from our classrooms and curricula.

The ranges in our area are eager to donate time for schools to bring kids down on a field trip. Yours will be too. Working closely with instructors, teachers and parents, they can give students first-hand experience in one of the safest sports in the country, far safer than soccer, basketball, football, hockey, baseball, rugby and skating, combined. Little could provide a more positive incentive on staffing our armed forces than to have young adults who understand riflery and gun safety.

When your predecessor was in office, he coerced and provided funds to broadcasters and the Ad Council to promote ideas that denigrated healthy involvement with firearms. His 15-point executive order, given mindless support by the press, was entirely focused on reducing access to firearms and the number of gun owners in the nation. He all but hid the valuable history that arms played in America's founding and our role as the linchpin of freedom on the planet for more than two centuries.

America's voices – from the bully pulpit, the airwaves, in print, online and from public spaces – can encourage the population to rediscover a wholesome, family-oriented, scholastic and historic reintroduction of the value of firearms, properly and responsibly owned, in the deepest folds of the fabric of the United States. It is time to reinvigorate a culture of marksmanship in this great nation, for all the right reasons.

You reading this have a role to play. Take pride in your marksmanship skills. Talk up the idea of firearms training in schools, for church groups, range time as social activity instead of movies. Help the culture of marksmanship gain a foothold in this great land again.

Making Ammo: A Beginner's Guide to Handloading by Kyle Lynch – Ammo shortage? Not anymore! Learn a new hobby that will save you money and ensure that you always have enough of the right ammunition for your shooting needs. This guide offers you an opportunity for first hand information from an experienced reloader as he takes you through the reloading process. Examples explain what works and what doesn't. If you are new to reloading or want to understand the fundamentals more fully, this guide provides simple step-by-step instructions.

N61-43270 \$23.95

Legally Armed: A Concealed Carry Gun Law Guide – Learn the basics of concealed carry and the laws associated with this astronomically growing group of self-reliant Americans. If you depend on a handgun for the protection of yourself or your family, arm yourself with knowledge, too. What's inside? What to consider before carrying a firearm • Protecting oneself: discharging a firearm in self-defense • What to do when interacting with Law Enforcement • Gun handling, practice and storage • State-by-state quick reference guide to carry laws where you live and travel.

N61-43269 \$14.95

Armed & Smart: A Beginner's Guide to Concealed Carry – If you are new to concealed carry and need a great resource for information, this is the book for you. This book covers all the basics a beginner needs to know.

Before you make the decision to exercise your Second Amendment right to bear arms through concealed carry, you should consider factors like what type of gun is best for carry, when to carry a firearm, how to carry concealed, and why you should carry a concealed firearm.

We carefully cover handgun safety and the proper steps for using and caring for your firearm. Other topics include cartridge selection, accessories available, practice techniques, and range etiquette.

N61-43232 \$16.95

Armed & Smarter: Advanced Concealed Carry Weapons & Training – Once you have mastered the basics for carrying your concealed firearm, you need a book to build on that foundation and hone your skills to those of an intermediate-level handgunner. After obtaining your concealed carry permit and securing a firm grasp of the responsibilities attendant to carrying a concealed firearm, it's time to focus on becoming an excellent marksman.

In *Armed & Smarter*, our authors prepare you, the shooter and gun owner, to handle and use your handgun responsibly. By the end of this book, you will understand the importance of strong habits and perfect practice.
