RUGER[®] COMPACT HANDGUNS

Ruger offers lightweight, compact handguns for every personal protection need.

380 AUTO LCP II

The LCP[®] II features a short, crisp trigger pull with single-action feel, inner trigger safety, improved sights, a larger grip surface and an easy-to-rack slide with an improved slide stop mechanism with a last round hold-open.

9MM LUGER LC9S[®]

Chambered in 9mm Luger and sized just slightly larger than the LCP[®], the LC9S[®] is compact, powerful and features a short, light, crisp trigger pull for faster shooting and improved accuracy.

380 AUTO LC380[®]

The LC380[®] provides 7+1 rounds of effective .380 Auto personal protection. Slim and lightweight for easy concealment, the LC380[®] combines reduced recoil with modern safety features in an easy-to-rack design.

22 LR, 22 WMR, 38 SPL +P, 9MM LUGER, 327 FED MAG, 357 MAG[®] LCR[®]

Now available in six calibers, there is a lightweight, reliable and easy-to-shoot LCR[®] for every need – from personal protection to low-cost practice at the range.

Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$48.95 each.

What A Man!

What a man Mike Dillon was, on that we all agree. Worldwide, many have benefited from his generosity.

Though he was very successful, you'd never know. Because he was too humble of a man to let it show.

Respected and loved by everyone who knew him, Behind his quiet demeanor was a pure, unadorned gem. He was the epitome of what we all should strive to be.

A man among men, what you saw you would always see.

For he never wavered in integrity, graciousness or kindness.

Genuine through and through, he was truly one of the best.

When he extended his hand you knew you'd made a friend.

That's just who he was, someone on whom you could depend.

His sense of humor and sense of fun brought joy to so many.

The wisdom he imparted was worth more than a billion pennies.

He was quite tall in stature but he was even taller in heart.

Intelligent and wise, though he wouldn't own up to his smarts.

Just an ordinary guy is how Mike always thought of himself.

Accolades that belonged to him, he gave to everyone else.

He was the finest example of humanity in this vast, great land.

Mike may have been a mere mortal, but, oh what a man!

“The American Dream Realized”

One year has elapsed since the passing of Mike Dillon. Our memories are full, our hearts are full, and our plates are full. Our efforts as a family have been to continue his legacy and the work that Mike pursued. The employees of Mike’s two companies, Dillon Precision and Dillon Aero, have likewise strived to continue his commitment to old-fashioned ingenuity, respect for others, and honest business practices that build consumer confidence and loyalty.

Mike epitomized the American Dream: coming from humble beginnings, trading his labor for flying lessons in order to become a crop duster, fire bomber, and airline pilot.

Mike’s love for historic aircraft led him to restore a “likely to have been scrapped” Curtiss P-40N back to original flying condition. In 1965 he sold that airplane (N1226N) to the Commemorative Air Force, its current owner and operator. Mike was one of the first of many to go on to restore and preserve historic aircraft. Years later he restored and operated a Temco TT1

Pinto Jet (the first jet-powered Navy primary flight trainer aircraft), which he subsequently donated to the Naval Air Museum in Pensacola, Florida.

In the 1970s, while employed by TWA, Mike pursued a second career flying vintage aircraft as a writer and photographer for the then-popular *Air Progress* magazine. He was always fond of his time spent with *Air Progress*.

Enter now, since childhood, his love of guns and shooting. His initial efforts to economize the expense of shooting resulted in his designing and marketing a conversion kit for an existing machine called a Star Reloader. The Star Reloader, manufactured by Star Manufacturing, was only capable of loading small pistol cartridges; but, in the mid-70s, AR-15 rifles were becoming popular and there was a need for inexpensive .223 ammunition. Mike’s

conversion kit allowed the Star Machine to load .223 rounds. From this, Mike’s new company, Superstar Manufacturing, was born – in his garage. After his initial foray into the reloading industry, in 1977 Mike decided to design his own machine. This was the RL 1000, and with this machine came a new company – Dillon Precision Products. Many products followed, all designed to fill needs that he felt the industry had neglected. His designs were good, but it was his past experience as a writer and publisher that provided him the crucial link to success: the catalog – the one you are reading now, designed to entertain as well as advertise

factory-direct service with a toll-free telephone number.

From these simple beginnings, our dream came to life. It has been a full, exciting and colorful life. We met so many wonderful people along the way who have contributed to the success of Dillon Precision, many of whom have become treasured friends. Mike’s involvement with the shooting sports was ongoing and continues today

Left: Mike donated his UH1H (Huey) helicopter and his services as its pilot to the rescue and recovery effort after Hurricane Katrina in 2005. Right: Mike in the Huey with his beloved Doberman Pinscher, Bo, in 2014.

as a deep commitment with our family. Mike’s involvement with the NRA is enthusiastically supported by each one of the family. I will lift the words of one of Mike’s dearest friends, Nyle Leatham, who wrote, “Although he would laugh at the appellation, Michael Dillon is an intellectual and a self-taught philosopher. He is an intense reader and political thinker who places high value on the respect of human rights and the limitation of tyranny. He is an example of old-fashioned ingenuity and shrewd business venturing based on respect for the customer and selling products worthy of pride; in short, the American Dream realized.”

and Christopher Dillon**

Which Dillon is Right for YOU?

Page 8

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550C

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls for each ear
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

THE BOND BULLPUP PISTOL

By J. B. Wood

When you think of Bond Arms, you immediately think of their ultimate re-design of the Remington "double-derringer." Well, think again – they are now making a fine little auto-pistol, a 9mm sub-compact. In both history and mechanical operation, it has quite a story.

It began about five years ago, in White Bear Lake, Minnesota. Design genius Arne Boberg decided that there was a problem with sub-compacts in 9mm: Velocity. In all of them, the rifled portion of the short barrels usually was only about two inches, or less. Thus, even with hot loads, the bullet never reached optimum speed.

Arne solved this problem in a weirdly beautiful way. He extended the barrel far to the rear, all the way over the magazine well, and had the cartridges feed out of the magazine rearward. A set of "tongs" on the slide take the round out of the magazine, and a frame-mounted platform lifts it to feeding position.

It worked, perfectly, and the rifled portion of the barrel measured nearly three inches. With some loads, this gave velocities up to 1400 foot-seconds, and energy of around 500 foot-pounds.

For the next few years, Arne produced the pistol as the Boberg XR9-S. Then, about a year ago, Bond Arms acquired the design, and it became the Bond Bullpup.

Before we get into the operational features of the Bond Bullpup, let's backtrack for a moment to cover two important points – historical, and mechanical. Around 120 years ago, in England, we see the only other example of a rearward-feeding magazine. It was the Mars pistol, designed by Hugh W. Gabbett-Fairfax. Its delicate feed system involved a separate breech-block, and major parts were exposed at the rear during recoil.

None of this applies to the Bond Bullpup. The feed system is all internal, and strong. There is one caution, about ammo: do not use reloads, el cheapo brands, or any aluminum-cased stuff. With these, the rearward pull-out from the magazine will sometimes pull the case off the bullet! With quality ammunition, never a problem.

The well-written manual, full of the usual lawyer-ly warnings, has a lengthy list of approved ammo on page 6. For ordinary range use, Bond recommends the Winchester "White Box" 115-grain FMJ load. For serious business, one of the

nine listed is the Hornady Critical Defense. In test-firing, both worked fine. More on this later.

On the gun shown here, the finish on the high-tech alloy frame is matte black. The stainless-steel slide is natural matte. The grip panels, meeting at the rear, are laminated wood. The front-strap of the grip-frame has light cross-grooving. At upper rear, there is a deep in-curve that sets the pistol firmly in the hand.

Instead of Browning's falling-barrel, the locking system is turning-barrel. Back around 1905, Karel Krnka in Austria and Elbert Searle in America discovered its advantages. It keeps the bore closer to the hand, and adjusts its unlocking speed to the load used. Also, some say the non-tilting barrel affects the felt-recoil.

The trigger system is Double-Action-Only, and the pull is ultra-smooth – average, 8 pounds. There is no manual safety as, with the long DAO trigger pull, there's no need for one. Inside, the firing pin is blocked at all times, and is cleared only in the last bit of trigger pull. On top of the slide, just above the extractor, a small opening lets you see a chambered round.

The sights are excellent, square-picture, three white dots. Both front and rear are horizontally adjustable in their dovetails, by loosening the hex-screws. If you're moving the rear sight, be careful to keep it in its dovetail, because its under-side retains the spring and plunger of the automatic firing-pin-block.

Old-timers may be startled by the magazines, not only by their rearward-feeding, but also by the lack of any follower-piece at the top. The rounds directly contact the perfectly formed spring, with no problems. Design-wise, this

allows a capacity of seven rounds; with one-up giving you eight shots.

After the last round, there is no slide hold-open. With this magazine design, it would have been difficult. I see a way to do it, but it would require up to six more parts, and extensive extra machine work. It's better left off. For a quick brush-out after shooting, you can lock the slide open by setting the takedown-lever at halfway point.

There are other very welcome omissions in the design. No magazine-disconnect safety, so you can still fire a chambered round if the mag is lost or damaged. No dumb "hook" on the front of the nicely-rounded trigger guard. And, most importantly, no silly "flipper" safety in the wide, smooth-faced trigger.

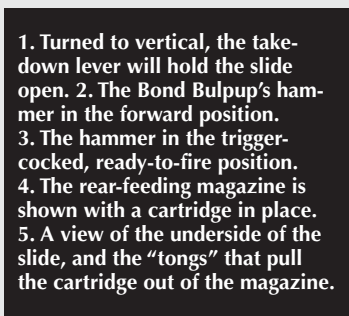

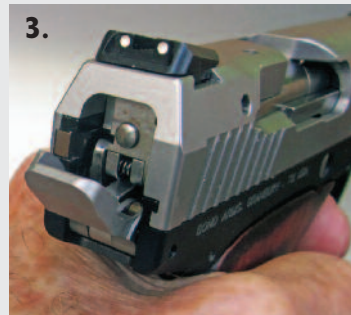

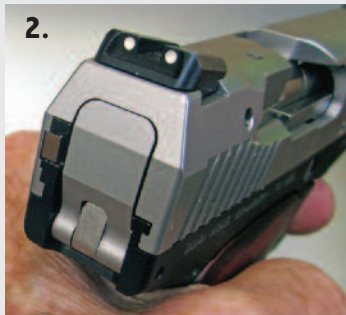

For deep-concealment carrying, the dimensional numbers are excellent. Overall length is 5 inches. Height, 4.06 inches, and width, 1 inch. Barrel length, 3.18 inches. Weight, 18.7 ounces. As noted earlier, magazine capacity is 7 rounds. It's a true sub-compact, but superior ergonomics make it more pleasant to shoot than most of the others.

It's not a target pistol, so I didn't try any rested, long-range stuff. Distances were 7 yards and 15 yards, standing, two-hand hold. Several well-centered groups averaged between 4 and 5 inches, more than adequate for personal defense. Using the recommended loads, functioning was flawless.

Later on, there will be other finishes offered. An all-black version, for example. Considering the features and high quality, the MSRP is reasonable at \$977.

\$49.95

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550s

AUTO PRIME SYSTEM

Includes:

Primer Housing /Shield
Primer Slides, Large/Small
Pickup Tubes, Large/Small
Pickup Tube Tips, Large/Small

One-Inch Bench Wrench	006-10842	7.95
Square-Deal-Only Wrench	006-19970	8.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	006-97126	\$149.95
----------------------	------------------	-----------------

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	006-16306	\$41.95
--	------------------	----------------

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Dillon's Case Preparation Equipment

CV-2001 O06-20493 \$189.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

CV-750 O06-19455 \$145.95

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To

CM-2000 Case/Media Separator O06-20675 \$75.95

CM-500 Case/Media Separator O06-21045 \$47.95

accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers: Case Cleaners are available in 220 volt!

Euro CV-2001 O06-22047 \$214.95
Euro CV-750 O06-19473 \$170.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners now have a Five-Year Warranty on the electric motor.

Rapid Polish

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run.

Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **O06-13804 \$8.95**
Case (20 pc.) **O06-20255 135.95**

Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

Super 1050/RL 1050 Short Trim Die Toolhead

O06-62219
\$224.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. *(NOTE: the Blue 1050 toolhead stand – Part Number O06-62200, \$49.95 – is not included.)*

We're

SUPER VEL[®]
Ammunition

Dillon's New Rapid Trim 1500 Case Trimmer ²³

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **O06-62164** is **\$330.95**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **O06-13141**, are **\$19.95** each. Upper lock rings, **O06-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

by Mitch Rosen!

When we lost our supplier for Dillon Leather, we considered abandoning the gunleather business. Fortunately, we were able to team up with Mitch Rosen Extraordinary Gunleather to continue to offer a best-quality, made-in-the-USA line of belts and holsters. We know you'll like these products – we're happy to have our name on them.

Dillon's Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access, has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle

Mernickle's "Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original. This belt is a favorite with law enforcement, military personnel, fire-

fighters, paramedics, etc. *Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.*

ANNOUNCING: Mr. Bulletfeeder® by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

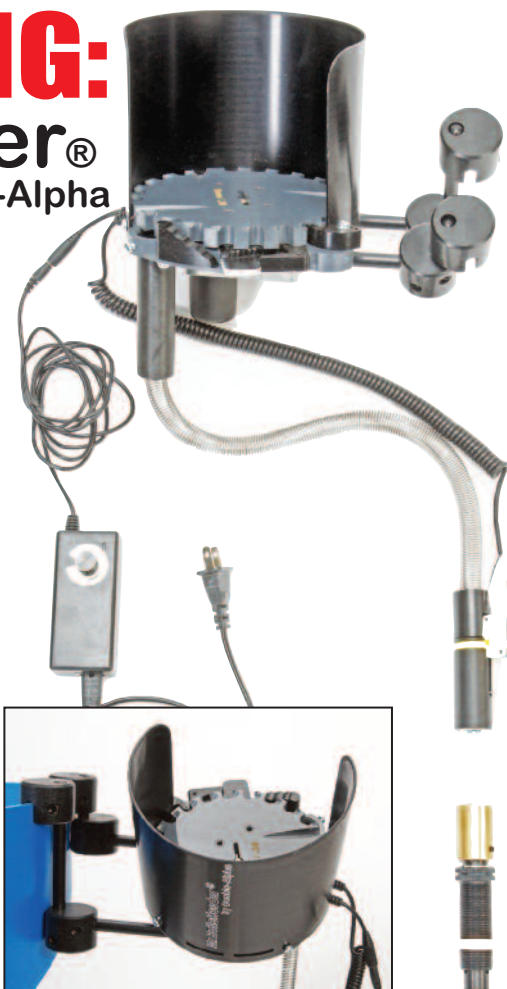

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collar to be mounted onto the case-feeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Mr. Bulletfeeder (Comes Set Up in One Caliber)

Mr. Bulletfeeder® Replacement Parts & Spares

Having separate Bullet Dropper Dies allows you to quickly swap toolheads of the same caliber sizes without having to remove and readjust the bullet dropper die.

The Output Tube Assembly is what connects the Mr. Bulletfeeder by DAA's collar to the dropper. It feeds the bullets into the dropper, keeping them aligned and feeding smoothly. The Small Output Tube Assembly is required for the rifle calibers (both .223 and .308) as well as when loading very short, light 9mm bullets, such as many of the 90-grain bullets available. The Large Output Tube Assembly is required when loading 9mm (over 115-grain bullets), .40, or 45.

Use a spacer? This four-pack of Nose Guide Spacers is identical to what comes with the Mr. Bulletfeeder. These are used to adjust the height of bullets, so they don't spill out or flip upside-down.

Dillon's Pistol Die Sets

Size Die

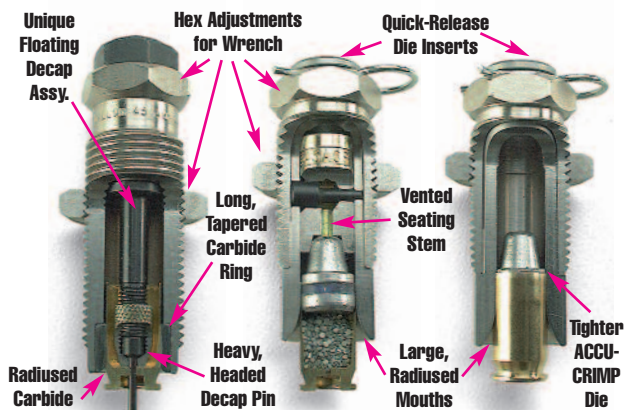

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the tool-head and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a head-space case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Etymotic GunSport

By Peter Caroline

Q: What do you call an old shooter?

**A: Anything you want;
he probably can't hear you.**

Like so many shooters of a certain age, I belong to that elite fraternity known as Men Who Say "WHAT?" I started shooting .22 rifles, without ear protection, at age 13 at summer camp. I continued that practice through high school and college. When I began Basic Training at beautiful Fort Dix, NJ, I learned how to shoot the M1 Garand rifle, also without hearing protection. Assigned to Ft. Belvoir, VA, I was drafted into the post pistol team. In the winter months, we shot .22 LR Colt Woodsmans and High Standards at an indoor range, with no ear protection. In the spring, we moved outdoors to fire 1911A1s. It wasn't until we were firing 1911s indoors during inter-post competition that it was suggested we purchase ear protection... which at that time were earplug devices called Lee Sonic Ear Valves.

Needless to say, by the time I was in my mid-twenties, my hearing was heading downhill. Shooting both indoors and outdoors at various gun clubs, I used foam rubber earplugs, protective earmuffs or a combination of both. This helped but also made range officer commands nearly inaudible. As soon as electronic hearing protectors

became available, I got them. They work very well indeed, but are no real fun in hot weather. Also, as I discovered while shooting Sporting Clays, they can get dislodged while getting into a proper cheek weld in a hurry.

Several years ago, in order to preserve domestic tranquility, I finally gave in and invested in a pair of hearing aids. These gadgets cost a bit more than a super-custom 1911, but they do really help, especially if you're at all interested in hearing what other people have to say. Their only real deficit is, when I go to the range, I have to remove my hearing aids and put on some means of hearing protection.

Recently, I was introduced to a new product called Etymotic GunSport-PRO Electronic Earplugs. These are, obviously, earplugs that enable you to hear normally until the sound exceeds safe levels...like, a .30-06 discharging six inches from your ear. The device has a Noise Reduction Rating of 25 decibels. When the sound returns to safe levels, natural hearing is resumed. One neat feature is, the earplugs have an Enhancement+Blast Protection mode, which amplifies soft conversation or forest sounds, but instantly protects your hearing when noise exceeds a safe level. The earplugs come with a variety of eartips, both conventional and foam, to

PRO Electronic Earplugs

fit ear canal diameters of 6-13mm. Batteries will last for about 9 days of continuous operation...or two weeks if you open the battery door after every use. The earplugs use #10 hearing aid batteries, which cost \$8.49 at Costco for a pack of 48.

Opening the box initially, I found a generous assortment of accessories. In addition to the earplugs, there is a wide variety of eartips, both conventional flanged type and foam, and all are reusable. The foam ones offer the most effective seal and can be compressed by rolling them in your fingers before inserting. There is also a flexible neck cord, which helps protect against loss, and a small (2-1/2" x 2-1/2") protective case. Also included are a supply of tiny filters that keep earwax and other detritus from entering the device, a cleaning tool with brush, and a handy little metal tool for removing and replacing said filters. A package of eight #10 batteries is also included. The instruction sheet is well illustrated and very easy to follow, and is printed in English and six other languages.

I put the earplugs to their initial test with two of the noisiest guns I had on hand...a new Ruger

SR1911 10mm pistol and an older Ruger No. 1 .30-06 w/custom-fitted compensator. The latter was particularly appropriate because its centenarian cartridge was the one that destroyed my hearing in the first place. During a nearly hour-long shooting session, in both LO and Enhanced modes, the GunSport-PRO earplugs allowed...and in my case, enhanced...normal conversation, and very effectively shut off any harmful blasts. The earplugs were quite comfortable and unobtrusive, far more so than my usual electronic earmuffs.

Overall, I found the Etymotic GunSport-PRO Electronic Earplugs to be an effective, comfortable and vital accessory for hearing protection and effective communication in any shooting environment. They retail at \$299, about 5 percent of the price of the conventional hearing aids you'll need if you shoot without hearing protection. **Blue Press** readers can get 15 percent off that price by using the code EHP10TP at etymotic.com.

CCW Tactical Shotshell Strippers⁴¹

California Competition Works' Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

Tandem Tactical Stripper **O06-00303** \$55.00

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device (C. & D.) that will accommodate up to a 2-1/4" duty belt.

- A. Six-Shell Tactical Stripper **O06-18606** \$23.95
- B. Four-Shell Tactical Stripper **O06-18605** 22.95
- C. Three-Shell Aluminum Stripper* **O06-19475** 34.95
- D. Six-Shell Covered Tactical Stripper **O06-19225** 33.95

*Three-Shell Aluminum Stripper accommodates 2-3/4" shells only.

The new Super Vel. Hotter. Faster. Better.

The original Super Vel Cartridge Company forever changed "police ammunition" with a new style of bullet, the jacketed hollow point. Now, 40 years later, Super Vel is back!

Advised velocity figures from Super Vel's website are as follows: 9mm 90 Gr. **1,473** fps (GLOCK 43) to **1,632** fps (GLOCK 17L); .38 Special 90 Gr. **1,318** fps (S&W Model 642) to **1,652** fps (S&W Model 27); and .45 ACP 185 Gr. **1,085** fps (S&W M&P) to **1,127** fps (Springfield 1911).

CLASSIC FIREARMS: The Smith & Wesson

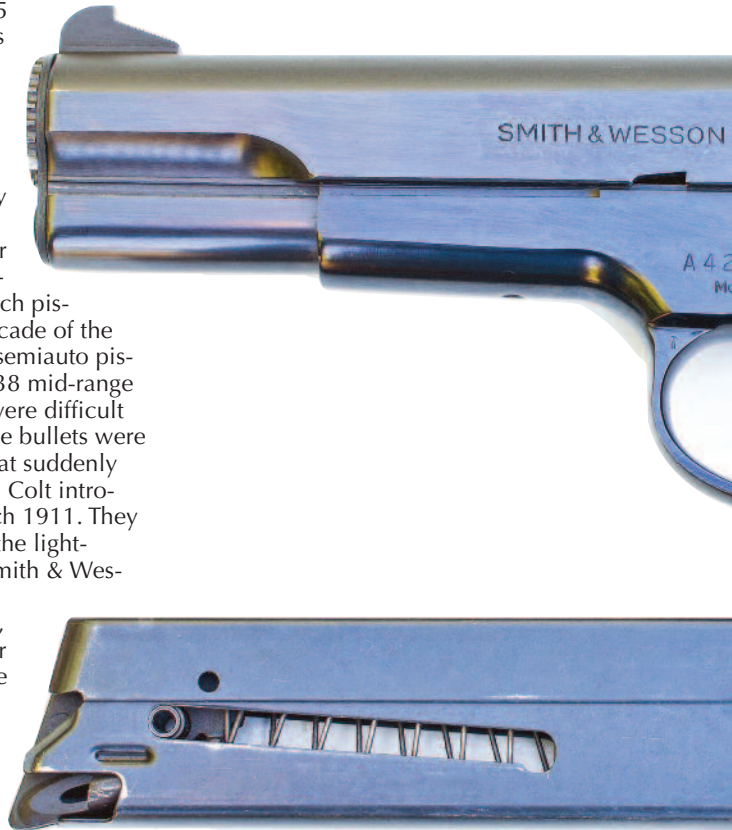

By John Marshall

In the 1960s, THE pistol sport was “Bullseye” competition. The official course was .22, center fire, and .45 handguns being shot in slow, timed and rapid fire one-handed at 25 and 50 yards. Since the maximum score was 2700 points, the event was often called “2700 competition.” High Standard pistols ruled the .22 events, while center fire was usually shot with .38 Special Colt or Smith & Wesson revolvers. The .45 course was dominated by Colt 1911s in both accurized and factory target versions. Shooting revolvers in the center fire phase was awkward. The shooter’s grip had to be changed to cock those guns for each shot. That consumed precious time, particularly in the rapid-fire stage. A lot of competitors therefore chose to shoot their semiauto .45s in the center fire phases, accepting the heavier recoil of such pistols to gain rapidity of fire. As the decade of the 1960s began, there were no factory semiauto pistols that could handle the standard .38 mid-range wadcutter cartridges. These rounds were difficult to feed through autoloaders, since the bullets were flat, seated fully in rimmed cases. That suddenly changed in December of 1960 when Colt introduced their Gold Cup National Match 1911. They had succeeded in chambering it for the light-recoiling .38 Special target round. Smith & Wesson was not going to let that feat go unchallenged. In September of 1961, they introduced the Model 52 Master target pistol, specifically set up to fire the .38 Special wadcutter cartridge with superb accuracy and reliability. It quickly became the hottest item in center fire Bullseye competition, and it is still a legend.

Smith & Wesson had some experience with .38 autoloaders, because in 1960, the Army’s Marksmanship Training Unit had asked them to craft some pistols chambered for the .38 AMU cartridge. This was nothing more than the .38 Special mid-range wadcutter round in semi-rimless form for better feeding through an autoloader. S&W provided them some prototype pistols based on the Model 39, but the Army decided not to pursue this path further. The steel-framed AMU prototypes were designated as Models 39-1, but not so marked. This designation was later changed to Model 52, but no commercial guns were released stamped as such at the time. When the commercial .38 Special Model 52 was introduced, the AMU pistols became Models 52-A and were appropriately stamped with that designation before releasing

them to the public. With less than 100 produced, these have become valuable collector items.

Following the Colt .38 Special Gold Cup National Match introduction, S&W went into high gear to develop their own version. The objectives were unequalled accuracy, perfect reliability, great handling, a competition grade trigger and high quality target sights. The project was assigned to Joe Foster, who worked from the basic Model 39

double-action pattern. The new 52 varied in having a steel frame, and the double-action feature was locked out with a setscrew, making it basically a single-action design. Foster related that his primary challenge was making the pistol work reliably with a rimmed cartridge where the bullet was flat and seated flush with the mouth of the case. He met the challenge admirably, and his magazine design fed five rounds (the standard Bullseye competition capacity) perfectly.

The next challenge was ensuring that the front of the barrel would be returned to the same position at lockup with no wobble, shot after shot, for best accuracy. This objective was achieved by giving a portion of the barrel’s muzzle a spheroid shape,

Smith & Wesson Model 52 "Master" Target Pistol

allowing the barrel to tilt down in unlocking and tilt up in locking with absolutely no play. In fact, the standard of the company for the Model 52 was 10 consecutive shots into a 2" circle at 50 yards, but they conservatively advertised that all shots would go into a 3.39" circle (diameter of the 50 yard target's x-ring) at 50 yards from a machine rest. Any pistol not meeting the 2" requirement was returned before shipping for correction.

The rear sight was micrometer adjustable for both windage and elevation, and well marked for direction of the change of impact. Adjustments could be made with a coin. Each click was equal to a change of 3/4" in elevation and 1/2" in windage at 50 yards. The front sight was 1/8" wide with a Patridge configuration. This arrangement was perfect, giving a distinct and easily adjustable sight picture.

The pistol was designed for a special extra weight that could be affixed at the front of the frame. These weights are valuable collector items today. Each gun was shipped with two magazines, a special barrel bushing wrench, a screwdriver,

instruction sheet and cleaning kit in a fitted cardboard box.

The Model 52 came standard with a 5-inch barrel, and velocity for most mid-range ammo hovered around 750 feet per second. It was very soft shooting, with little recoil. The gun's safety simply rotated a metal block in front of the firing pin. This allowed for extensive dry fire practice with no harm to the pistol. A magazine safety was fitted, which prevented firing the pistol when the magazine was removed. An adjustable trigger stop was utilized to control trigger overtravel.

Initial manufacture of the Model 52 was slow, with only 90 pistols produced in 1961. Production increased to 1,078 pistols in 1962. Shooters complained about the locked-out double-action trigger design. Accordingly, on May 13, 1963, the Model 52-1 was put into production with a new trigger design that was single action only. It was a great improvement, and the trigger pull became noticeably crisp and light. The original Model 52's total production was 3,500 pistols. In 1971, the extractor was improved to a coil-spring type that addressed the occasional breakage of the original long, wide and flat single-piece spring steel design. This change generated a new model number, the 52-2, which was produced until 1993. With increased production costs and older machinery wearing out, coupled with the fading of Bullseye shooting as a sport, the end of the Model 52 became inevitable. The last Model 52-2 was serial number TZW9149, and it was retired to the S&W gun vault as a museum piece.

Today, collectors seek the improved Model 52-2, particularly if a gun bears an early A-prefix serial number like the one illustrated. It was shipped in October 1978 (when it was priced at \$320 retail). These had the finest high gloss finish. Later guns shot just as well, but esthetically were not quite up to the previous standards of bluing. One Model 52 was evidently factory made with a 4" barrel, and 5 were factory chambered in 9mm with 4" barrels, probably using Model 39 slides. No 52s were factory produced with a nickel finish. The Model 52 was a legend in the glory days of Bullseye competition, and it's never been equaled for center fire accuracy. Good existing examples are being snapped up when found, and prices have been escalating almost exponentially. It was one of the finest products ever made at Smith & Wesson. It was also a very handsome firearm, and most certainly a classic.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

O06-21894 \$44.95

Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

O06-19972 \$39.95

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mms.

Made in the USA and comes with a lifetime warranty.

By Oleg Volk

The Czech-designed vz58 is a short-stroke piston rifle that feeds from detachable box magazine...at least that's what it is in most of the world. In the occupied states of New York and California, a special Liberty model is available instead, in the finest 1984 sense of the word. The vz58 Liberty follows the magazine designs of the FN49 and the SKS, with a fixed 10-round magazine fed from stripper clips. From the 1930s to the 1950s, quite a few rifles – SVT40, G43, AG42 and Hakim – were also designed with detachable magazines but loaded primarily from stripper clips. At the time, stripper clips were both cheaper and more weight efficient than box magazines. In the case of the CzechPoint vz58 Liberty rifle, the compelling “advantage” of the stripper clip is in the elimination of the detachable magazine by oppressive state laws.

The vz58 originated as a successor to the vz52, a 10-shot rifle that features a detachable 10-rounder but was usually topped off from stripper clips. With the adoption of vz52/57, a 7.62x39 variant, Czechoslovakia also adopted COMBLOC-compatible SKS stripper clips. Like the earlier rifle, the vz58 retained stripper clip guides in the receiver cover. For years, they seemed to be obsolete vestiges of its development history. More recently, anti-gun legislators made them relevant again.

Loading from clips is pretty simple: insert either end of the loaded clip into the guide cutout and

stabilize the clip with your fingers while pushing down with the thumb close to the clip spine. Once all 10 cartridges are staggered inside the fixed magazine, pull the steel clip out to retain or discard it, then pull the bolt handle slightly back and release to chamber the first round. Once the magazine empties, the bolt locks back and the rifle is ready for another clip of 10. To speed up the loading process, pull slightly back on the empty clip and then pull the clip upwards to remove from the bolt carrier slot. Pulling back on the clip pushes the bolt carrier back far enough to

disengage the bolt catch, so the bolt goes into battery without a separate motion to operate the charging handle.

This works pretty reliably, and even allows a very low profile in prone. The main disadvantage is that swapping to a full magazine when half-empty isn't possible, and topping off with loose cartridges is a little awkward. For that, the bolt has to be locked back manually, with the chambered cartridge

ejecting. Actual sustained rate of fire with stripper clips isn't that much slower than with a 30-round magazine, being more limited by the speed of aiming and by the heat endurance of the rifle.

Unlike the original vz58, which was built very light with 15-inch light barrel, the Liberty and Elite versions share 16-inch medium chrome-lined barrels of superior quality. Absence of the detachable magazine allows the Liberty to legally have a telescoping stock, a pistol grip and a Phantom flash hider even in the restrictive jurisdictions. The Liber-

The CzechPoint vz58 Liberty rifle features a fixed magazine that loads from 10-shot SKS stripper clips. Detachable-magazine vz58s are available from CzechPoint, Inc. as well.

CzechPoint vz58 Liberty

ty rifle uses slightly modified MagPul Zhukov furniture in either tan or black. Thanks to the higher-quality barrel manufactured by Lothar Walther in Germany and a properly ventilated forend with a heat shield, these newer vz58 variants can run over 100 rounds in a row, compared to about 60 of the military original. Accuracy is also greatly improved, with the barrel supporting 1.5MOA results compared to 4-5MOA typical of the surplus Czech barrels. The new barrel is also longer than 16 inches, so it can be threaded for interchangeable muzzle devices instead of requiring a pinned one.

Practical accuracy of the original vz58 was limited as much by the sights as by the barrel. While the rear sight leaf was marked from 100 to 800 meters, shooting it that far was an exercise in unfounded optimism. The new rear sight has a "U" (universal) setting, indicating 0-300 meter point blank range. In low light, the vz58 benefits greatly from the "AK" marked fiber optic front sight post made by HiViz. The main contribution to accuracy is the side optic rail, supporting both a high see-through mount and a more useful low mount for Picatinny-compatible optics. A red dot permits the rifle to achieve about 2MOA, and a low-magnification scope extends aimed range further yet. The optic options are limited by the short rail length and the top ejection of the empties, but something like a mini ACOG or a Leupold 1.5-4x20 fits perfectly and greatly improves practical accuracy. Both mechanical accuracy and sighting

options are far superior to what an SKS can deliver. Obviously, feeding it good ammunition, either factory or properly crafted handloads, is essential. My friend David Esche, a great fan of the vz58, discovered that the rifle can safely use hard-cast bullets without shaving material into the gas port.

Felt recoil is negligible, far less than with the SKS rifle, despite being 0.7 pound lighter than the Soviet design. A short-stroke piston acts on a bolt carrier, which actuates a locking block between it and the bolt, very similar to Beretta M9 design. The lugs of the locking block engage with the rails

machined inside the all-steel receiver. A linear striker sleeve passes through the bolt carrier, in turn operating the firing pin. The whole mechanism comes apart simply and easily for cleaning, with just one pin holding all removable parts and captured spring assemblies.

For people stuck on the Left Coast or unable, for some reason, to escape from New York State, the vz58 Liberty may be the most capable 7.62x39 rifle that's

legally available. It's also fun at the range, being ergonomically designed and adjustable to different shooters. Should an owner of such a rifle move back to America, 10 minutes with a punch and replacement parts can restore the gun to the more-efficient removable magazine configuration.

RCBS Trim Pro-2™ Case Trimmer O06-43231 \$139.95

The RCBS Trim Pro-2 manual case trimmer now features a spring-loaded "universal" shell holder that will accommodate case head diameters from .250" to .625". Comes with pilot calibers: .22, .24, .25, .27, .28, .30, .35, .44 and .45.

Dillon's Bench Wrench Fits 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

1" Dillon Die Lock Ring	O06-14067	\$1.35
5-Pack of Die Lock Rings	O06-10669	\$4.15
1" Dillon Bench Wrench	O06-10842	7.95
(Buy two or more 1" Bench Wrenches for \$7.10 each)

Comtech's STINGER

THE STINGER: Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes unnoticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger today!

Elzetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

SARSILMAZ SR 38 REVOLVER

By Mark Pixler

In the February 1997 *Blue Press* we ran point/counterpoint articles by Duane Thomas and Peter Caroline titled "Is the Revolver Obsolete?" and "The Revolver Rules!" More recently I was having a conversation with Cameron Benz, another of my contributors, who opined that revolvers aren't necessarily obsolete, but what they HAVE become is "too damned expensive!"

There was a time, during the rising tide of "Wundernine" automatics, that revolvers were both plentiful and cheap. As police departments and security agencies abandoned their 19th Century-era weaponry in favor of the new, high-tech, high-capacity wonders, the cast-offs were selling at glutted-market prices. That was about the time I had decided I was a "revolver guy." It might also have come about because I'm a perennial cheap-skate, but that's yet-another story.

These days, revolver enthusiasts have a comparatively limited field from which to choose, and prices have risen considerably. So, for those of us who still like to shoot revolvers in competition, or those who would like to try it without breaking the bank, what's a good alternative?

I'd like to humbly suggest the Sarsilmaz SR 38 .357 Magnum/.38 Special revolver. Manufactured in Turkey and imported by TR Imports Inc. of Fort Worth, Texas, the SR 38's suggested retail price is from \$481 to \$558 – MUCH less than the MSRP of competing revolvers. It fits holsters available for Smith & Wesson L-Frame models and we found that the W.C. Wolff Co. spring kits #15073 (standard) and #15072 (reduced power) fit like they were made for it.

Since it fits holsters for L-Frame revolvers, one would naturally assume that speedloaders made for L-Frames would work for the SR 38 as well. Not so fast. I tried my Safariland L-Frame Comp IIIs and immediately noticed a clearance problem with the thumb latch. *No problem*, I thought, *I'll just replace the thumb latch with a Hogue Competition model*. Still a "no-go" situation. Then I removed the thumb latch altogether and found that even without the thumb latch clearance issue, the L-Frame Comp III itself seemed a bit tight. I then tried a K-Frame Comp III, which actually seemed to work better.

Ultimately, I'd recommend that anyone who buys an SR 38 do some experimentation with various brands of speedloaders – HKS, Safariland, 5 Star Firearms, Speed Beez, etc. – and see which ones work best. There ought to be plenty of used speedloaders available at gun shows or on e-Bay, and it would be worthwhile doing some testing. I plan to start with a file, the factory SR 38 thumb latch and Safariland K-Frame Comp III speedloaders.

Although having to fiddle a bit with speedloaders is annoying, I'm willing to forgive that because the Sarsilmaz SR 38 has no "safety" locking mechanism. One of my colleagues here at Dillon Precision has experienced failure of such a locking mechanism during a match when it inadvertently engaged. Damned inconvenient during a competition, but – fortunately – the USPSA targets weren't shooting back! By the way, I'm pretty sure my colleague's CARRY gun doesn't have a "safety" locking mechanism.

Continued on Page 69

At the top of this page is a photo of the Sarsilmaz SR 38's excellent adjustable rear sight. Below that are views of the front sight, showing the unusual longitudinal dovetail and how the blade is pinned into it. At right is the SR 38 revolver with the sideplate removed, revealing the mechanism. By the way, the W.C. Wolff Co. reduced power spring kit has already been installed in this photo.

Note: from the looks of the internals, it appears that this is a stainless-steel revolver with a black-oxide finish.

"Small rifle" cases fit .222, .223 to 7.62 x 39 length; 20 round "medium rifle" cases fit 7.62 x 39, .22-250 to .30-06 length; 50 round "medium rifle" cases fit .22-250, .308 to .30-30 length; and "large rifle" cases fit .30-06, 8 x 57 length to all belted cartridges.

Extra Loading Data Labels, O06-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL650 cartridge bins are 6-3/4" long x 3-

7/16" wide x 2-13/16" deep.

- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Description	Stock #	Each	6 ea.	12 ea.
"Square Deal" Bin	O06-13756	\$2.95	\$15.30	\$24.84

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Swab-its – A Swab for Every Job! ⁶⁵

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that “whisky-tango-foxtrot” look on his face. “Hi,” I said (*thinking fast*), “I’m trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!” The **Bore-tips Swabs** REALLY DO work. What you can’t see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

E-Z Brite Wonder Cloth

On gun dealers shelves since 1976, this product is still a must for keeping stainless steel and nickel-finished revolvers looking like new. Demand the original lead and carbon wipe!

- E-Z Brite Cloth **006-18613 \$6.99**

Oregon Trail Defense Firearms Stippling Kit – If your firearms are tools, and not pretty things to sit in a safe, then you may want to consider investing in a stipple kit and getting some grip on your guns! Stippling provides you with as much or as little grip as YOU need on YOUR gun. This Custom kit features a USA Made Wall Lenk 25-Watt Stippling Gun. OTD Stippling Kit **006-12370 \$64.99**

M-PRO7

M-PRO7™ Gun Cleaner is odorless, non-toxic and biodegradable. "Safely cleans rifles, handguns, shotguns..., black powder, corrosive priming deposits and much more."

- 4 oz. **006-10139 \$11.95**
- 8 oz. **006-10138 18.95**
- 32 oz. **006-11298 40.95**

M-PRO7™ Copper Remover works up to four times faster than ammonia-based cleaners and is odor free.

- 4 oz. **006-19370 \$11.95**

FrogLube

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

- 4 Oz. Paste **006-15443 \$10.99**
- 4 Oz. Liquid **006-15444 17.59**

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

- Slide-Glide Standard **006-15571 \$7.95**
- Slide-Glide Lite **006-15572 7.95**

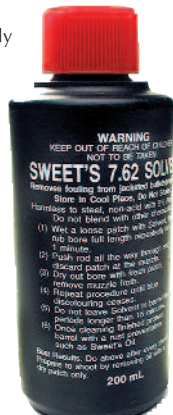

Microlon UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

- 006-75125 \$9.95**

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

- 006-13128 \$12.95**

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

The SR 38 I picked to review features a matte black finish that reminds me of Parkerizing. Trigger action benefited greatly from the addition of the W.C. Wolff Co. reduced-power spring kit, but I've shot "brand name" revolvers with heavier trigger pulls than the SR 38's was from the factory.

Other than the spring kit, all I've done to the SR 38 so far is a rather hastily applied coat of Liquid Paper® correction fluid to the front sight. Speaking of which, the front sight is tall, thin and pinned into a dovetail. It complements the adjustable rear sight perfectly, given the rear notch is wide and allows for plenty of light on either side – a blessing for my crappy eyesight.

The rear sight looks and functions exactly like an aftermarket revolver sight we used to offer in *The Blue Press* that sold for about a hundred bucks. Kind of makes the SR 38's \$481 MSRP seem like even MORE of a bargain.

So, does this mean I'm going to sell all the revolvers I acquired during the rise of the Wundernines in favor of the SR 38? Nope, ain't gonna happen. Am I going to add the Sarsilmaz SR 38 revolver to that collection? Oh YEAH.

Scout Scope Mounts for AK, SKS Rifles

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle **O06-25374 \$79.99**
 Scout Scope Mount for SKS Rifle **O06-25373 78.99**

A COOL HOT LOAD FROM THE NEW SUPER VEL

By Duane Thomas

Most serious shooters are at least casually familiar with the story of pioneering ammunition company, Super Vel. There's no hard evidence on who exactly first invented the jacketed hollow-point, since both Lee Jurras and Jim Harvey were simultaneously experimenting with taking .358" caliber rifle bullets, which are of course jacketed with a lead core, cutting off the bullet tips, giving the then-exposed lead various cavities and hollowpoints, then shooting them in handguns with a .357" bore diameter.

There were also a few other people working along similar lines at the time. But there can be no doubt it was Jurras who popularized the concept through the company he started in 1965. He did this by dropping bullet mass down to weights previously considered light for a caliber by hollow-pointing them, then driving those light slugs to high velocities. So popular, so groundbreaking, was Jurras' approach, so threatening to major ammunition companies, they banded together to cut off his supply of brass.

This was before the days of companies like Starline, willing to sell top quality cartridge casings to anyone with the money. Super Vel closed its doors in 1975. In its 10 years of existence, Super Vel forever changed the definition of what makes good self-defense ammunition.

Recently Super Vel has risen from the ashes, at its helm a man known to many of us as the former editor of *American Handgunner* magazine, Cameron Hopkins. Having started his own compa-

ny selling remanufactured ammo, Hopkins was intrigued by the idea of resurrecting Super Vel for a modern audience. (With all-new brass, obviously.) Even though the rights to the name had long since expired, feeling it would be wrong to use "Super Vel" without Lee Jurras' permission, Hopkins broached the idea to Jurras, and was told, "I have no further use for that name. You may have it, with my blessing."

Obviously it would be impossible to replicate Super Vel's trailblazing ways today. There are simply way too many jacketed hollow-point self-defense loads out there, and have been for decades; that genie is well and truly out of the bottle. Realizing this, Hopkins has instead geared his company's output to an under-served segment of the ammunition game: loads designed specifically to give ultra-high velocities from the short barrels found on compact and sub-compact handguns intended especially for concealed carry. Thus far the company has only a handful of loads, with more upcoming, but the one that

instantly leapt out at me as most interesting was their 90-grain JHP +P in 9mm. Super Vel's website lists 1,473 feet per second for that load out of a GLOCK 43. Well, you know I had to test THAT.

I reposed to the range with the Super Vel 90-grain JHP +P and five different autopistols in a variety of barrels lengths. Though this load was conceptualized for short-barreled autos, still I felt people might be curious how it performed from longer barrels, as well. I know I was. Thus my test

The short overall length and gaping hollowpoint of the Super Vel 90-grain JHP +P might seem it would lead to feeding failures, but, at least in the five guns with which Thomas tested it, that proved to not be the case.

Though Cameron Hopkins could have designed a new-look box for his ammunition, he chose instead to recreate the classic red-and-yellow original Super Vel box.

guns included (from longest to shortest, factory stated barrel lengths) the GLOCK 34 (5.32" or 5.31", depending on which GLOCK catalog you read), Wilson ESP Classic (5"), Wilson EDC X9 (4"), GLOCK 43 (3.39"), and finally Kimber's Ultra CDP II (3"). I ran 20 rounds apiece through each gun over my CED Millennium chronograph. Average velocities, as well as USPSA/IPSC/IDPA power factors (this latter measurement is important for reasons which will soon be obvious), were as follows:

GLOCK 34: 1,545 fps, 139.1 pf
 Wilson ESP Classic: 1,539 fps, 138.5 pf
 Wilson EDC X9: 1,468 fps, 132.1 pf
 GLOCK 43: 1,434 fps, 129.0 pf
 Kimber Ultra CDP II: 1,436 fps, 129.2 pf

Okay, we all know that differences in temperature, altitude, even the individual gun, can affect velocities. While Super Vel's stated velocity for their 90-grain JHP +P from a GLOCK 43 is a bit more than what I got, still it's close. Note how little velocity difference there is between the 3" Kimber Ultra CDP II and 4" Wilson EDC X9, an

indicator this load achieves the vast majority of its velocity in the first few inches of barrel length. This is exactly what you want in a load for short-barreled autos.

The amazing thing is, even at those velocities, due to the light bullet weight, recoil is mild. If you run this load through the power factor equation, it comes out right around the same as (maybe slightly more than) factory standard pressure 9mm hardball, which tends to run in the mid-120s to mid-130s depending on barrel length. Thus it's no great shock the recoil level feels very similar to 9mm ball. It's very slightly snappier, and, as you would expect, it's loud, but for such a stompin' load the level of backbite is amazingly small. This is a FUN load to shoot.

My supply of Super Vel 90-grain JHP +P happened to show up right around the same time as my sample Wilson EDC X9. Because I knew a lot of people who were curious about the EDC X9, and I figured they might also be curious about the Super Vel 90-grain load, I took this gun with me to two different pistol matches and let anyone who

Target EDC X9 – Best accuracy from the bench at 50 feet was 1.3" with the Wilson EDC X9.

wanted to, fire the EDC X9 with Super Vel. I literally had people lined up waiting their turn to fire the Wilson/Super Vel combo. No one failed to be impressed by the gun, and the ammo. The common refrain, aside from what a nice gun was the EDC X9, was just how blown away people were by the moderate recoil impulse, especially after I told them how fast the bullets were going. While walking back to the clubhouse afterward, at one match, I heard one of the guys I'd let shoot the Wilson/Super Vel enthusing to a friend of his, who hadn't gotten to, "One thousand four hundred and sixty-eight feet per second...and it feels like you're firing 9mm hardball!"

Accuracy was tested with 5-shot groups from the bench at 50 feet, the maximum distance possible on the indoor range where I do most of my shooting. Groupability was more than decent, with Best In Show going to the Wilson EDC X9 at 1.3". The Kimber Ultra CDP II barely missed 1st place, putting four rounds into a tight 0.8" with, alas, a single flier opening things up to a still acceptable 2" even. Unlike some loads with non-standard ballistics, the Super Vel 90-grain JHP +P can keep its bullet holes together. You'd think a bullet this light and fast would hit to a radically different elevation than standard loads, but with almost every gun fired (more about which shortly), elevation was either spot-on or close to it, at most 1" high. Strangely enough,

every one of those guns, which had previously been sighted-in for other loads, placed its bullets 1" to 1.5" left of point of aim. This could of course all be easily dealt with if your gun had adjustable sights, and still somewhat easily with fixed sights through drifting the rear sight in its dovetail, and a slightly higher front sight, if you wanted to be really nitpicky about having perfect point of impact/point of aim.

In the interest of excruciating honesty, I must mention the exception to all this was the GLOCK 43, which with its stock sights placed bullets so high above point of aim I was occasionally banging them off the target carrier, and gave absolutely horrible groups. No, I can't tell you how horrible since I threw away those targets as a way of blocking the trauma, even those few on which all five bullets managed to strike the entire 14"x14" sheet of paper. But since the G43 was doing the same thing with every single load I put through it, you can't really blame that on Super Vel. I don't believe I have ever, in 28 years of being a gunwriter, been so unimpressed with a gun for which I had high hopes. I know some people love the GLOCK 43, some people hate it. Put me down in the latter camp.

With its gaping hollow cavity and short overall length, we might expect the Super Vel 90-grainer to be a picky feeder, but I never experienced a single stoppage in 272 rounds fired.

Target Ultra CDP II – The Kimber Ultra CDP II missed being the accuracy champ by one bullet hole. Four rounds went into a tight group well under an inch, with a single flier more than doubling group size. Such is life from the bench.

Granted all my test guns were from quality manufacturers, also granted there may well be some autopistols out there allergic to Super Vel 90-grain JHP +P from a feed reliability standpoint. All I can say is, you couldn't prove it by me. Even the Glock 43 worked with it, if by "worked" you mean "fed reliably."

Several people with whom I've discussed this load made the same comment: "With that velocity, this would be *the* load if you wanted to punch through a windshield." Though I have no empirical test data to back that up, it's certainly a fascinating idea.

This load actually reminds me a lot of Remington's old 88-grain JHP 9mm where Remington took a .380 bullet and stuck it into a 9mm casing. That sucker would crack 1,500 fps out of a Beretta 92D, and I say that as someone who chronoed that ammo, out of that gun. The Remington 88-grain JHP was kind of a cult load among 9mm fans in search of maximum velocity from their hol-lowpoints. The major difference between that load and the Super Vel 90-grainer is that the former has been out of production for years. The Super Vel load is available now.

I have to mention, a bit of an aside but important, I think, just how cool it is that Cameron Hopkins, instead of designing a new look for his ammo boxes, which he easily could have done, has chosen instead to recreate the classic Super

Vel red-and-yellow boxes. For those familiar with the original Super Vel, things like that mean a lot.

Certain specialty ammo companies will cheerfully charge you through the nose for their product. Think in terms of \$31.95 for a 20-round box of 9mm, though you can get it down to \$20 if you're willing to do some online shopping. Do the math, that would be anywhere from \$50 to almost \$80 for a 50-round box, could such things be had. Cameron Hopkins doesn't play that game. The Super Vel 90-grain JHP +P costs \$39.95 per 50-round box. At that price, this is a screaming deal.

Some time after receiving my CARE package from Super Vel, I was told by the fine folks at Dillon Precision they'd decided to begin selling Super Vel through **The Blue Press**. My request to editor Mark Pixler, "Hey, I'd like to do an article on the Super Vel 90-grain JHP +P," was made before I knew my test results would be published in a place through which you can buy the ammo. That was never my intent; this is just how it worked out. Go figure. So the truth is, if you find this load as interesting as I do, you can fill out the form contained in the centerfold of the magazine/catalog you're holding in your hands right now and mail it in, or just call 1-800-223-4570 and have them hook you up. This load, given its extremely high velocity, accuracy in most guns, moderate recoil impulse, and affordability, really is something special.

New Designs From Kershaw Knives

Kershaw Knives and **Emerson Knives** have joined forces on a series of knives that combine the precision engineering of Kershaw with Emerson's uncompromising functional design.

The CQC-6K features a modified clip-point blade for versatile cutting ability. The blade has two finishes: a satin finish on the upper and a stonewashed finish on the grind. The handle's front scale of textured G-10 offers a secure grip and the handle's stainless steel back has a solid frame lock.

The CQC-6K is a manual opener using either the thumb disk or the patented Emerson "wave shaped feature." This opening feature enables the knife to be opened as it is removed from the pocket. The pocketclip is reversible for left- or right-handed carry.

Blade length: 3.25" Closed: 4.5" Open: 7.75"

O06-31320 \$54.99

Designed by Belarusian custom knifemaker Dmitry Sinkevich, the new **Kershaw Pub** looks like nothing you've ever seen.

Closed, you'd never know there was a handy blade inside – although you would definitely see the equally handy bottle opener. And if you were exceptionally sharp-eyed, you might notice the slotted screwdriver tip right next to the bottle opener.

To reveal the blade, just push down on what looks like the key ring attachment. You'll see the blade move out of the compact handle. Keep pushing and the blade will swing all the way out, ready for use. The blade is a modified sheepfoot with a straight edge and clipped rather than rounded tip. The handle has an anodized aluminum front scale in bright blue and a steel back.

Blade length: 1.6" Closed: 3.1" Open: 4.5"
