RUGER SILENT-SR[®]

TOP-TIER SOUND REDUCTION

REDUCES SOUND PRESSURE LEVELS OF .22 LR, .22 WMR, .17 HMR AND 5.7x28MM PISTOLS AND RIFLES BY UP TO 40 dB

The **Ruger[®] Silent-SR[®]** sound suppressor* features best-in-class materials and advanced design, resulting in a lightweight, compact size and top-tier sound reduction. It was designed and built by Ruger utilizing the very latest in fluid dynamic simulation and computer numeric controlled (CNC) machining equipment. The Ruger[®] Silent-SR[®] is easy to disassemble and clean. Each piece snaps together to seal the baffles and keep the byproducts of combustion away from the tube and end caps. It is also strong and light, utilizing a titanium tube, aluminum rear cap, and stainless steel threaded mount, baffles and front cap. Ruger has selected the best material for each part to maximize strength and minimize weight without sacrificing durability.

Compact and Lightweight
for Balance and Portability

Easy Disassembly for Cleaning

Compatible with a Host
of Ruger[®] Firearms

*Sound suppressors are not available in all states and locales due to laws restricting their ownership and use. Prior to purchasing, please check your state and local regulations to verify that you may legally possess a suppressor.

Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$48.95 each.

We READ Our Mail!

I just received my returned RL 550 B machine. I can't tell you how pleased I am with your service. The machine is in like-new condition. I'm planning to buy a second machine. Your products have always been top notch. Again, thank you for your excellent service.

Chester Levey –
Chetlevey@msn.com

I would like to comment on Robin Taylor's article on Pistol-Caliber Carbinas [July 2017 issue]. My AR-9 has a 16-inch barrel and with my handloads using VihtaVuori N-350 with an S&N 125-Gr. coated bullet, I'm getting 1340 fps velocity. I tried using my pistol loads of Clays with an S&N 125-Gr. coated bullet and I wasn't getting near enough velocity. My shooting session was cut short when I blew a case out. I think the reason people are getting less velocity out of a 16-inch barrel is because they are using a powder that's too fast burning. If people would use a slower-burning powder, I think they could get more velocity with a powder charge that wouldn't make minor in a pistol.

Leslie Salmons – lesliesalmons@peoplepc.com

After reading the June 2017 **Blue Press** article by Duane Thomas on using plated bullets for reloading, a conversation I had with Jake Wilcox – a manufacturer of plated bullets – came to my mind. He told me to always load a plated bullet the same as a lead bullet, and loading will be smooth. I have been using his plated bullets, some pulled, mostly newly manufactured by him in my .380, .45, and 9mm pistols and have followed this advice and never have had an issue. I always check my RL 550 function by chambering a round at the range when I make any die changes. I'll make one or two, then check them to ensure they fit well and will cycle. It might not be as easy as having the case gages to see if they are correctly crimped, but this is what most loaders have. The article was great and gave me many confirmations to my loading process with plated bullets.

Which Dillon is Right for YOU?

Page 8

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550C

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

Cacharme – H

By Mark Pixler

Carrying a firearm on a daily basis is no minor commitment, especially if it's not part of your job description. In principle, I agree with firearms trainer Clint Smith's quote: "Carrying a gun is not supposed to be comfortable; it's supposed to be comforting." In practice, however, if it's not comfortable, most folks aren't going to carry.

Experts agree that the best all-around method of carrying a firearm concealed is with it in a belt holster on one's strong side, and wearing some kind of concealing garment. Given that, one has

to wonder why there are things like shoulder holsters, bellybands, fanny packs, pocket holsters, small-of-the-back holsters, ankle holsters, faux-phone-case holsters, concealed-carry shoulder bags and briefcases, *et al.* The reason is, no single method of carry works best for everybody.

Greg Rocque, founder of Cacharme Systems, LLC – after taking his first concealed carry permit class – set out to develop a concealment system that would be one of the most concealed, most comfortable and most accessible holstering systems available. With that goal in mind, what Greg came up with is his company's Executive I blazer equipped with the Cacharme concealed-carry holster system.

It looks like a typical men's blue (or black) blazer, but it's equipped with a patent-pending suspension system designed to support the weight of a firearm, two magazines, and accessories like a folding knife, pepper spray container, tactical flashlight, and – for law-enforcement officers – handcuffs.

Integral to the system are patent-pending inserts that carry the holster and magazine pouches while distributing the weight evenly along the bottom of the pockets inside the jacket. Unlike the typical shoulder holsters worn by police detectives, etc.,

opening the jacket won't expose the firearm – it's well concealed inside the inner jacket pocket. In addition to the "special" pockets, the Executive I features the traditional pockets one would find in a blazer for your wallet, cell phone, money clip, keys, business cards, etc.

Cacharme Systems debuted the Executive I at SHOT Show 2017, and that's where I first saw it. It made sense to me, especially for anyone who regularly wears a sport coat. It's not at all uncommon to see people wearing sport coats with jeans, and it struck me as a lot easier to blend

into a crowd dressed that way than running around with a photographer's or fly fisherman's vest (*aka*, the "shoot me first" vest).

The operative term in concealed carry is CONCEALED, and near as I can tell, this method appears to be one of the best. You can open up the jacket nice and wide, and nobody can see a gun. There's no telltale tactical-looking fanny pack, shoulder bag, lump in your front pocket (Is that a gun in your pocket, or are you just happy to see me?), or on

your ankle (Dude, I know a doctor who can fix that...).

Greg says his ideal customer profile includes men who usually dress in a suit (a kit version of the patent-pending suspension system is available for those who want it in a custom-tailored suit), sport coat or blazer: judges, politicians, lawyers, doctors, law-enforcement agents, states attorneys, business owners, executives, security officers, and limo/taxi drivers. Again, I'd add that anyone who wants to blend into the "business casual" crowd would benefit from Cacharme Systems' method of carry.

Cacharme Systems, LLC

BL 550 Dillon's Basic Loader

\$274⁹⁵

N95-15399

Reloading Dies and Caliber
Conversions sold separately
(see the back of the order blank
in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount N95-22051 \$49.95

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Dillon's Strong Mounts

increase your machine's "foot-print" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 650	N95-22051	\$49.95
XL 650-only	N95-22052	46.95
"SDB"	N95-22223	65.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	N95-97126	\$149.95
----------------------	------------------	-----------------

Dillon's Roller Handle gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

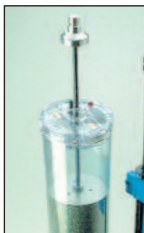

Aluminum Roller Handle	N95-17950	\$46.95
------------------------	------------------	----------------

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	N95-16306	\$41.95
--	------------------	----------------

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	N95-22214	\$42.95

Dillon's Case Preparation Equipment

CV-2001 N95-20493 \$189.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

CV-750 N95-19455 \$145.95

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To

CM-2000 Case/Media Separator N95-20675 \$75.95

CM-500 Case/Media Separator N95-21045 \$47.95

accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers: Case Cleaners are available in 220 volt!

Euro CV-2001 N95-22047 \$214.95
Euro CV-750 N95-19473 \$170.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners now have a **Five-Year Warranty** on the electric motor.

Rapid Polish

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run.

Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **N95-13804** **\$8.95**
Case (20 pc.) **N95-20255** **135.95**

Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **N95-13733** **\$8.95**
Case (20 pc.) **N95-20256** **135.95**

<i>Half and Half</i>	10 bottles of polish / 10 of lube

Super 1050/RL 1050 Short Trim Die Toolhead

N95-62219
\$224.95

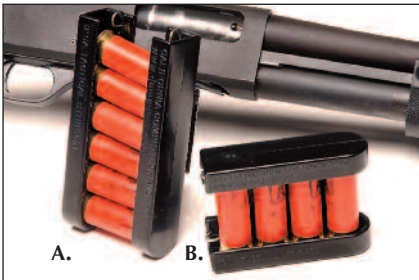

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. *(NOTE: the Blue 1050 toolhead stand - Part Number N95-62200, \$49.95 - is not included.)*

CCW Tactical Shotshell Strippers

California Competition Works' Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

Tandem Tactical Stripper **N95-00303** **\$55.00**

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device (C. & D.) that will accommodate up to a 2-1/4" duty belt.

A. Six-Shell Tactical Stripper	N95-18606	\$23.95
B. Four-Shell Tactical Stripper	N95-18605	22.95
C. Three-Shell Aluminum Stripper*	N95-19475	34.95
D. Six-Shell Covered Tactical Stripper	N95-19225	33.95

*Three-Shell Aluminum Stripper accommodates 2-3/4" shells only.

Dillon's New Rapid Trim 1500 Case Trimmer ²³

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **N95-62164** is **\$330.95**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **N95-13141**, are **\$19.95** each. Upper lock rings, **N95-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

y Mitch Rosen!

When we lost our supplier for Dillon Leather, we considered abandoning the gunleather business. Fortunately, we were able to team up with Mitch Rosen Extraordinary Gunleather to continue to offer a best-quality, made-in-the-USA line of belts and holsters. We know you'll like these products – we're happy to have our name on them.

Dillon's Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access, has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle

Conceal-Carry Performance Series

Conceal-Carry Performance Series revolver holsters can be worn strong side, appendix carry or cross draw and are fully molded. Auto holsters are strong-side only.

Mernickle's "Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original. This belt is a favorite with law enforcement, military personnel, fire-

fighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

ANNOUNCING: Mr. Bulletfeeder® by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

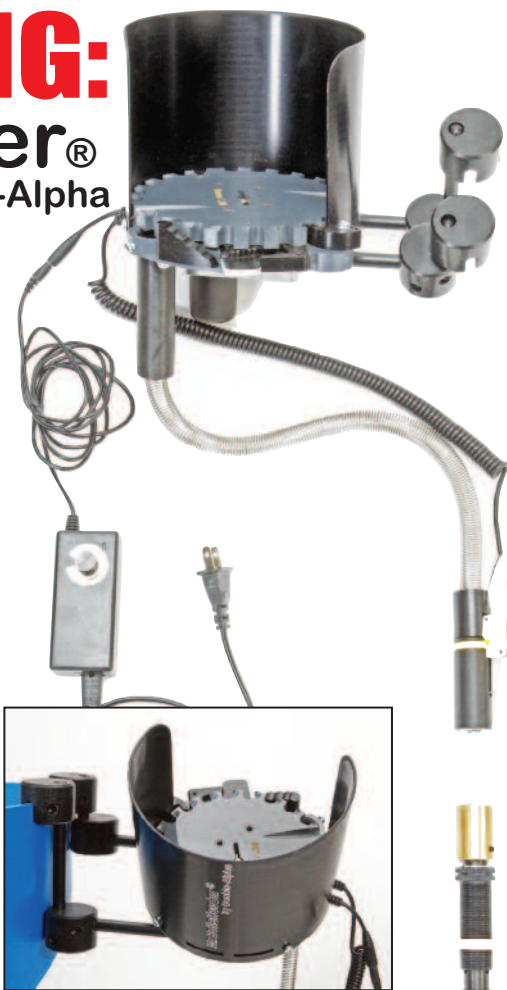

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collar to be mounted onto the case-feeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Mr. Bulletfeeder (Comes Set Up in One Caliber)

Mr. Bulletfeeder® Replacement Parts & Spares

Having separate Bullet Dropper Dies allows you to quickly swap toolheads of the same caliber sizes without having to remove and readjust the bullet dropper die.

The Output Tube Assembly is what connects the Mr. Bulletfeeder by DAA's collar to the dropper. It feeds the bullets into the dropper, keeping them aligned and feeding smoothly. The Small Output Tube Assembly is required for the rifle calibers (both .223 and .308) as well as when loading very short, light 9mm bullets, such as many of the 90-grain bullets available. The Large Output Tube Assembly is required when loading 9mm (over 115-grain bullets), .40, or 45.

Use a spacer? This four-pack of Nose Guide Spacers is identical to what comes with the Mr. Bulletfeeder. These are used to adjust the height of bullets, so they don't spill out or flip upside-down.

Dillon's Pistol Die Sets

Size Die

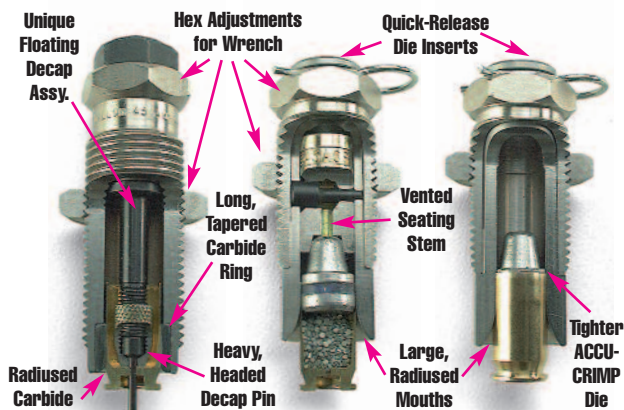

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the tool-head and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a head-space case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

By Peter Caroline

In northeastern New Mexico, in the shadow of the *Sangre de Cristo* Mountains, the hills are alive with the sounds of gunfire. Picture if you will 33,000 beautiful acres encompassing 17 active shooting ranges with every imaginable amenity for the dedicated shooter. This is the NRA Whittington Center, and every year it hosts Shootists Holiday, four glorious days of shooting, chatting and showing off new acquisitions. I have been privileged to attend these gatherings for the past six years...and I have noticed a peculiar phenomenon associated with the event: I invariably go home with more guns than I started out with.

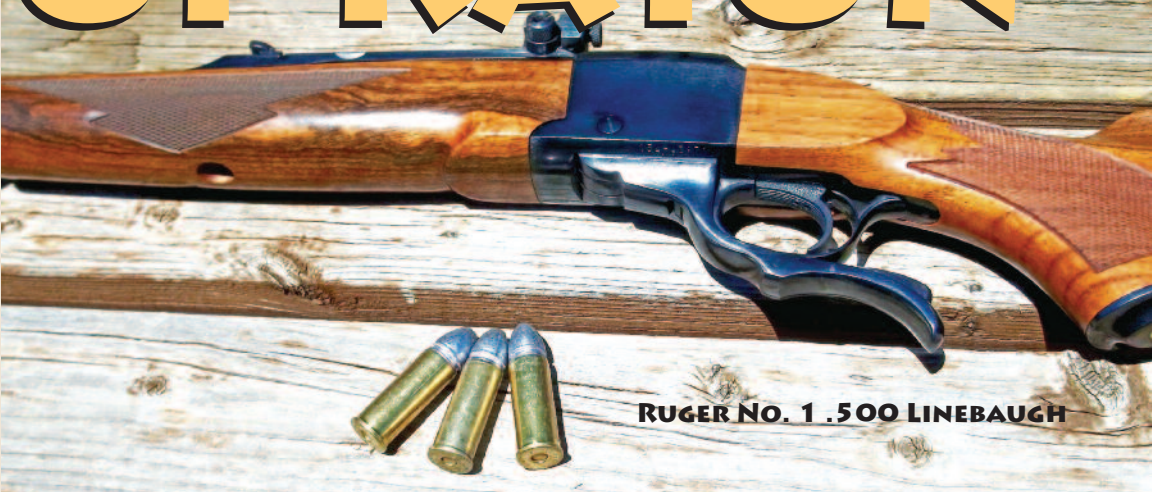

This year was no exception. Saturday morning, on my way up to Raton, I stopped at my friend Bill Berlat's place in Lakeside, Arizona. He dragged me, kicking and screaming, to the Hub, a nearby firearms emporium. Not a good move, budget-wise. I spotted a used Ruger No. 1 in .30-06, complete with compensator, scope mount and rings

and nicely grained wood...with an irresistible price tag. I thought it would go quite well with an older Weaver K4 scope I already had, so I bought it, as an investment of course.

On Sunday, I made the seven-hour drive to Raton, and arrived at the Melody Lane motel, a popular staging area for the Shootists. One of our group, a distinguished gentleman from Tennessee, had brought along a large quantity of chocolate fried pies, a regional delicacy similar to an *empeneda*, only far better. The conversation, as always, centered around guns and who would be showing up this year, or not. One of our number, a noted Texas quick-draw artist, had other commitments, which was truly regrettable, because he usually was accompanied by an enviable assortment of museum-quality firearms.

Early Monday morning, at the Whittington Center, I attended a get-together where we viewed the annual raffle prize table. One of the more impressive items on the table was a custom-engraved

OF RATON

RUGER NO. 1 .500 LINEBAUGH

ABOVE: KINGSTON ARMORY .22 LR M1 GARAND, LEFT: CASED SKEETER SKELTON TRIBUTE

Ruger Bearcat Shopkeeper .22 revolver, beautifully casehardened by Tyler Gun Works (www.tylergunworks.com), almost too pretty to shoot. After the meeting, we proceeded to the Pistol Silhouette Range, where most of our activities were to take place. Freedom Arms had their usual impressive array of precision-crafted revolvers and single-shot pistols spread out on a long table; Ruger was displaying their new temptations and, all up and down the line, individual Shootists were displaying an almost endless variety of custom, antique and just plain unusual guns. One memorable treasure was a cased pair of engraved .44 Special revolvers...a color casehardened Ruger single action and a stainless Smith & Wesson, both clones of guns owned by noted gun writer Skeeter Skelton. The lid of the case displayed a portrait of Skeeter, and a drawer below the guns contained an original handwritten Skelton manuscript detailing the .44 Special cartridge and guns. The above-mentioned Tyler Gun Works was showing off a

bevy of color casehardened pistols and revolvers including, to my surprise, several in stainless steel. I never imagined that stainless could be color casehardened, but Bobby Tyler does it, and very nicely indeed.

At noon, I took a break for lunch, and visited the Whittington Center gift shop, where I picked up a box of .30-06 cartridges for my newly acquired Ruger No. 1. The shop sells new guns, but they also have a 3-ring binder that lists used guns for sale. This has been my downfall for several years. You never know what you'll find. This year, the first thing that caught my eye was an M1912 Frommer Stop, a .32 ACP pistol issued to the Hungarian component of the ill-fated Austro-Hungarian Army. It is, to put it mildly, an oddity. And the price, \$175, was more than fair. I immediately added it to the Caroline Collection of Strange Things That Go "Bang."

I did actually get to do some shooting that day.

MODEL 1914 .32ACPS**

I had brought along a new Ruger Mark IV .22, a polished stainless CZ 75 9mm and a .380 ACP CZ 83. In the revolver department, I had a 1948-vintage S&W K22 Masterpiece, a Cimarron Bisley .44 Special, a nickel-plated S&W Model 10 and a Taurus model 85 .38 Special snubbie (which turned out to be surprisingly accurate). I brought just one long gun, a Kingston Armory .22 LR M1 Garand, which was a great favorite of all who tried it out.

The next day was more of the same. I had been ogling a museum-quality custom-engraved 7.65mm Walther PP with white grips and an extended tang. The owner asked me, "Do you want to shoot it?" My response was, "Do you actually shoot this treasure?" It was, indeed, a delight to shoot.

At lunchtime, I went back to the gift shop and again checked out the used-gun list. I spotted a Mauser .7.65mm Pocket Model 1914, which was brought down from the Magic Attic for my inspection. It was in about 75-80 percent condition, but the slide was stuck open, and the magazine

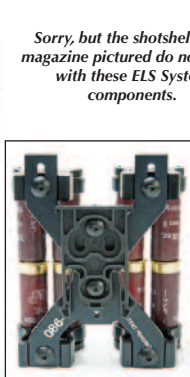

required some serious coaxing before it could be removed. Well, I do enjoy a project, and we quickly agreed on a discounted price. When I got back to the range, I used my specialized BRM tool (Big Rubber Mallet) to move the slide forward. Further improvements will follow.

The last two days of the Holiday flew by all too quickly. I watched someone shooting a beautiful commercial Navy Luger, and managed to get a few photos. I did have an opportunity to fire a handsome Ruger No. 1 chambered for .500 Linebaugh. But I declined when I noticed that the previous shooter was bleeding from a slice sustained by getting his hand too close to the tang-mounted safety. Ditto a rare Linebaugh single action revolver chambered for .458 Maximum, a cartridge better suited to crew-served weapons.

Thursday evening's banquet and raffle marked the end of four wonderful days of good fellowship and sensory overload. Lord willin' and the creek don't rise, I'll do it again next year.

RANGE TIME. ANYTIME.

Our Pistol Perfect bullet traps make range time, anytime a real possibility.

Available in 3 different sizes, each trap can handle handgun calibers up to .44 Magnum, and rifle calibers up to .223/5.56mm.

Our patented bullet trap technology ensures the shooter of a safe, clean, virtually maintenance free way to target practice. Lead is deposited into a collection pail, which can be recycled or sold. Talk about convenience!

Visit our website to see which Pistol Perfect Trap will work best for you.

CLASSIC FIREARMS: The Hi-Star

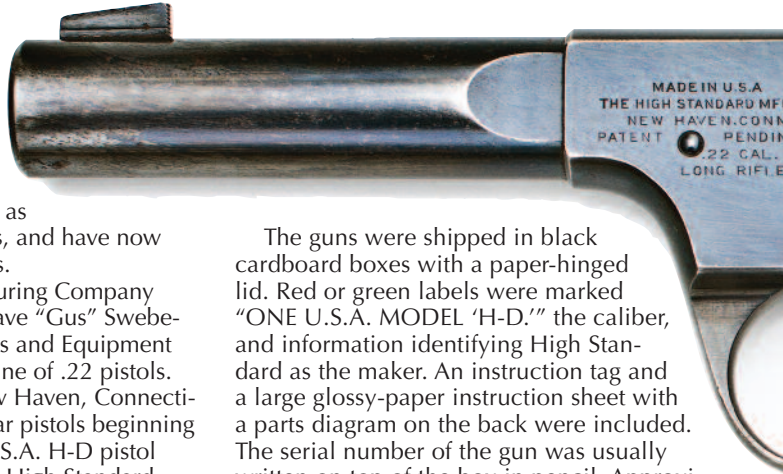

By John Marshall

Among the many U.S. firearms of the World War II period, the .22 rimfire training arms are often overlooked, but in many ways are no less important than their centerfire cousins. The Hi-Standard U.S.A. Model H-D Pistol is one particular example. Thousands of these guns were produced to train U.S. service personnel economically in the fine points of pistol marksmanship. Some of these pistols were also fitted with effective sound suppressors for covert use, and one of these was even fired within the White House while President Franklin Roosevelt was present. The U.S.A. H-D pistols were specifically marked as United States military issue guns, and have now become sought-after collectibles.

The High Standard Manufacturing Company began in 1926, when Carl Gustave "Gus" Swebelius purchased the Hartford Arms and Equipment Company, a manufacturer of a line of .22 pistols. Swebelius's firm, located in New Haven, Connecticut, continued to produce similar pistols beginning in the 1930s. The story of the U.S.A. H-D pistol began in January of 1940, when High Standard began the manufacture of a gun somewhat similar to their previous .22 pistols, but equipped for the first time with an exposed hammer. This was their Model H-D. While some of their previous firearms had been bought by the U.S. government as trainers, this newer commercial pistol caught the eye of War Department officials because it was operated similarly to the standard Colt 1911A1 .45 pistol. Accordingly, beginning on September 9, 1943, suitably modified and marked pistols began to be shipped to the U.S. military for training purposes.

This new gun differed in a number of ways from its civilian counterpart. The marking on the left of the slide was "HI-STANDARD / U.S.A. MODEL H-D." All of these were fitted with heavy 4-1/2" barrels, most of which were stamped on top with the marking "PROPERTY OF U.S.A." The right side of the frame was marked "PROPERTY OF / U.S." While the commercial pistols had been provided with an adjustable rear sight, the sights on the U.S. models were fixed but could be drifted laterally for windage adjustment. The issue pistols were also equipped with an external thumb safety located similarly to that on the M1911 and M1911A1 .45 pistols. Earlier-manufactured pistols were blued, while those of later production were Parkerized. Black checkered hard rubber grips were standard, with no maker's monogram. Complete serial numbers were stamped on the forward grip strap, and the last 3 or 4 digits were stamped

on the bottom of the slide. Specific service markings have been noted on some guns (applied after manufacture), such as "U.S. NAVY." Most were marked with an Ordnance escutcheon acceptance mark on the right side of the frame, although a number in 1944 were shipped to the War Department without it. The gun illustrated, made in October of 1944, does not have this mark.

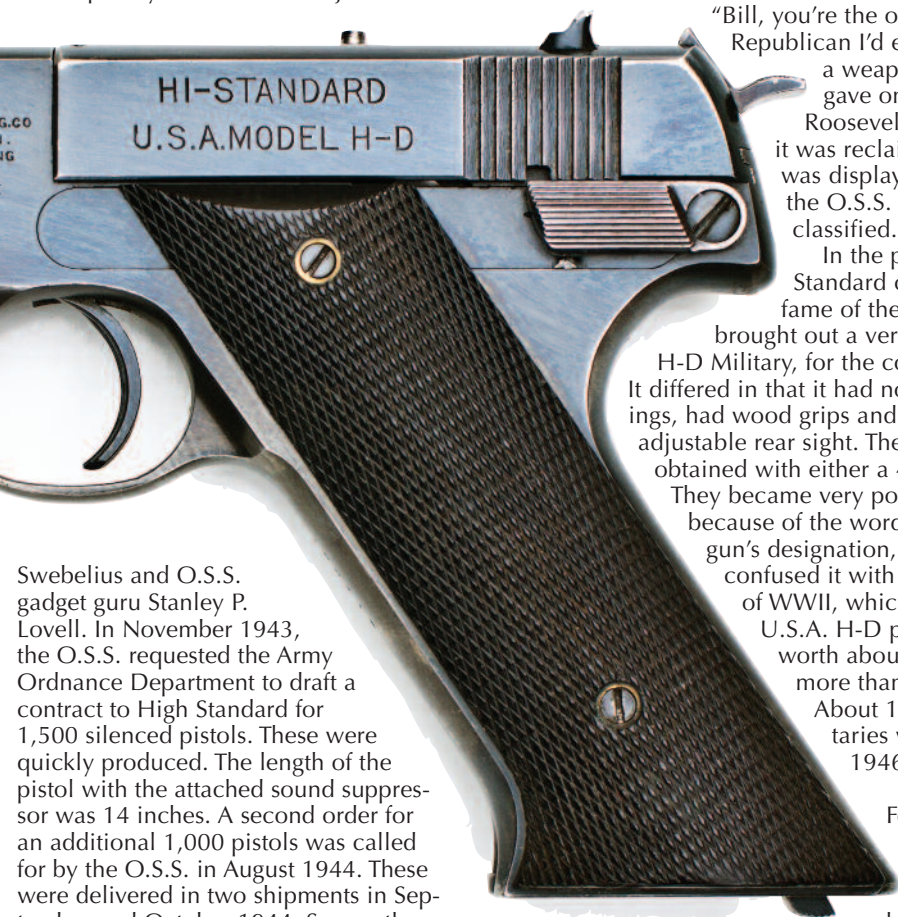

The guns were shipped in black cardboard boxes with a paper-hinged lid. Red or green labels were marked "ONE U.S.A. MODEL 'H-D.'" the caliber, and information identifying High Standard as the maker. An instruction tag and a large glossy-paper instruction sheet with a parts diagram on the back were included. The serial number of the gun was usually written on top of the box in pencil. Approximately 32,000 were shipped from 9/2/1943 to 5/12/1945, with serial numbers running from roughly 103863 to 149481.

"In November 1943, the O.S.S. requested the Army Ordnance Department to draft a contract to High Standard for 1,500 silenced pistols."

Standard U.S.A. Model H-D Pistol

A number of U.S.A. H-D pistols were equipped with sound suppressors and shipped beginning in late January 1944. These went to the War Department, primarily for use by the O.S.S. (Office of Strategic Services – forerunner of the Central Intelligence Agency). These were designated as the Model U.S.A. H-D MS. The “silencers” were developed by Bell Labs in conjunction with Gus

Swebelius and O.S.S. gadget guru Stanley P. Lovell. In November 1943, the O.S.S. requested the Army Ordnance Department to draft a contract to High Standard for 1,500 silenced pistols. These were quickly produced. The length of the pistol with the attached sound suppressor was 14 inches. A second order for an additional 1,000 pistols was called for by the O.S.S. in August 1944. These were delivered in two shipments in September and October 1944. Some other orders were apparently placed in 1945, but the details of if, when and where are hazy. Jacketed .22 bullets, developed for Air Force survival guns, could be used interchangeably with regular lead-bulleted cartridges. General William J. “Wild Bill” Donovan, the O.S.S. chief, issued a directive that uniformed personnel were to use only jacketed-bullet ammunition in the guns. For non-uniformed use, the lead bullets apparently posed no legal problems and would probably be the least of an undercover agent’s worries.

General Donovan, a World War I veteran, was a colorful character. It was reported that he had smuggled one of the silenced H-Ds into the

White House, and while President Roosevelt’s back was turned to sign some papers in the oval office, Donovan fired a full magazine from the gun into a small sandbag. Noting no reaction from Roosevelt, Donovan wrapped the smoking gun in a handkerchief, handed it to the astonished President, and explained what he had done. Roosevelt is said to have remarked,

“Bill, you’re the only wild-eyed Republican I’d ever let in here with a weapon.” Donovan later gave one of the guns to Roosevelt. Shortly thereafter, it was reclaimed from where it was displayed in Hyde Park by the O.S.S. because it was still classified.

In the post-war years, High Standard capitalized on the fame of the U.S.A. H-D. It brought out a very similar model, the H-D Military, for the commercial market. It differed in that it had no government markings, had wood grips and utilized an adjustable rear sight. These guns could be obtained with either a 4.5” or 6.75” barrel. They became very popular. Today, because of the word “military” in this gun’s designation, some folks have confused it with the issue weapon of WWII, which it resembles.

U.S.A. H-D pistols are currently worth about three to four times more than these later guns.

About 150,000 H-D Militaries were produced from 1946 to 1955.

In 1960, former Air Force Captain Francis Gary Powers’ CIA U-2 surveillance aircraft was shot down over the Soviet

Union. He was found with an U.S.A. HD MS silenced pistol, the serial number of which was not listed on High Standard’s books. It was prominently displayed at his spy trial by the Soviets. Powers was released after a year at hard labor, but never got his gun back.

The U.S.A. H-D pistol served honorably as a training pistol during World War II, and in its sound-suppressed version it was employed covertly. Unfortunately, not much is known about how and under what circumstances the silenced pistols were used. Both versions are interesting relics of the war years, and collector demand for them is high. They are classics.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

N95-21894 \$44.95

Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Berry's Mfg. Pan Sifter

N95-17519 \$9.99

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

N95-19972 \$39.95

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mms.

Made in the USA and comes with a lifetime warranty.

THE WALTHER

“THE FRONT OF THE TRIGGER GUARD IS NICELY ROUNDED, WITHOUT ANY ‘HOOK’ OR SERRATIONS. AT LAST, THEY UNDERSTAND THAT HARDLY ANYONE STILL USES THAT VERSION OF A TWO-HAND HOLD.”

By J. B. Wood

In today's world of full-sized 9mm polymer-frame and striker-fired pistols, there are numerous similarities. The new Walther Creed is not one of them. First of all, it's not striker-fired. There is a pivoting hammer, and mechanically, its action is unique. More on this later.

This firing system was first seen around four years ago, in the excellent Walther PPX. Over at the factory in Ulm, the design engineers never sleep. They are always looking for ways to make a good design better. The Creed shows this well, especially in some things it does not have.

For example, the front of the trigger guard is nicely rounded, without any "hook" or serrations. At last, they understand that hardly anyone still uses that version of a two-hand hold. And, a rounded guard makes re-holstering so much easier. Also, at the back of the grip-frame, the perfect contour doesn't need any "inserts."

There is no silly "flipper" safety in the trigger and its surface is wide and not serrated. No maga-

zine-disconnect safety. Internally, there is an automatic firing-pin-block that is cleared in the last fraction of trigger pull.

The only external controls are the slide latch and magazine release, both in easy thumb-reach on the left side. The takedown lever is forward, above the trigger. The only nod to left-handers is that the magazine release is reversible. No, wait – the release button is shielded, on both sides, by a moderate protrusion that can be a thumb rest.

The square-picture sights are low profile, with three white dots. The rear sight can be drifted laterally in its dovetail, and the notch is comfortably wide. The slide has good retraction grooves at both front and rear. If you want to mount a light or laser, the lower front of the frame has a standard rail.

The finish on the metal parts is matte-black Tenifer. The Creed is a full-sized pistol. The numbers: Weight is 27 ounces. Overall length, 7.47 inches. Height, 5.50 inches. Width, 1.25 inches. Barrel length, 4 inches. Magazine capacity is 16 rounds.

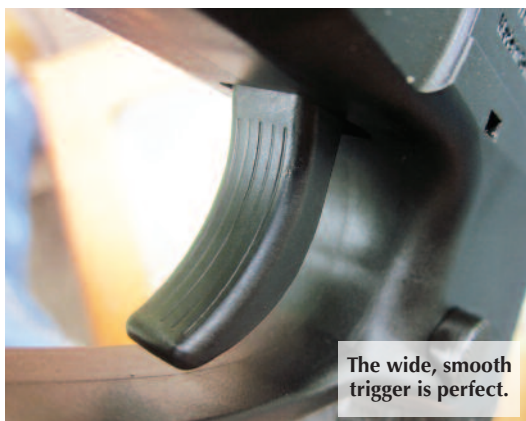

CREED PISTOL

Left & Above:
The Walther Creed,
left and right sides.

The controls: Takedown
lever, slide latch, and
magazine release.

**The wide, smooth
trigger is perfect.**

**Takedown and
reassembly are easy.**

When the button is pushed, the magazine is smartly ejected. If you're in bad conditions, and grit has gotten inside, there are serrated side tabs on the floorplate, so you can pull it out. The large floorplate also assists in positive seating.

I would describe the firing system as "semi-double-action-only." When the slide is cycled to load the chamber, the sear does not engage the hammer. Instead, it holds the hammer strut and the compressed spring. So, when you do the 3/16-inch trigger take-up, you are compressing only the trigger spring and a light hammer-positioning spring.

After that, there is what amounts to a nice single-action let-off. According to my Lyman electronic gauge, the final pull weight averages between 4 and 5 pounds. There is no significant overtravel. During the trigger pull, the hammer emerges at the rear of the slide and frame, so you know when it's about to go.

At the range, I tried out the Creed at 25 yards and the classic "encounter distance" of 7 yards. Standing, with a two-hand hold. All shots were well centered in the 8-inch black of the Champion

VisiShot targets. At the longer range, groups averaged 4.5 inches. Closer in, one marvelous group measured just over 2 inches.

Ammo used was the new Honey Badger load from Black Hills. Don't be deceived by the cute name. Honey Badgers are vicious little beasts, and the unique bullet shape gives both penetration and pronounced terminal effect. Functioning was flawless, and felt-recoil was mild.

Takedown for cleaning is particularly easy. With the magazine out and the slide locked open, the lever above the trigger is turned downward. Restrain the slide, release the slide latch, and take of the slide assembly toward the front. Take out the captured recoil spring unit, then the barrel, and that's it.

You may be surprised at the suggested retail price: \$399. For Walther quality and performance, a bargain. The contact data:

RCBS Trim Pro-2™ Case Trimmer N95-43231 \$139.95

The RCBS Trim Pro-2 manual case trimmer now features a spring-loaded "universal" shell holder that will accommodate case head diameters from .250" to .625". Comes with pilot calibers: .22, .24, .25, .27, .28, .30, .35, .44 and .45.

Dillon's Bench Wrench Fits 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

1" Dillon Die Lock Ring	N95-14067	\$13.50

Elzetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

Shooting Tip: **Acce**

By Duane Thomas

Recently I was talking to a friend of mine, Hector Lazcano, prior to a match, and he was lamenting that he'd let another friend modify his holster for him, and that guy had done so by applying a piece of skateboard tape to the inside of the sweat shield, which in short order had removed most of the black finish from his GLOCK 19's slide-cocking grooves on the left side of the gun.

He showed that to me, my comment was, "But that looks good. I think guns look better when they've got some serious wear on them. That says to me this is a gun that's really being USED. I actually did an article on that topic for *The Blue Press*, it was called 'Wearing a Gun.'"

I whipped out my GLOCK 17, pointed down-range (indoor range, we were the only two people on the range), "I mean, look at the amount of wear on my carry gun."

"Oh yeah! That's what I want, I love the way the finish at the front of the slide is just GONE, because the gun has been in and out of a holster so many times."

"Well, you've got that sort of wear now, on the slide cocking grooves."

"Yeah, but I want to earn that. I don't want to just get it all at once because someone screwed up my holster. This guy also does Cerakote [Firearms Coatings], I'm going to have him refinish my slide to repair the damage he did." He looked more closely at my GLOCK's slide. "Is that Cerakote? Your slide is glossier than mine."

"The older GLOCKS were like that, they had this sort of semi-gloss finish right out-of-the-box. Whereas newer GLOCKS like yours have that flat black finish."

Fast-forward a month, I'm back at the same range, we're both working on set-up before the match, Hector tells me, "Oh, I had the slide on my GLOCK Cerakoted, want to see?" He seemed really enthused. (Again, we were the only two people on the range.)

"Sure," I said. I figured he'd gotten it refinished in black, maybe the Cerakote had a semi-gloss appearance, so now his newer GLOCK's slide looked more vintage, like mine. I was all set to be complimentary, I had my smile pre-staged on my face. He pulled his G19 out of the holster and proudly handed it to me, pointed downrange. I looked down at the gun in my hands and literally felt the smile wither on my face.

"It's...purple," I said.

"Yeah, isn't that cool?"

"But...it's PURPLE."

He scowled, grabbed the gun out of my hand and reholstered it. "Yeah, well, Duane, I'll tellya what, women really like the purple. I've had a couple of women

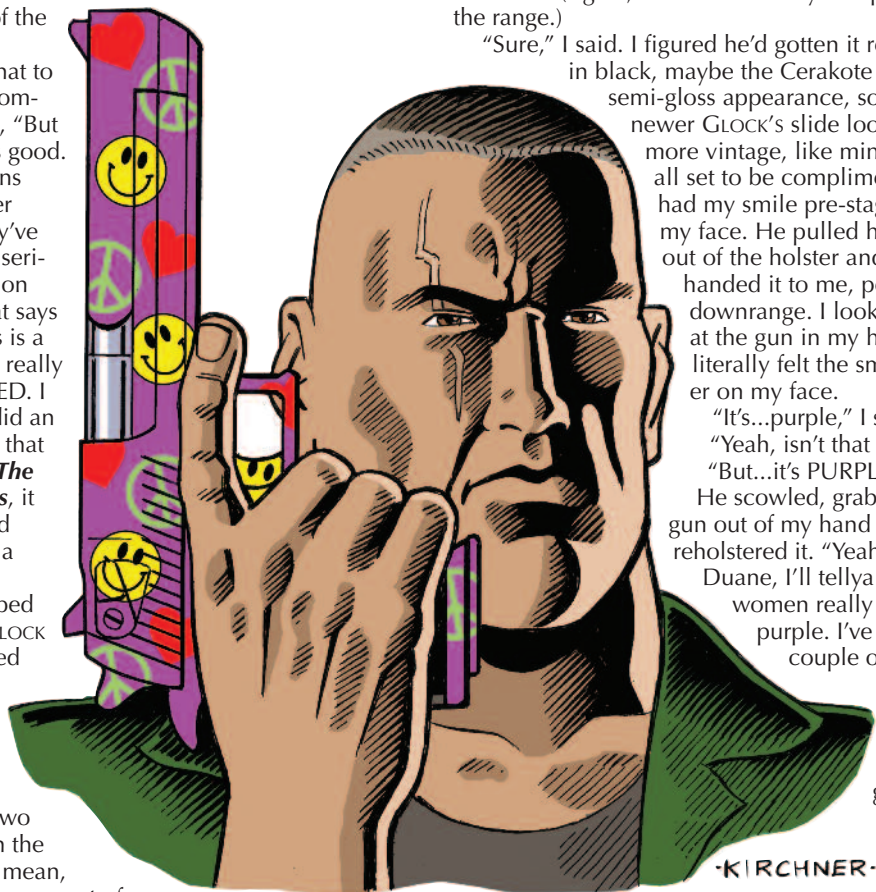

tell me, 'That's a really cute gun.'"

"Well, they're right. That a

really cute gun now." I was laughing. I probably shouldn't have teased him about his purple GLOCK slide, but I did. Hey, what are friends for?

Okay, here it is, gang. Let's clear this up right now. There are only two completely acceptable colors for a gun's major metal components: black and silver. We will, at the very outside, accept dark gray, as in Parkerizing. That is IT. Period, end of story. Light Gray and Flat Dark Earth indicate a person has played WAY too much Call of Duty.

If it's a purely recreational piece, i.e. a .22 rifle or handgun that will only ever be used for fun shooting, we'll accept the laminated stocks that mate multiple colors, like green, blue, red, etc.

Acceptable Gun Colors

Because if we're only going to use it as a toy, who cares if it LOOKS like a toy instead of a serious weapon?

For grips, assuming your gun has wooden or bone grip panels, we relax the rules on acceptable color. Wooden or bone grips can range anywhere from white to cream to light brown to reddish brown to dark brown to black and anything in-between. But only for the grips.

EXCEPTION: If you are female, we grant a special exception for pink. As men, we have learned, through observation, there is just something about certain women and pink. We accept this as part of the feminine mystery we will never truly understand.

One of my Internet friends, and a serious shooter, Liota Wakal, actually has a pink AR-15. With Hello Kitty stickers on the stock. As she's said, "I'm not one of those people who has a hard time knowing which rifle to pick out of the rack because theirs looks the same as everyone else's."

There used to be a very good firearms instructor in Washington state (she moved away years ago, sadly) named Dee Dee Orive. And Dee Dee was all about the pink. Her carry gun was a SIG P228. She had Blade-Tech make her a pink carry holster, and a pink magazine pouch. She did, in fact, use those as her daily concealed-carry rig. One of the great tragedies of her life was that she wasn't able to get pink grips for her P228. Because if she could have, she would have. She had checked into the possibility of powder coating the entirety of the P228's metal components pink, and was upset that didn't seem to be a happening thing either. As Liota could tell her, the state of the art in that regard has since changed.

Dee Dee was actually a really good shooter with her P228. That's a gun with a long trigger reach, and a double-action first shot, which would not work well for most women, but Dee Dee, while not a large woman, had very long fingers for

a woman her size, and extraordinarily powerful hands. I remember attending a Massad Ayoob class LFI class with Dee Dee, on the final qualification I shot 297 out of a possible 300 with my own P228. Dee Dee was very complimentary on my shooting, "You shot SO well." I said, "Well, look at you." "Oh no," she said, "You shot MUCH better than me." Dee Dee had "only" shot a 295.

Dee Dee was an excellent firearms instructor: knowledgeable, skilled, friendly, charismatic. She was good at communicating to her students just how bloody COOL is this whole "shooting" thing. And she had her own school shirts (pink, of course) with her school logo on them, which was a unicorn. That was also her approach with school flyers: pink with a unicorn on the front.

I was once standing in a gun shop, that happened to have a stack of Dee Dee's class flyers laying on the front counter by the cash register, when a young, blond, muscular guy with a high-and-tight haircut (might as well have been wearing a sign that said RANGER) said to the man behind the counter, "I'm looking for some training. I want to get better at shooting a handgun." I have to applaud him for that. The counter guy picked up one of Dee Dee's flyers and tried to hand it to the soldier. Who reacted like a vampire

being offered a slice of pizza with extra garlic. He literally recoiled. He actually took a step backward in horror, away from what was being extended toward him.

"It's...pink," he said.

I wandered over. "I happen to know the instructor for these classes. She's a really good shooter, and a really good instructor. She could teach you a lot about how to shoot a handgun better."

"But it's PINK. I'm not going to any class with a pink flyer," he said.

Now THERE was a young man with a firm understanding of the importance of acceptable color as it relates to guns. And gun-class flyers.

"There are only two completely acceptable colors for a gun's major metal components: black and silver. We will, at the very outside, accept dark gray, as in Parkerizing. That is IT. Period, end of story. Light Gray and Flat Dark Earth indicate a person has played WAY too much Call of Duty."

Extra Loading Data Labels, N95-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL650 cartridge bins are 6-3/4" long x 3-

7/16" wide x 2-13/16" deep.

- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Swab-its – A Swab for Every Job! ⁶⁵

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that “whisky-tango-foxtrot” look on his face. “Hi,” I said (*thinking fast*), “I’m trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!” The **Bore-tips Swabs** REALLY DO work. What you can’t see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

NEW!

Oregon Trail Defense Firearms Stippling Kit – If your firearms are tools, and not pretty things to sit in a safe, then you may want to consider investing in a stipple kit and getting some grip on your guns! Stippling provides you with as much or as little grip as YOU need on YOUR gun. This Custom kit features a USA Made Wall Lenk 25-Watt Stippling Gun.
OTD Stippling Kit **N95-12370** **\$64.99**

M-PRO7

M-PRO7™ Gun Cleaner is odorless, non-toxic and biodegradable. "Safely cleans rifles, handguns, shotguns..., black powder, corrosive priming deposits and much more."

4 oz. **N95-10139** **\$11.95**

8 oz. **N95-10138** **18.95**

32 oz. **N95-11298** **40.95**

M-PRO7™ Copper Remover works up to four times faster than ammonia-based cleaners and is odor free.

4 oz. **N95-19370** **\$11.95**

FrogLube

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

4 Oz. Paste **N95-15443** **\$10.99**

4 Oz. Liquid **N95-15444** **17.59**

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is for use in warm weather (F60+), Lite is a thinner viscosity for lower temperatures (F30+).
Slide-Glide Standard **N95-15571** **\$7.95**
Slide-Glide Lite **N95-15572** **7.95**

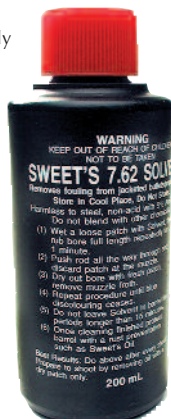

Microlon UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

N95-75125 **\$9.95**

Sweet's Australian 7.62 Solvent

easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

Scout Scope Mounts for AK, SKS Rifles

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle **N95-25374 \$79.99**
 Scout Scope Mount for SKS Rifle **N95-25373 78.99**

Mortarman Dick Dillon with his carbine shortly after V.E. Day, near Pilsen, Czechoslovakia. Private Dillon's 79th Division relieved Patton's Armored units, in which his older brother, my Uncle Jack Dillon, was serving, as the easternmost American forces during the European War. Dad greatly preferred the .30-06 Garand for "rifle distance" shooting, but thought that the carbine was just fine for "pistol distance" defensive work.

By Brian Dervin Dillon, Ph.D.

First came the experimental smoothbore "hand gonne" more than 500 years ago. Shortly afterwards came the matchlock arquebus, with shoulder stock and rudimentary trigger. Exclusively an infantry weapon, mounted men would have to wait for the invention of better ignition systems before any kind of firearm could be carried on horseback. With the wheel lock, and then the flintlock, came the pistol and then the short-barreled musket or carbine, the earliest practical guns for cavalry applications. Yet, even through the Napoleonic Wars these were considered secondary to the primary cavalry weapon, the sabre. Meanwhile, rifling made its appearance in Germany, and then was enthusiastically adopted in North America. The shortcomings of traditional cavalry arms, compared to the new, long-barreled "rifles" put horsemen at a serious disadvantage against men on foot with the new, long-range, "rifled" guns.

The solution, of course, was to issue horsemen their own short-barreled rifles. By the time of our Civil War, the cavalry carbine was not only rifled, but was amongst the earliest of all guns designed for metallic cartridges. And cavalry tactics, which had previously favored the sword, changed as well. Cavalrymen now functioned primarily as "mounted infantry," their most important weapon the short-barreled cavalry carbine. By the 1870s the term "carbine" came to mean much more than just a short-barreled rifle: it was the lightweight, handy, "go to" gun of the American western frontier. The favorite of cowboys, Indians, and soldiers alike, the carbine was, purely and simply, the firearm best suited for any horseman with both hands free. Sharps were followed by Spencers, and Spencers by Springfields. The last of the breed to be found in U.S. Cavalry scabbards was the short-barreled carbine version of the .30-40 Krag.

At the dawn of our involvement in WWII, horses were all but gone from the U.S. military, and with them the old carbines. But a new demand for a "short rifle" had emerged as the American army became more and more specialized. Fewer soldiers, by percentage, were now "front line" troops, i.e., riflemen, who still needed the standard-length rifle. And so the U.S. Carbine .30 Caliber M1 was born. The M1 Carbine was invented to replace a pistol that most soldiers just couldn't control, and was intended for short-range defensive purposes, not long-range sniping. As originally conceived, it was for artillerymen, mortar-men, even truck drivers and combat engineers who would never be issued the standard combat rifle, and who couldn't hit the broad side of a barn with a 1911 .45. The pistol was not obsolete, just limited now to pilots, tankers, and officers. When my Army Air Corps Cadet father qualified with the .45 ACP in 1943 he

had the unusual distinction of hitting, and severing, the thin steel cable holding up his paper target and its backer. For a brief time he was thought to be the most expert pistolero on the range, until he failed to duplicate his marksmanship feat. The pistol, in any case, would only have been issued to him upon getting his wings. Dad unfortunately failed navigation, piloting his single-engine plane to Springfield, Missouri instead of Springfield, Illinois on his final exam, so he washed out of the Air Corps. Sent to the infantry, he became a mortarman, with the U.S. Carbine, .30 Cal M1 as his issue weapon. Like most WWII G.I.s, my father preferred the .30-06 Garand for "serious" rifle work, but loved his carbine for short-range defense and trusted his life to it.

More M1 Carbines were manufactured for American forces than any other military arm. By conservative estimate something like 6,221,220 of them in four different variations were made during a period of just over three years, between June of 1942 and August of 1945. From the start the little carbine was a Winchester idea, and that company took the lead on developing both the round and the gun. The M1 Carbine was designed, not for a full-sized rifle round, but for a hot pistol-sized cartridge instead. The Thompson .45 ACP submachine gun was already in army stocks, but the Tommy Gun weighed twice what the Carbine design specifications called for. So did the German Schmeisser, the MP38, chambered for the 9mm Luger cartridge. A brand new cartridge was needed for the brand-new design, once the .45 ACP cartridge was rejected as too heavy and bulky, and the 9mm as too slow and ineffective. The final M1 Carbine cartridge was developed from the old (1905) .32 Winchester self-loading cartridge, and looked like a stretched .32 Auto Pistol round. With a 110-grain round-nose, elongated bullet that cooked along at just under 2000 fps, it was much faster than the Schmeisser bullet. Trials were held in May of 1941, and eventually 11 different manufacturers were commissioned to produce the winning, Winchester, U.S. Carbine, .30 Cal M1 design: Inland Div. (Inland Manufacturing Division of General Motors), I.B.M. Corp (International Business Machine Corporation), Irwin-Pedersen (Irwin-Pedersen Arms Company), National Postal Meter (Company), Quality H.M.C. (Quality Hardware and Machine Company), Rochester Defense Corporation, Rock-Ola

Manufacturing Corporation, Saginaw SG (Saginaw Steering Gear Division of General Motor), Standard Products Company (Std. Pro.), Underwood (Underwood Elliot-Fisher Company), and Winchester Repeating Arms Company.

Carbine variants were comparatively few, and changes were given standard military alphanumeric designations. The first-model carbines had simple, fixed, two-position rear "leaf" sights, which could be flipped up or down to select a wide aperture for close-range work, or a smaller aperture for longer-range accuracy, optimistically out to 300 yards. These early guns had no provision for mounting bayonets. Five and a half million of just the first variant were made. Many of these were upgraded by Korean-War armorers with the addition of adjustable rear sights and

THE FINAL M1 CARBINE CARTRIDGE WAS DEVELOPED FROM THE OLD .32 WINCHESTER SELF-LOADING CARTRIDGE, AND LOOKED LIKE A STRETCHED .32 AUTO PISTOL ROUND.

the later barrel band with bayonet lug. "Improved" carbines got better rear sights, fully adjustable for windage, incrementally for elevation, with graduations for 100, 200, 250 and 300 yards distance, and protected by vertical flanges on either side. Of all the soldiers who carried the carbine in combat 99.99 percent never shot it at any greater range than 100 yards: consequently, the elevation adjustment was usually left in the "full forward" position. These later M1 Carbines could also mount bayonets, via a short barrel sleeve with elongated rectangular lug at bottom, part of a redesigned barrel band assembly. Once again, if later troops issued the M1 Carbine were trained in the use of the

bayonet, 99.99 percent of them never had occasion to mount it, and then use it in combat.

The second major M1 Carbine variant became known as the M1A1 when the little gun was modified for use by airborne troops after May of 1942. The wooden shoulder stock was replaced with a pistol grip faired into the rear of the trigger guard, and a rudimentary, thick metal wire folding stock. Although comparatively few (roughly 140,000) were produced during WWII, conversion kits were offered in postwar gun shops and even surplus stores. Hundreds of "standard" carbines were converted to ersatz "paratrooper" M1A1 imitations in the 1960s, mostly as curiosities. A major change came late in WWII, in May of 1945, with the introduction of the M2 Carbine, now with a "giggle switch" or selector on the right side of the receiver, still inside the stock, that allowed for either semi- or full-auto fire. To accommodate

80 these fully automatic carbines a new, 30-round magazine with a pronounced “dog leg” bend was introduced. Approximately 570,000 full-auto M2 Carbines were made and more were modified from M1 guns with “drop in” parts. Few saw service before WWII was over, but many were used in the Korean War and valued for their reliability. The final carbine variant was the M3, a Buck Rogers experimental weapon, specifically for night defense. Its evolution began in 1945 and continued through the mid-1950s as a wide variety of large, unwieldy infrared night-sights, some looking like oscilloscopes or small T.V. screens, with heavy, detached battery packs, were added to the M2. Only about 2,100 were ever made: few were ever used in combat. All three M1, 2, and 3 variants were made by Winchester (836,680) and three times as many by Inland (2,626,807), but the folding stock M1A1 was only made by this latter outfit. WWII soldiers and Marines were very glad that GM was making carbines instead of Chevrolts. The other nine manufacturers only made the M1.

Half of all the WWII carbines were eventually given to postwar friends and allies. In 1946 we gave thousands to the French, who used them in Vietnam for eight years, then surrendered them to the Viet-minh, who later used them against Americans. Hundreds of thousands more were left in Korea for use by ROK troops after the 1953 ceasefire. And once American advisors in ever-increasing numbers began to frequent Vietnam, the little carbine was sent by the thousands to Southeast Asia as well. The justification was that a small, lightweight firearm was more suited to the average ARVN soldier than the much heavier, and more unwieldy Garand, or, after 1957, the M-14. Millions of carbines stayed in official U.S. armory stocks until 1957, when the M14 began to replace them. The carbine, however, was not obsolete but continued as an alternative small arm through the Vietnam War: one old friend, a former Navy Corpsman with the Marines, carried one as his personal weapon. Also beginning in the mid-1950s, we gave a great many .30 Cal Carbines to selected

Latin American governments. Thousands went not just to soldiers, but also to police. One recipient was Cuba’s Fulgencio Batista, whose guns unfortunately ended up with Fidelista communist guerillas after 1959. Che Guevara, for example, was frequently photographed with a .30 Cal Carbine, and in fact had one with him when he was finally captured, then executed, in Bolivia in 1967.

In the course of doing Central American archaeology for more than 40 years I have stared down the muzzles of quite a few .30 Cal Carbines while trying to establish my “bona fides” to soldiers, policemen, even complete strangers in civilian clothes. One episode from 30 years ago, now humorous in retrospect, sticks in my mind. After showing a friend of mine, a local government official, around my

archaeological site, I drove down the long, rocky road to my field camp, an old rubber plantation, where my students were busy working in my ceramics lab. My friend followed a short distance behind in his government truck, the national *escudo* blazoned on both doors. Emerging from the forest, I saw all of my Gringo students outside my building, “reaching for the sky” and facing a semicircle of Federal Police pointing eight or nine .30 Cal Carbines at them.

So I smiled, waved, and drove past everybody, circling the giant bamboo grove in front of my camp, until, obscured by the bamboo, I yanked my pistol from the glove box and frisbeed it out through my passenger-side window into the vegetation. Completing my 360-degree turn, I ended up bumper-to-kneecap with the commanding officer, just as my buddy pulled up alongside in his official truck, distracting all of the carbine-wielding Feds. Muzzles began to lower and expressions became embarrassed as the “mistaken identity” situation suddenly became crystal clear. Ten minutes later the C.O., inside my dining room, his hand wrapped around one of my beers, apologized profusely for the error which had led him and his force to “carbine up” on my terrified students.

If you have an M1 Carbine, the odds are about 50 percent that it was made by GM, only 25 per-

Like father, like son. The author with his trusty .30 Caliber U.S. Carbine, shooting at “defensive pistol distance” – 15 yards. All 10 rounds went where they were supposed to, completely obliterating the 1-inch diameter bullseye. Indeed, compared to any 9mm pistol, the .30 Cal U.S. Carbine is the most accurate home-defense “pistol” around.

cent by Winchester, and then the odds start dropping rapidly. Most carbine aficionados prefer the Rock-Ola guns, simply for the cachet of the name, knowing that they were made by a juke box manufacturer a decade before the birth of rock and roll. I bought my own National Postal Meter carbine around 30 years ago for two hundred bucks. It is one of 412,778 guns produced by that company, twice as many as made by Rock-Ola. It has a Type III "low wood," oval cut, stock of American Black Walnut. National Postal Meter made the receivers but not the barrels: my exceptionally accurate barrel was made in December 1943, by Buffalo Arms, a "Government Issue Free Barrel" supplied to NPM. Early Buffalo barrels were notorious for low quality, but later ones, including mine, were much better. All were stamped with their trademark ordnance flaming bomb. My carbine served in WWII, then in Korea, and then became a ROK weapon, until it was sent back to the US for sale as surplus.

In 1960 civilian manufacturers began making .30 Cal Carbine copies from scratch, or assembling them from odd-lot surplus parts. An estimated million of these civilian carbines have been made since then. In 1963, 175,000 surplus carbines were offered to NRA members at rock-bottom prices (\$17.50, plus \$2.50 for shipping and handling), renewing the American love affair with the little gun. The brand-new guns, made by more than two dozen different companies both in the U.S. and abroad, used to cost the same, but then much less, than the WWII and Korean War surplus guns. Unfortunately, many, if not most, of the new civilian carbines are not as well made as their military predecessors. As recently as 30 years ago you could "make your own" carbine from parts, although the result might end up costing more than an intact "low mileage" WWII gun bought surplus. Many supposedly "military" carbines floating around are actually reconstituted "mix and match" postwar guns assembled from parts. Now, more than 50 years after the first CMP surplus carbines came onto the market, they are still infrequently offered for sale by the Civilian Marksmanship Program, but at much higher prices. The last batch, in 2016, of Field Grade carbines went for \$625 while Service Grade guns brought \$685. The Civilian Marksmanship Program and the Carbine Collector's Club both have web pages, with information on production, serial numbers, parts, and carbine Q&A posted on line.

I am asked by an ever-increasing number of friends, neighbors, even total strangers, "What kind of pistol is best for home defense?" most often only after a 9mm semiauto has already been bought, and which the new owner has trouble operating, and cannot hit any target with. My answer, for the past 30 years has been, "The best home-defense pistol is a short-barreled 12 gauge pump shotgun." Then I explain the advantages in safety, reliability, and effectiveness of the scattergun over the pistol, especially in the hands of neophytes. Other folks tell me they have inherited some of their dad's, or even grandpa's, old guns but don't know what they are, or whether they are any good for home defense. Not infrequently, a WWII-vintage .30 Caliber U.S. Carbine turns up in Grandpa's attic, sometimes even with the original \$17.50 + \$2.50 receipt inside the gun case. I tell these lucky folks that the .30 Cal U.S. Carbine is another one of my all-time favorites as a home defense "pistol," way ahead of any handgun in the hands of anybody who does not shoot pistols on a regular basis. For home defense, the carbine beats the 9mm for safety, reliability, controllability, and accuracy every time: no surprise here, since the old gun is simply living up to its birthright and original function.

Is the .30 Carbine a long-distance hunting round? No, but it is a tried-and-true short-range man-stopper. The carbine is much harder hitting, vastly more accurate, safer, and more reliable in the hands of a nervous or inexperienced homeowner than any 9mm semi-automatic pistol. And, you can develop a handload for the .30 Carbine that greatly increases its stopping power. So, the function of the .30 Carbine today, just as at its birth in 1941, is not as a long-distance battle rifle, but as a more-reliable and much-more-accurate replacement for a pistol. Homeowners, especially in rural areas, should consider the trusty old M1 Carbine over any pistol for home defense. Unless you practice with a pistol on a weekly or at least a monthly basis, the chances of solving a home-invasion problem with it are pretty slim. If a bad guy is shooting at you with a handgun, and you return fire with an M1 Carbine, which more than six million American servicemen carried in three different wars, the odds of hitting your assailant with your very first shot are excellent. And, after all, in any confrontation between good and evil where guns are involved, that first shot is the one that counts most of all.

The author's National Postal Meter M1 Carbine. Made late in 1943, it was upgraded during the Korean War, and given the bayonet lug and adjustable rear sights. After service in WWII and the Korean War, it became a ROK weapon, then came back to America, and was sold as surplus.

New Designs From Kershaw Knives

Kershaw Knives and **Emerson Knives** have joined forces on a series of knives that combine the precision engineering of Kershaw with Emerson's uncompromising functional design.

The CQC-6K features a modified clip-point blade for versatile cutting ability. The blade has two finishes: a satin finish on the upper and a stonewashed finish on the grind. The handle's front scale of textured G-10 offers a secure grip and the handle's stainless steel back has a solid frame lock.

The CQC-6K is a manual opener using either the thumb disk or the patented Emerson "wave shaped feature." This opening feature enables the knife to be opened as it is removed from the pocket. The pocketclip is reversible for left- or right-handed carry.

Blade length: 3.25" Closed: 4.5" Open: 7.75"

N95-31320 \$54.99

Designed by Belarusian custom knifemaker Dmitry Sinkevich, the new **Kershaw Pub** looks like nothing you've ever seen.

Closed, you'd never know there was a handy blade inside – although you would definitely see the equally handy bottle opener. And if you were exceptionally sharp-eyed, you might notice the slotted screwdriver tip right next to the bottle opener.

To reveal the blade, just push down on what looks like the key ring attachment. You'll see the blade move out of the compact handle. Keep pushing and the blade will swing all the way out, ready for use. The blade is a modified sheepfoot with a straight edge and clipped rather than rounded tip. The handle has an anodized aluminum front scale in bright blue and a steel back.

Blade length: 1.6" Closed: 3.1" Open: 4.5"

84 Wise Company's "Grab & Go" Emergency Food Kits

Wise Company's **18 Wise Favorites 72-Hour Kit** includes six entrées and three breakfast meals, each individually packaged for a total of 18 servings (2 servings per pouch). Entrées include meat. Packages included have a shelf life of 7 years compared to those in our buckets with a shelf life of 25 years. Great for hunting, camping and hiking! Simple to prepare, just add boiling water directly into pouch.

Wise Company's **60 Serving Gourmet Entrée Only "Grab and Go" Food Kit** includes two servings per day (entrées only) for one adult for one month or four adults for one week. **Product within this Bucket is:** Savory Stroganoff (8 servings), Chili Macaroni (8 servings), Pasta Alfredo (8 servings), Creamy Pasta and Vegetable Rotini (8 servings), Cheesy Lasagna (4 servings), Teriyaki and Rice (8 servings), Creamy Ala King and Rice (8 servings), and Creamy Tomato Basil Soup (8 servings).

Wise Company's **60 Serving Gourmet Freeze Dried Meat "Grab & Go" Food Kit** includes 60 servings of assorted gourmet-seasoned freeze dried meat and a 20-serving bonus of long-term emergency rice, for a total of 80 servings. **Product within this Bucket is:** Roasted Chicken (12 servings), Teriyaki Style Chicken (8 servings), Cheesy Beef (8 servings), Southwest Style Chicken (12 servings), Savory Roasted Ground Beef (12 servings), Stroganoff Style Beef (8 servings), and Long-Term Instant Rice (20 servings).

Wise Company's **120 Serving Breakfast Only "Grab & Go" Food Kit** includes 120 servings of breakfast assortment (no entrées). **Product within this Bucket is:** Apple Cinnamon Cereal (40 Servings), Crunchy Granola (40 Servings), and Brown Sugar and Maple Multi-Grain (40 Servings).

Wise Company's **120 Serving Freeze Dried Vegetable and Sauce "Grab & Go" Food Kit** includes 120 servings of vegetable and sauce assortment. **Product within this Bucket is:** Corn (24 servings), Peas (16 servings), Broccoli (24 servings), Green Beans (24 servings), Butter Sauce (8 servings), Cream Sauce (8 servings), Cheese Sauce (8 servings), and Mushroom Sauce (8 Servings).

Wise Company's **120 Serving Freeze Dried Fruit and Snack "Grab & Go" Food Kit** includes 120 servings of fruit and snack assortment. **Product within this Bucket is:** Bananas (16 servings), Strawberries (16 servings), Peaches (16 servings), Apples (16 servings), Caramel Sauce (16 servings), Yogurt (16 servings), and Pudding (16 Servings).

Individual First Aid Kits From The Tactical Medic

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why we're offering individual first aid kits from The Tactical Medic. The Econo-IFAK contains a 4" Emergency Bandage, a TK-4 Combat Tourniquet, 1 Package of Rolled Gauze, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves. The Micro Kit #2 contains a 4" Pressure Bandage, 1 Package of Quick Clot Gauze, a TK-4 Combat Tourniquet, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves.
