Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$50.95 each.

We READ Our Mail!

Our sales manager, Gary Kieft, received the following letter at the 2018 NRA Annual Meeting in Dallas:

Gary,

On behalf of all the passionate men, women and youth who participate in the NRA's gun safety programs, hunter education courses, crime fighting initiatives, legislative advocacy and Friends of NRA gatherings – I want to thank you for leading the way in the Inaugural NRA 100K Challenge.

The NRA 100K Challenge boils down to one idea: don't underestimate the power of individual voices joining together to make an impact. Your participation in the NRA 100K Challenge encourages law abiding gun owners to stand tall and defend our freedom – without apology or compromise.

The voice of Dillon Precision Products emulates through the NRA 100K Challenge as it allows us to connect with with the people around the country – NRA members and non-members alike. Even those who don't participate or join during the Challenge will see our messaging and hopefully be encouraged to think about, learn about and talk about the NRA – and perhaps join with us down the road.

This powerful drive to restore our freedom – to restore our rights to protect ourselves and the people we love depends on your commitment and support. We are a little over 20 days into the challenge, with 80 days to go! If you can, please take to your social media platforms, website and digital correspondence each month until the end of July.

I am grateful for your steadfast commitment to the NRA, the NRA 100K Challenge and to safeguarding our freedom for generations to come.

Yours in Freedom,

Kara Kelly

Page 8

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W Long to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550C

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls for each ear
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

LESS

Bang For the Buck

By Peter Caroline

As a former advertising copywriter, I must admit to a sneaking admiration for well-crafted b.s. An excellent example thereof is Hiram Percy Maxim's coining of the term "silencer." Maxim came up with that descriptive term in 1909 when he patented both a firearms suppressor and an automotive muffler. If your only exposure to a firearms suppressor were through Hollywood gangster movies, you'd be under the impression that the sound of a silenced handgun (usually, God help us, a revolver) is "pffft." In real life, it's more of a "pop" or a subdued "bang." Silence is golden, but largely illusory. Hollywood's "silent but deadly" canard may in fact have influenced the government's decision in 1934 to include the silencer on the new NFA restricted list.

I first encountered an original Maxim Silencer many years ago. It came packaged in a printed cardboard tube with metal end caps. It had been fitted to an Ithaca Model 49 single-shot .22 rifle. When fired with standard-velocity .22 Shorts, it still made an audible "bang." Not loud enough to annoy one's neighbors, but still a disappointment to someone who had grown up exposed only to the Hollywood version.

Early in 2017, I had an opportunity to try out a modern silencer belonging to a shooting buddy. He had possessed the patience...and optimism...to buy a package deal Ruger .22/45 with a threaded barrel and a suppressor. He paid for the gun, and the \$200 federal tax stamp, and waited nearly a year, but it did finally arrive. After running several magazines full of standard-velocity .22 LR through the Ruger, we installed his suppressor on my Colt 1991A1, equipped with a Nelson Custom Guns .22 caliber conversion unit (nelsoncustomguns.com). Eley Club standard velocity Long Rifle worked very well indeed. CCI Quiet-22 and Gemtech Silencer Subsonic were even quieter, but required a lighter recoil spring in order to cycle the slide properly.

In June of 2017, I brought my .22-converted 1991A1 up to Shootists Holiday in Raton, NM, and tried it out with a suppressor made by John Killebrew, who owns and operates Killebrew Design & Manufacturing, LLC. This beautifully crafted unit is 6-1/2" long, 1" in diameter and features a standard 1/2" x 28 tpi thread. It retails at a

surprisingly reasonable price of \$275. I went to an unoccupied shooting area, where I wouldn't be distracted by other, unsuppressed, gunfire. It was a revelation. Using Eley Club ammo, I found the pistol functioned reliably, quietly and accurately. Although patience is not on my limited list of virtues, the decision was easy. When I got home from Raton, I sent off a check to John for one of his .22 silencers. John sent a Form 3 to the ATF and, just a month later, the silencer arrived at my local dealer's establishment. It came with detailed use and maintenance instructions plus what appeared to be a steel key ring inscribed with "KDM Rutledge, AL." As it turned out, this is actually a disassembly tool. I could examine my new silencer, but I couldn't take it home. I had to fill

out multiple copies of an ATF Form 4 and send it, along with a check for \$200 and an unflattering passport photo of myself, to the ATF. And wait.

That was on July 25, 2017. On January 17, 2018, I got a call from my local gun dealer. The ATF approval paperwork and tax stamp had arrived. I could now legally pick up my silencer. I did so, immediately. I had, at an earlier date, picked up a 16-ounce pressurized can of dB Suppressor Foam, which is formulated to further reduce the sound level of firearm suppressors, and to lubricate and protect the internal surfaces of the can. When I got home, I filled the silencer with foam, screwed it onto the threaded muzzle of the pistol, loaded the magazine with CCI standard velocity (1,070 fps) .22s, and went out on the back patio. It was indeed very quiet, even without ear protection. How

quiet? About 15 minutes after I came back in the house, my wife asked me, "When are you going to try out your new silencer?"

Shooting with a suppressor is a pleasure, and considerate to those around you. It could help protect you from hearing loss, although my hearing was compromised many years ago (thank you, Fort Dix). Definitely worth the wait.

Reloading Dies and Caliber
Conversions sold separately
(see the back of the order blank in
the center of *The Blue Press*).
Pictured with optional accessories:
Strong Mount 059-22051 \$50.95

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$26.45 each, or \$24.45 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

XL 650 (Balance Beam Scale)	059-21430	207.95
XL 650 (Electronic Scale)	059-22118	266.95

Dillon's Strong Mounts

increase your machine's "foot-print" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 650	059-22051	\$50.95
XL 650-only	059-22052	47.95
"SDB"	059-22223	66.95

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	059-22214	\$44.95
1050 Tray Kit	059-22215	44.95

Dillon's Toolholders are available for your RL 550, XL 650, SL 900, and Square Deal B, and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL 650 with Wrench Set	059-11555	\$30.95
XL 650 w/o Wrench Set	059-11554	19.95

One-Inch Bench Wrench	059-10842	7.95
Square-Deal-Only Wrench	059-19970	8.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

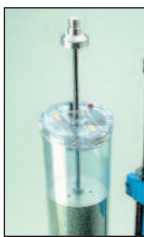

Magnum Powder System	059-97126	\$154.95
----------------------	------------------	-----------------

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	059-16306	\$42.95
--	------------------	----------------

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Aluminum Roller Handle	059-17950	\$47.95
------------------------	------------------	----------------

Quick-Change Cover for use with powder measure.

	059-11143	\$14.95
--	------------------	----------------

With Dillon's RL 450 Upgrade components, you can, either all at once or one assembly at a time, upgrade your RL 450 reloader to an RL 550!

Dillon's Case Preparation Equipment

CV-2001 059-20493 \$189.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

CV-750 059-19455 \$145.95

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To

CM-2000 Case/Media Separator 059-20675 \$76.95

CM-500 Case/Media Separator 059-21045 \$47.95

accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers: Case Cleaners are available in 220 volt!

Euro CV-2001 059-22047 \$214.95

Euro CV-750 059-19473 \$170.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners now have a **Five-Year Warranty** on the electric motor.

Rapid Polish

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run.

Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **O59-13804 \$8.95**
Case (20 pc.) **O59-20255 135.95**

Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **O59-13733 \$11.95**
Case (20 pc.) **O59-20256 168.00**

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) **O59-21375 \$135.95**

Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.
15-pound bag **O59-13287 \$23.95**

Ground corn cob polishing media – the best there is for that final polish.
10-pound bag **O59-13496 \$15.95**

Super 1050/RL 1050 Short Trim Die Toolhead

059-62219
\$229.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. *(NOTE: the Blue 1050 toolhead stand – Part Number 059-62200, \$49.95 – is not included.)*

Lyman Precision Funnel Set

Lyman's Precision Funnel Set is the ideal system for the serious reloader. The Precision Funnel Set is made to be completely static free, with a body of die-cast aluminum and precision-turned aluminum inserts. No more powder clinging to surfaces, which can happen with lightweight plastic funnels. The solid construction and quality of Lyman's Precision Funnel Set will be apparent in its first use. This is no "one size fits all" funnel; the Precision Funnel Set uses precision-machined, caliber-specific inserts to properly fit the case neck. The inserts can be quickly and easily installed by simply pushing them into place and then pulling them out when changing calibers. The Precision Funnel Set also comes with a padded storage case that neatly stores extra inserts when not in use. The set includes inserts for .22, .243/6mm, .25/6.5mm, .270/7mm, .30 and .338 caliber rifle cartridges.

059-11389 \$39.95

Lyman X-Block Gunsmith Bench Block

Having the right tool for the job makes any gunsmithing project so much easier! Without the right tool, you may damage fine finishes or break parts. The Lyman X-Block is the right tool for anyone driving pins out of firearms. It has all the features to get the job done smoothly and professionally. The X-Block has both a "V" slot and a rounded slot running across the face of the block to support a variety of barrels and slides. The block is made of a tough, non-marring polymer, and edged with a softer non-slip outer overmold. The block has multiple holes to take on most any project, as well as a molded-in magnet on the back side of the block to catch pins and other small parts as they drop out. Its large 5" diameter provides a stable base with plenty of support.

059-11390 \$15.95

Dillon's New Rapid Trim 1500 Case Trimmer ²³

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **O59-62164** is **\$332.95**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **O59-13141**, are **\$20.95** each. Upper lock rings, **O59-13559**, are **\$5.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

by Mitch Rosen!

When we lost our supplier for Dillon Leather, we considered abandoning the gunleather business. Fortunately, we were able to team up with Mitch Rosen Extraordinary Gunleather to continue to offer a best-quality, made-in-the-USA line of belts and holsters. We know you'll like these products – we're happy to have our name on them.

Dillon's Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access, has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle's "Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

Double Duty TDU®

Trainer

Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. *According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.*

Dillon's Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles. *Dimensions: 66" x 27.75"*

Mr. Bulletfeeder[®]

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

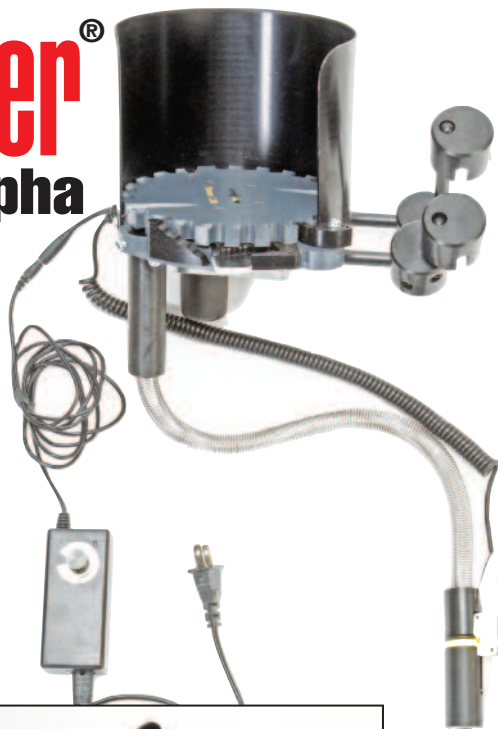

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Mr. Bulletfeeder[®] Replacement Parts & Spares

Having separate Bullet Dropper Dies allows you to quickly swap toolheads of the same caliber sizes without having to remove and readjust the bullet dropper die.

The Output Tube Assembly is what connects the Mr. Bulletfeeder by DAA's collator to the dropper. It feeds the bullets into the dropper, keeping them aligned and feeding smoothly. The Small Output Tube Assembly is required for the rifle calibers (both .223 and .308) as well as when loading very short, light 9mm bullets, such as many of the 90-grain bullets available. The Large Output Tube Assembly is required when loading 9mm (over 115-grain bullets), .40, or 45.

Lose a spacer? This four-pack of Nose Guide Spacers is identical to what comes with the Mr. Bulletfeeder. These are used to adjust the height of bullets, so they don't spill out or flip upside-down.

Dillon's Pistol Die Sets

Size Die

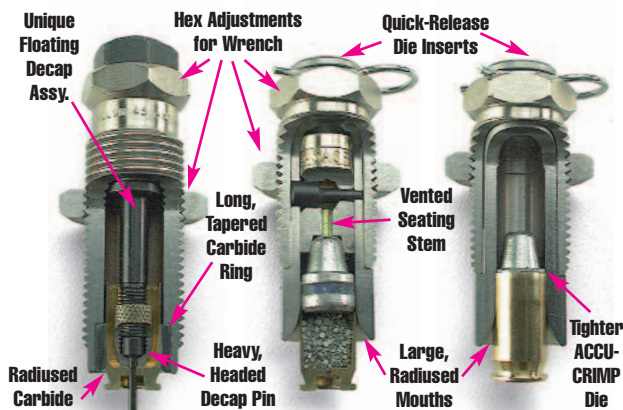

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the tool-head and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

Dillon's Rifle Die Sets

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a head-space case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Rifle Dies (Three-Die Sets)

By Barrett Tillman

Commercial semiautomatic-pistol-caliber carbines go way back. One of the first was the Marlin Camp Carbine, available in 9mm and .45 ACP, marketed from 1985 to 1999. Mine was .45 because it accepted 1911 pistol magazines. The Marlin had the advantage of appearing non-tactical with its wood stock.

Today's offerings include Hi-Point and Kel-Tec in the \$300 to \$500 range up to HK and CMMG for a Grover Cleveland bill – if you can find one.

Ruger's latest offering is the PC Carbine™, and perish-forbid that anybody misinterpret "PC" as politically correct. There is no such thing as a politically correct firearm, whether the social engineers will admit it or not. Some of them don't even want police to be armed with anything other than pepper spray. So let's put that topic to rest.

In Ruger's case, "PC" stands for Pistol Caliber, a 9mm carbine that should find a ready market for "civilians" as well as law enforcement. (Separate issue, but strictly speaking, police are civilians because they are not military.) The increasing popularity of police patrol rifles is bound to draw attention to the PC, especially in areas where .223 rifles may pose concerns about excess penetration – however warranted or unwarranted it may be.

The modular option for Ruger SR and GLOCK 9mm magazines is well conceived and easily exchanged with a hex-head wrench that comes with the adapter kit. But Ruger is missing a bet if it doesn't provide mag adapters for Smith & Wesson, Springfield, Beretta, FN, CZ, and perhaps Browning Hi-Power mags as well. If the factory does not follow through, some aftermarket entrepreneurs may fill the gap. Hey, it's called Capitalism....

Whoever the user, a 9mm carbine using popular pistol magazines has much to commend it. Depending on the pistol manufacturer, the

shooter could use his carry mags interchangeably with the long arm.

Inside the PC

The PC's action is essentially a blowback, with what Ruger calls a tungsten "dead blow" weight that shortens bolt travel and reduces perceived recoil.

The 16.5-inch, six-groove barrel is quality: cold hammer-forged of chrome-moly steel, fluted for weight reduction and (according to some enthusiasts) enhanced cooling surface. NRA tests showed that muzzle velocity increased a bit over 200 fps beyond the usual 9mm pistol figures.

Additionally, the forward half inch of the barrel is covered with a muzzle cap that unscrews to reveal threads "for standard muzzle accessories."

In today's political environment, some gun manufacturers are hinky about black. (In the 1990s I evaluated a superbly accurate foreign rifle with a black stock that the factory called "dark gray." Honest.) In any case, Ruger's black synthetic stock comes with three half-inch spacers that can be inserted at the butt to extend length of pull. Sling swivel studs are provided fore and aft.

The PC's standard overall length is 34 inches with 12.5 inches length of pull. Addition of optional spacers affects those figures, of course.

The forward end of the handguard is ribbed on the bottom as an accessory rail for a light or laser.

Ruger designed the PC with user friendliness in mind. The charging handle and magazine release can be reversed for southpaws. For the tactically inclined, a firing grip can be maintained with the dominant hand while the charging handle is manipulated with the support hand.

The takedown procedure is simple, being familiar to 10/22 owners. Lock the bolt back; ensure the chamber is empty; push a lever recessed in the forearm; and twist the assembly to pull the barrel free of the receiver. A knurled ring near the rear of the barrel allows shooters to compensate for any play in the tube.

RUGER®

PC Carbine

As shipped, the PC Carbine comes with the magazine release on the left side of the gun (above) and the charging handle on the right side (below). Both can be reversed to suit the owner's preference. The trigger, safety and bolt catch are nearly identical to the familiar Ruger 10/22 rifle.

(C.) Master lock

O59-13083, \$3.95

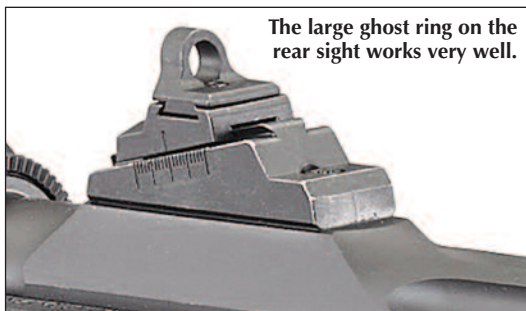

Takedown is simple: Lock the bolt open, push the takedown latch (inset photo) forward, twist the barrel/handguard assembly and pull it away from the receiver.

The front sight blade is well protected as are the threads on the muzzle.

The large ghost ring on the rear sight works very well.

Garand and M-14 shooters will find a familiar sight picture, as the PC mates a rear ghost ring with a protected blade front.

The trigger is excellent, a short take-up two-stage that lets off at about four pounds.

Officially weighing 6 pounds, 10 ounces, the carbine is well balanced and handles easily.

Range Report

Reliable figures are scarce, but available data shows that police rifle engagements occur at fairly short range. Most sniper shots run between 50 and 70 yards, and some patrol-rifle use is much closer. I'm acquainted with one operator who shot at 12 yards.

In urban areas, 30 yards gets you much of the known universe. Pace off the distance in a cross-walk to determine typical distances across major streets or down the block. For a precision shot against a partially concealed enemy, a carbine buys a lot of insurance.

So I fetched the PC and a satchel of ammo to The Range for accuracy tests and drills. Multiple groups were shot off an improvised rest at 25 and 50 yards, using four types of ammo, from 100 to 147 grains. At 25 yards all four printed ragged one-hole groups or cloverleaves. That included Federal BallistiClean indoor rounds.

The two best duty rounds at 25 yards were 147-grainers: Speer Gold Dot and American Eagle. Both were fairly consistent at 50, although by then a dodging 20-knot wind had brewed up, shaking the portable target stand. Both kept five rounds in about three inches with three Gold Dots approaching the NRA 50-yard tests that averaged

1.6 inches extreme spread. The BallistiClean also held three inches at 50 yards.

The PC's balance and easy handling showed best with 15-yard shots on an IPSC target's B zone (head) dimensions, averaging a tad over one second from low ready.

Reliability was nearly perfect using a 15-round GLOCK 19 magazine: one failure to eject with a 115-grainer. The immediate-action drill resulted in a double feed that was easily cleared by removing the mag and cycling the bolt.

Long-range plinking showed considerable potential. The reduced-size steel pig at 100 yards required some windage, but once the upwind hold-off was established, hits were relatively easy. Just for sport I tried the 200-yard ram, and my last round – holding on the tail – was a paint scraper barely off the chest.

So: what's the advantage of a pistol-caliber carbine over a handgun?

As we've noted, higher velocity with the same ammo, and greater accuracy over longer distances. Well-regulated pistoleros can score first-round hits at 100 yards because frequently a 25-yard zero offsets muzzle rise to put the round near point of aim at 100. ("Try at your own expense; your results may differ.") But the capability of a pistol-caliber carbine, and the confidence it generates, is well worth considering.

The PC lists at \$649 full pop but probably is available for less, perhaps considerably less.

CCW Tactical Shotshell Strippers⁴¹

California Competition Works' Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

Tandem Tactical Stripper **O59-00303** **\$55.00**

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device (C. & D.) that will accommodate up to a 2-1/4" duty belt.

- A. Six-Shell Tactical Stripper **O59-18606** **\$23.95**

CLASSIC FIREARMS: The He

By John Marshall

In September 1989, work began at Heckler & Koch in Germany on a new and extremely reliable semi-automatic pistol that could be adapted to any environment or need, and that would combine many useful features. The pistol's configuration was crafted under the able leadership of H&K designer Helmut Weldle, who had also been responsible for the novel P7 gas-retarded German service pistol. His newer design would successfully replace the P7 series in Germany, and would find wide acceptance worldwide. It was formally announced as the *Universelle Selbstladepistole*, the "Universal Self-loading Pistol," (USP) in January 1993, when it was first chambered in caliber .40 S&W.

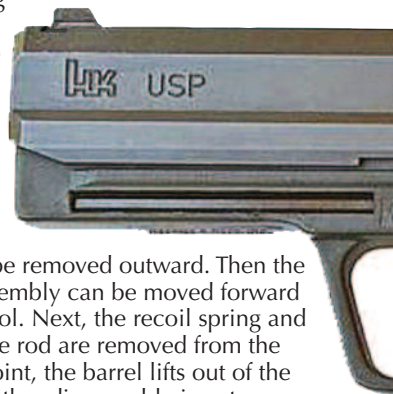

Heckler & Koch had pioneered the concept of a polymer frame for pistols with its groundbreaking VP 70 in 1970. The very talented Herr Weldle was involved with that design as well. Gaston Glock had of course famously taken the polymer-frame ball and run with it in the early 1980s. Knowing full well the lightweight and manufacturing advantages a polymer frame could provide, Weldle chose to further adapt it for easy versatility. He also purposely incorporated features that would be especially attractive to the U.S. market. The controls for the USP would be nearly identical in function and placement to those of the famed M1911 pistol, which had ruled the roost in America for many decades. Instead of being striker-fired like the GLOCK pistols, the USP was a traditional double-action/single-action pistol, favored by many experts for convenience, choice of readiness options and safety factors. With interchangeable modular components, this system could easily be adapted to provide an impressive number of variants.

The USP was offered in a 9x19 Parabellum chambering very soon after its .40 S&W debut, and in May 1995, a .45 ACP version was announced. The USP Compact series of pistols was established in 1996. It became available in a choice of chamberings – 9mm, .40 S&W, .45 ACP, and – exclusive to this compact pistol – .357 SIG.

The USP's mainstream model, especially popular in the United States, is what H&K calls its Variant 1. It can be carried "cocked and locked" exactly like the M1911 pistol, with the safety operating in the same place and in the same manner as the M1911. A nice improvement is that the operator can chamber a round with the safety on (up position). Also, pushing the safety down below the "off" detent activates a de-cocking mechanism that allows the hammer to be lowered safely without pressing the trigger. With the safety on or off, the USP can be carried with the hammer down in dou-

ble-action mode. Variant 2 is exactly the same arrangement, but with the safety lever on the right side for the convenience of left-handed operators.

The slide stop lever operates exactly as the one on M1911 pistols, but is extended farther to the rear for ease of operation. Fieldstripping is initiated by withdrawing the slide of the empty pistol so the notch in the left side of the slide is directly over the pivot point of the slide stop. The slide stop can then be removed outward. Then the slide/barrel assembly can be moved forward and off the pistol. Next, the recoil spring and the spring guide rod are removed from the slide. At this point, the barrel lifts out of the slide easily. Further disassembly is not recom-

mended. Lubrication needed for proper operation of the pistol is minimal.

This is a very easy pistol to strip and maintain.

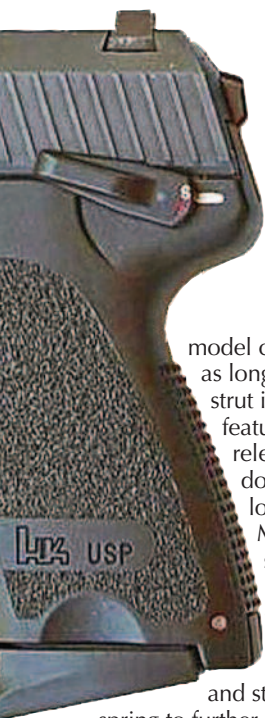

Illustrated here are two Variant 1 pistols in both full-size and compact forms. Each of these is chambered for .45 ACP. The larger standard pistol has a double-stack magazine holding 12 rounds. The compact's magazine holds 8 rounds in a semi-double-stack column. This slimmer magazine is made especially for the relatively short and thin grip frame. Full-size USP magazines will not fit.

The compact pistol's hammer is bobbed for snag-free drawing from under clothing, but it can still be manually cocked. Doing this requires that the safety be engaged, the pistol pointed in a

"Instead of being striker-fired, the USP was a traditional double

Heckler & Koch USP Pistols

safe direction, and the trigger pulled (which raises the hammer only to approximately half cock). Then the thumb can be placed in front of the hammer face to retract the hammer to full cock. This leaves the pistol in the cocked and locked mode. If desired, the spurred hammer from the full-size

model can be custom-substituted as long as the shorter hammer strut is retained. All USP pistols feature ambidextrous magazine-release levers. These require downward pressure, and are located near to the standard M1911 position. The recoil spring is carefully designed to provide way lessened slide impact on the polymer frame, and the compact version has a short and stout polymer sleeve over the spring to further absorb recoil forces.

I won't go into all the variants available and their designs, but the modular design of the

ed like the GLOCK pistols, the
-action/single-action pistol.”

pistol allows de-cocker only (no safety function), double-action only with a safety lever, double-action only with no safety lever, double/single action with safety only (no de-cocking function). Safety levers can be on either side. A special LEM (Law Enforcement Modification) provides a double-action-only pistol with a greatly lessened pull weight, a shortened trigger re-set, and no safety/de-cocking lever.

Alternate versions of the USP include the USP Tactical, USP Compact Tactical, USP Expert, USP Match, USP Custom Sport, and USP Elite. These are special-purpose modifications; the first two will accept sound suppressors. All USP models feature an under-barrel accessory rail designed for use with special H&K tactical lights. Adaptors are commercially available that can provide a standard Picatinny rail for other widely available options.

The USP was given very extensive testing during its development, right alongside the U.S. Special Forces' Mk 23 Mod 0 SOCOM pistol, which is essentially a USP pistol on steroids. It therefore became not only very easy to operate, but also quite accurate and extremely reliable. The barrel features an integral feed ramp, allowing very high-pressure cartridges to be handled with lessened risk of a case blowout. Barrel/slide locking and unlocking are achieved through a cam similar to that used on the Browning High Power pistol and others, with the chamber block acting as the interlock with the slide. USPs have endured repeated firing with no component failures after approximately 20,000 rounds during testing. Most of its parts are corrosion resistant, and German divers have used it extensively with no problems.

The USP was adopted with only minor changes by the German armed forces as the (9mm) P8 pistol. The P8's safety operates differently, in that "up" is fire, and "down" is safe. The "F" and "S" markings are on the frame rather than the safety lever. It also has a special translucent magazine. While the standard USPs have polygonal rifling (jacketed bullets only are recommended to prevent fouling), the P8 has traditional lands and grooves.

The USP has seen use by various organizations in approximately 22 nations, and has found great popularity in the U.S. with both individuals and a number of government agencies. It truly is a universal design that can be adapted to virtually any perceived military, police or civilian need. It's totally reliable, lightweight, ergonomic and accurate – a modern classic handgun that deserves high praise. A great number of those whose jobs require them to go in harm's way unhesitatingly rely on USP pistols.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

O59-21894 \$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

How I Became a Handloader ⁴⁷

By **Connie Bowlby**

I have been participating with (ASI) Action Shooting International for almost two years now and have been asked many times, "When are you going to start reloading your own ammo?" My answer has always been no, for many reasons. First of all, I didn't believe I was capable. Mostly because I still consider myself a newbie without enough experience yet to tackle reloading. I didn't grow up shooting. I mistakenly thought that people who reload learned to do so over a lifetime around shooting along with mentoring by a relative.

Secondly, I assumed it was too expensive and that I needed a room full of equipment. Preferably located in a garage or basement to make it safe. None of these fit my situation.

This all started when Dillon Precision offered me their handgun-caliber reloader, the Square Deal "B," in payment for my first article in *The Blue Press*. Of course, my "no" quickly turned to a YES! I learned that the process is a lot less complicated than I originally thought and with a little planning and research anyone can do it.

While I impatiently waited for my Square Deal "B" to arrive, I got curious and started asking questions. Every match I attend has many seasoned shooters with a wealth of knowledge. I discovered many reasons about why my fellow shooters choose to reload, including cost and recoil control. With the help of a friend and fellow shooter, I could see the cost savings by ordering in bulk. Slowly, I started ordering the ingredients for my 9mm recipe. Because packages can go missing in my neighborhood, I had everything delivered to a friends' house in Kirkland [Washington]. They laughed as they saw me on their Nest camera trying to get 4000 round-nose FMJ bullets into the back of my car from their front porch. The box weighed almost as much as me! I began picking up spent brass at the indoor range. My spare bedroom is now "the gunroom."

Finally, after the holidays were over, feeling like Santa had forgotten me, my reloader arrived. I was a bit intimidated when I opened all the boxes to see very mechanical and technical looking equipment. After reading the instructions, I started to believe I just might be able to do this. It was suggested to me by at least three people that I get the Dillon Precision Strong Mount to attach the reloader to my bench. I am so glad I did. The quality of the Strong Mount is impressive and it allowed me to have the machine mounted higher on the bench without making any cuts in the front of the bench. My bench could then be built at the

perfect height for me to reload ergonomically. As a dental hygienist, I don't want to further stress my body while I am reloading.

The instructions were concise and easy to follow. I believe it helps to be curious about how things work. I always have been. The more I learn about the technical aspect of my sport, the safer and more confident I feel. Assembling the Square Deal "B" myself really helped my understanding of the reloading process.

One of the many great things about the Square Deal "B" is the dies come preset from the factory for the caliber you need. You can reload all the common handgun calibers but not rifle calibers. It was the perfect choice for me as I only shoot 9mm. You can make several adjustments to change the end result. These include increasing or decreasing the powder charge, adjusting the amount of the bell, changing bullet seating depth and setting the amount of crimp. I only had to slightly adjust two measurements. I worked out the correct powder charge and the depth the bullet was being seated into the shell case. After that I was off and making rounds!

There is something very satisfying about taking 50 rounds you just made yourself to the range and firing them in your favorite pistol. I tested the first rounds in all my pistols and had no malfunctions or feed issues. Next, I reloaded in batches of 20 rounds going down in the amount of grains of powder to find the sweet spot for my GLOCK 34. With the help of a friend's chronograph, I tested several batches for speed and to make sure my gun would cycle.

The moment of truth came on the next Thursday evening at Wades Eastside Gun Range [Bellevue, Washington wadesguns.com] for the ASI match. I was ready with 100 rounds of my new ammo "hot off the press." Every round worked and I could feel a little less recoil. I finished in seventh place out of 29 shooters with a raw time of just over 47 seconds for four stages. This is one of my best times to date. I am very excited and pleased with the results I was able to achieve. I expect this ammo to help me continue to be more competitive and have more-accurate follow up shots with reduced recoil. Buying all the reloading components in bulk will help me cut my cost almost in half as compared to what I was paying for factory-loaded 9mm ammo.

I hope this helps anyone who is thinking about reloading. With a bit of prep work and some research anyone can reload safely. Please read all instructions and wear your eye and ear protection while reloading. Happy Shooting!

Making A Dope Card

By Oleg Volk

Once upon a time, starting in the early 1500s, gunsmiths started making range-adjustable sights for rifles. At first, they used multiple rear sight leaves, each taller than the one before. By the mid-1850s, sliders on graduated vertical frames appeared, then vernier sights and slider-adjustable v-notches. The first scopes with simple crosshairs made of wire or spider silk were throwbacks to the earliest, single-distance open sights. With the introduction of etched reticles, integral range-compensating features finally became available in scopes.

The first reticle-based drop compensators were pre-calculated to specific combinations of rifles and cartridges, such as the SVD marksman rifle and heavy match ammunition. Ranging brackets permitted range estimation based on the height of a human target. On the US side, most of the Trijicon ACOG line has a simple and effective “tree” of crosshairs marked with ranges from 100 to 600 meters, each horizontal line matching the torso width at that distance. All these pre-calculated solutions are valid only for very specific combinations of rifles, cartridges and atmospheric conditions. For non-institutional shooters using a much wider variety of equipment, graduated reticles are made in milradians (mildots) and minutes of angle (MOA).

At first glance, these reticles are very uninformative, telling neither where to zero them nor how to adjust for drop. Looking more closely, this lack of specific constraints becomes their main

strength – adaptability to any conditions. It’s possible to use the data on the ammo box or to use a ballistic calculator to estimate drop for your firearm. Absent the ability to confirm at the range, those numbers would get you close. However, the best way to actually make the dope chart is to shoot the gun at all distances of interest and record that information.

For this example, we will fire an accurate 5.56mm rifle with a 20-inch barrel, rested solidly on a support. Let’s say we’ve fired it for groups and found that 69-grain match ammunition yields the best groups around 1 MOA. Using a scope with a MOA reticle, we zoom all the way in and zero it at 200 yards. Most scopes that do not feature zooming reticles (front focal plane) only give accurate angular measurements at full zoom. We would have to fire several shots to confirm zero because the results aren’t a single hole at the exact point of aim, but an approximately 2-inch cluster centered around it.

Since zeroing and drop compensation involve a lot of numbers, we should write everything down for future reference. You might have several rifles, or yours might be loaned out to friends who should know the settings. So we note a “200 yard zero” which, with the standard 2.6-inch elevation of AR15 sights over the bore line, also means a close zero of about 50 yards. The 200-yard zero was picked because 5.56 x 45mm is a fairly flat shooting cartridge, and the highest mid-range trajectory is negligible at 1.45 inch. With the zero set, we

can start moving the same exact paper target – make it a very large one – farther and farther back. Do not change the point of aim, and do shoot multiple rounds at every distance to make it easier to determine the center of every shot cluster.

At 300 yards, the drop is non-negligible at over 7.5 inches from the 200-yard mark. The cluster of holes would be around 3 inches in diameter, so long as we shoot carefully. At 400 yards, the drop is over 23 inches. At 500, nearly 50 inches – a shot aimed at the upper chest of a standing foe would drop at his feet. At 600 yards, the longest distance at which we will shoot for data, the drop from zero approaches 90 inches – that’s more than the full height of an adult human. At that range, our bullets remain supersonic, so the 1-MOA dispersion should hold and amount to half a foot. Keep in mind that the numbers provided come from a ballistic calculator and could easily differ one way or another depending on the bullet shape, altitude, humidity and other factors.

Once we have our shot groups, let’s measure the distances of shot clusters from the bullseye and convert inches into angular measurements. For example, the 50 inches of drop at 500 yards amounts roughly to 10 MOA of holdover. Mark that on the dope card. To make things simpler under field conditions, print out a picture of the reticle and caption the number of hash marks corresponding to 10 MOA with a legend “500 yards.” Do the same for all other distances, then laminate the data sheet to your stock.

You can even make dope charts for scopes or red dots that lack ranging/drop-compensating reticles. For example, if you have a red dot with a 2 MOA reticle, it’s quite difficult to compare the glowing dot to objects downrange. However, you can make a reminder chart indicating the drop from zero in inches. With a 100-yard zero, the 200-yard point of aim would be so close as to make deliberate compensation unnecessary, other than placing the dot above the bullseye rather than on it. At 300, the drop would be around 11 inches. With a typical head height being 9 to 10 inches, we can take a head in a helmet as 11 and simply adjust the aim up by the space of one head – so aiming for the center of the face would get a chest hit. At 400, the drop would be around 28 inches, or over 1/3 of a typical man’s height – so put the dot slightly above the head for a torso hit. At that distance, the 2-MOA dot would cover 8 inches, almost the size of the head itself, allowing verification of range estimation. Again, this data may be added to the stock as alphanumeric notes or as a body diagram with distances marked.

Even with the same rifle and ammunition, most people will find that their personal zero isn’t the same as for others. The best way to make the dope card is to shoot your own rifle with your favorite ammunition – not always with the most accurate, but rather with the kind you would use for hunting or defense. Once you have the drops figured out, the hard part begins: figuring out adjustments for wind, humidity and other environmental factors. **P**

"Big Fifty Reloader"

STANDARD FEATURES:

- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2"-12 UNF Thread Dies
- Manual Shellplate indexing
- Average Loading Rate: 300 Rds./Hr.
- Loads High Volume/Match-Grade Ammo
- Milspec/Match-Grade Priming System
- Ductile Iron/Carbon Steel Construction

Dillon's Bench Wrench Fits 1" Die Lock Rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to

re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Elzetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

HOW TO AVOID 1911

By Duane Thomas

There is a word I love: labile. I first heard it during a phone conversation with USPSA Grand Master and famous pistolsmith Bruce Gray. So, of course, I played it off like I knew what he was talking about, then as soon as we hung up, I rushed to the dictionary to discover the meaning of this wonderful new word. “Labile” means “prone to degradation” or “vulnerable to change in a negative sense.” Sadly, the magazine for the singlestack 1911 .45 has proven, historically, to be a fairly labile part of the system, vulnerable to the phenomenon called “lips spread.” In this article we’ll discuss what that is, why it’s bad, and how to avoid it.

WHY IT HAPPENS

There was a time that the emphasis in reloading practice was to reload an autopistol before it ran dry. The theory being one of the great advantages of the autoloader over the revolver was you didn’t have to open up the gun and disable it in order to reload, you could keep a round in the chamber while reloading, thus the gun would still be fireable in case you got rushed during the reloading process. Tactical doctrine is downstream from competition, and that’s how it was done in IPSC (which in the United States eventually became USPSA), and still is.

Eventually – and this took decades – we noticed there had never been a single instance of a person needing to fire a chambered round out of an autopistol while being charged during a speed-

load, and some people started asking, “Why am I dumping perfectly good ammo out of the gun in the middle of a fight, when I could be using it to fight with?” In recent years, because of the popularity of IDPA, which has been perceived by many as more “real world” than IPSC/USPSA, and in which the slide forward speedload is outlawed, the doctrine has changed to firing the gun until it’s completely empty, then reloading from slidelock.

I’m not here to discuss the virtues and vices of the slide-forward speedload versus the slidelock reload. For our purposes here it’s worth noting, however, that doing a slidelock reload is much harder on magazine feed lips than doing a slide forward speedload. When doing a slide-forward speedload, upward movement of the cartridges in the magazine is retarded when the top cartridge butts up against the underside of the slide. With the slide locked to the rear, by contrast, the cartridges “bounce” in the magazine, and the top cartridge batters the feed lips, which eventually spread.

WHY IT’S BAD

With use, especially if you practice a lot of slidelock reloads, over time singlestack 1911 magazine feed lips spread. Eventually you wind up experiencing a very bad, very distinctive malfunction: you fire the chambered cartridge, the next round in the magazine “floats” halfway up THROUGH the feed lips, and you wind up with the cartridge held in a vice, pinched between the feed lips at its widest point, and the slide held

.45 MAG LIPS SPREAD ⁶³

back by the breech face butting up against that unmoving cartridge. This is a horrible malfunction because a tap-rack-bang drill won't fix it. You have to manually lock the slide to the rear to relieve forward pressure on that stuck cartridge which is pinning the magazine in the gun, remove that magazine, and insert a new mag then drop the slide, before you can get the gun back up and running again. This takes time you might not have in a fight. As John Farnam has commented, "Losers in gunfights don't generally run out of ammo, they run out of seconds."

The Smith & Wesson Model 39 was notorious for this, once you got some real wear on the magazines, but by far the weapon to experience it mostly commonly has been the 1911. Mostly because it's a very popular gun. This is particularly common in .45s, because of the weight of those big, heavy cartridges pounding the feed lips. The problem gets worse with the extra-capacity 8-rounders, and worse still with the extended 10-rounders.

HOW TO AVOID IT

The easy answer to this problem is to monitor your magazines' feed lips dimensions with a dial caliper, and when they get to a certain point, cease using that magazine. So, what is the maximum acceptable feed lips width for a singlestack 1911 .45 magazine? Why, I'm glad you asked! This is a topic on which you will find no information on the Internet. None. I know, I checked. On the other hand, if you're me, of course that means you just call up the magazine makers and ask. They'll be happy to tell you. At least they were me.

Let's begin by recognizing there are, basically, two types of 1911 .45 magazine feed lips configurations, "hardball feed lips" where the feed lips travel away from each other at an angle, and "semi-wadcutter feed lips" where they travel parallel to each other then open up. Hardball feed lips were the original design, and as the name would indicate, do not work well with semi-wadcutters or hollowpoints. By contrast, semi-wadcutter feed lips can work well with hardball, semi-wadcutters and hollowpoints. For this reason, unless we're talking a repro mag, magazine makers these days produce singlestack 1911 .45 magazines with semi-wadcutter feed lips. This is good for another reason: having the feed lips parallel to each other makes it easy to measure their width.

A brand-new singlestack 1911 .45 magazine – granted there can be variance from maker to maker, and magazine to magazine – will typically have feed lips with a width somewhere in the high .37-something inch to low .38-something inch range. I have found .378" to be fairly common. Over time, as the feed lips spread, you're still good with anything in the .38-something to .39-some-

thing-inch range. I will not use a 1911 .45 magazine once the feed lips dimensions spread to .400" or above. Although I developed this rule myself, I have had it verified by the folks at Chip McCormick Corporation this is a good approach. Even though, at .400" the magazine will still work, at this point the metal has become fatigued, the feed lips are spreading, and serious problems are just around the bend if we continue using that magazine.

Exception: feed lips on the new CMC rail mags (see Page 69) tend .400-ish, which might lead one to think trouble is imminent. Not so. The CMC rail mags' reinforced feed lips mean that, although the cartridge still presents and feeds like a conventional magazine, the area of the feed lips that actually touches the cartridge is farther down inside the tube. Even though the very top of the tube, what we would normally think of as the feed lips, is wider than on the typical new 1911 .45 mag, that doesn't really signify with the new design.

According to CMC, in their testing the reinforced feed lips never spread. Even when deliberately abusing a 10-round magazine by slamming it, fully loaded, into a slidelocked autopistol, as hard as possible, over and over again until the mag tube *per se* spread to the point the magazine wouldn't even fall out of the gun when they punched the mag release button, the feed lips dimensions stayed the same and the magazine still fed perfectly.

Not saying I'm going to dump the dozens of singlestack 1911 .45 magazines I already own, and re-equip with nothing but CMC rail mags. Honestly, if you only run 7- or 8-shot magazines, and monitor the feed lips dimensions, you should never have a problem. Having said that, I will also say if I were in the market for 10-round 1911 .45 magazines, I'd be looking hard at CMC rail mags.

SUMMARY

With conventional magazines, you can't really avoid 1911 .45 magazine feed lips spread. For whatever reason, and in my experience it's not a "this maker is better than other makers" situation, it's more "this individual magazine just happens to last forever," certain individual magazines do seem to avoid lips spread...well...forever. I have 1911 .45 magazines I've been using for 20 years, and their feed lips dimensions are still well within usable limits. Then I've had other magazines where the feed lips have spread beyond acceptable limits with much less use. But, having reading this article, now you know how to monitor this situation yourself, and avoid it becoming a real problem. Because it really sucks when your 1911 .45 that never malfunctions suddenly malfunctions, badly.

Extra Loading Data Labels, O59-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL650 cartridge bins are 6-3/4" long x 3-

7/16" wide x 2-13/16" deep.

- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Swab-its – A Swab for Every Job! ⁶⁵

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that “whisky-tango-foxtrot” look on his face. “Hi,” I said (*thinking fast*), “I’m trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!” The **Bore-tips Swabs** REALLY DO work. What you can’t see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

66 New Products from Slip 2000

725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks!

NOTE: To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. 059-19237 \$19.95

Slip 2000 Carbon Killer provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact.

NOTE: Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

16 Oz. 059-19234 \$19.95

Slip 2000's Extreme Cleaning System contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

059-11652 \$22.95

Slip 2000's AR Cleaning System contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

059-11676 \$18.95

Slip 2000 Extreme Weapons Lubricant (EWL) was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. 059-11644 \$16.95

Slip 2000 EWL30 has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. 059-11645 \$19.95

Slip 2000 Copper Cutter is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing!

NOTE: It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. 059-11646 \$10.95

Each Slip 2000 Gun Wipe packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube.

Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack 059-11674 \$11.95

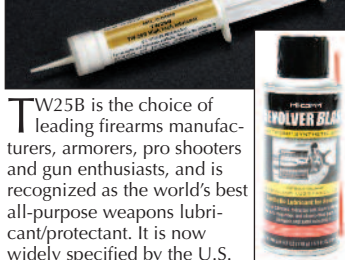

Lyman Pick & Brush Set

Lyman's Pick & Brush Set is an indispensable item for your cleaning supplies and range bag.

059-40160 \$3.99

MIL-COMM Extreme Performance Lubricants

TW25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

0.5 Oz. Syringe 059-15732 \$10.99

1.5 Ounces 059-15731 14.50

Revolver BLAST with TW25B is an all-synthetic lubricant/protectant specifically designed for revolvers.

4.2 Oz. Aerosol 059-66677 \$11.95

E-Z Brite Wonder Cloth

On gun dealers shelves since 1976, this product is still a must for keeping stainless steel and nickel-finished revolvers looking like new. Demand the original lead and carbon wipe!

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is for use in warm weather (F60⁺), Lite is a thinner viscosity for lower temperatures (F30⁺).
 Slide-Glide Standard **059-15571** **\$7.95**
 Slide-Glide Lite **059-15572** **7.95**

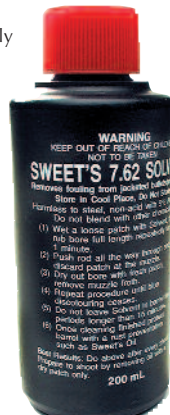

Microlon UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

059-75125 **\$9.95**

Sweet's Australian 7.62 Solvent

easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

70 ELITE TACTICAL SYSTEMS MAGS & LOADERS

Elite Tactical Systems' C.A.M. Rifle Magazine Loader loads AR15, AK47, AK74, FN SCAR-16/17, AR10, G36, Steyr AUG, MP5, CZ Scorpion EVO, Colt SMG, UZI and more in 5.56x45/.223, 7.62x51/.308, 7.62x39, .300BLK, 5.45x39, 9mm and more.

The ETS C.A.M. Pistol Magazine Loader loads most 9mm or .40 caliber pistol magazines – including single stacks. It doesn't force rounds through the feed lips, so it won't damage magazines.

Both ETS C.A.M. magazine loaders will lift up to 10 rounds of ammo directly from an ammo tray!

ETS 30-round AR magazines have a built-in coupler that allows multiple magazines to be connected in seconds with no tools. Clip-on dust covers keep dirt and debris out during storage.

ETS magazines for GLOCK® pistols are compatible with aftermarket floorplates for GLOCK magazines, feature

special grip ribs on the floorplate to aid in extraction and are easy to disassemble for cleaning and maintenance.

Made in USA With a Lifetime Warranty!

74 "The Perfect Small Parts Cleaning Accessory"

059-10209 \$15.95

The HYSKORE Degreezer consists of a 12" x 6" x 4-1/2" polypropylene tray with an angled drainage surface and a well with a perforated basket for holding and draining small parts. The set also includes a standard double-end nylon gun-cleaning brush. As anyone who has cleaned a gun is aware, cleaning small parts is a major challenge. Given the available technology and fixtures, the standard procedure is to use some kind of cup or similar vessel, pour in a quantity of cleaning solvent, and then pick up the parts one by one and brush them clean. The Degreezer changes all of that. Small parts and even complete trigger groups and bolt assemblies can be placed in the basket and the well filled with solvent to cover the parts and left to soak for extended periods. Then the basket can be withdrawn, draining all the parts. As a bonus, the set includes a cover with an integral holder for the brush. This means the solvent that has been contaminated by the cleaning process can be left in the well of the Degreezer (rather than returned to the bottle) with the cover in place so that it's ready to be used for the next cleaning event. The tray, cover, and basket are made from polypropylene plastic. This has been proven to be impervious to all popular commercial cleaning solutions. It will also resist kerosene, acetone, and gasoline. The Degreezer will quickly become an indispensable fixture on your workbench.

HYSKORE Six-Gun Modular Pistol Rack

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The rest will hold six pistols with either single-stack or double-stack magazines, and can be disassembled and reconfigured to hold guns with wider or narrower grips. The modular feature of the rest also means that two or more rests can be connected together and reconfigured not only to give each gun its own "special home," but also to take maximum advantage of all available space in your safe or vault. This is easy to do using 3/16" threaded rod, washers, and hex nuts available from any home-improvement store. The rack measures 11-1/4" wide x 7-1/2" deep x 6" high.

059-10208 \$19.99

5.11 Tactical All Hazards Ammo Mule

Sometimes, you just need more ammo. The All Hazards Ammo Mule is light-weight, durable and weather resistant. It features a secure wraparound zipper with a molded pull and measures 10.12" wide x 3.88" deep x 8" high. It'll hold 10 5.56 AR mags or six 25-rd. boxes of shotgun shells.

059-19661 \$27.99

OPSol Mini-Clip™

Allows the use of 12 Ga. 1.75" Birdshot, Buckshot and Slug shells. Fits 12 Ga. Mossberg 500, 590, 590A1 and Maverick 88 models

The OPSol Mini-Clip™ was designed to give "well seasoned" and "recoil sensitive" shooters the capability of shooting the trusty Mossberg 12 Ga. platform without the usual recoil response. By using The OPSol Mini-Clip™ in conjunction with 1.75" shotgun shells, shooters stay in the game without all of the pain. The Mini-Clip enables owners of Mossberg 12 Ga. shotguns to use Aguila Minishells reliably for training, practice, recreational or home-defense applications.

TRS-25 with riser **O59-31318 \$119.95**

Scout Scope Mounts for AK, SKS Rifles

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle **O59-25374 \$79.99**
Scout Scope Mount for SKS Rifle **O59-25373 78.99**

The Ruger 44 Carbine, Ruger's

Above: At a glance it's very hard to tell the difference between the Ruger 44 Carbine and today's 10/22. Center: The tubular magazine holds four rounds and loads just like the Remington 1100 shotgun. Right: This 1964 model has an adjustable rear peep sight. Adjustable for windage and elevation, this sighting system is fast in the brushy north woods.

By Chris Cerino

Growing up and living in Ohio all my life, I'd been subject to deer-hunting laws that didn't leave a lot of room for variety in the realm of gun hunting. Until recently, Ohio hunters have had little choice but to hunt with single-projectile shotguns, muzzleloaders or handguns of specified calibers and barrel length during gun season. Don't get me wrong, single-projectile shotguns are accurate and you can build a nice shotgun for deer, but they get heavy and you're still limited to those heavy-recoiling slugs. If you're a handloader for hunting and performance, you'd need to be a serious wild-catter to load precision slugs. All these choices can do the job, but rifle-hunting states have so many more options and opportunities for hunters to customize their guns.

As a young man I came across what looked like a Ruger 10/22 Carbine – that fired the .44 Magnum. How could this be? One of my favorite guns – the Ruger 10/22 – but in a .44 Magnum! The gun looks and feels just like a 10/22 until you realize that the muzzle is huge. As it turned out, it wasn't a 10/22. It was the Ruger 44 Carbine and it was the predecessor to the 10/22. It was love at first sight. When I hand one to a friend they question my excitement about the common-looking .22 until realizing that it's anything but.

Instantly falling in love, I dreamt of a day when Ohio might see fit to legalize pistol-caliber rifles for deer hunting. The idea of having a .44 Magnum in rifle platform really excited me. Oh, the options we would have if we could use pistol-caliber rifles! Lighter, more accurate and with the opportunity to handload to best optimize performance.

In 2014 Ohio made the decision to allow hunting deer with rifles that fired straight-wall pistol cartridges. The .44 Magnum was on the list of

allowable cartridges. That decision opened a whole new market for gun sales in the state and people flocked to the stores and auction sites.

Immediately I began a fevered search for my holy grail for fear that people in Ohio would snatch up the few out there. Through a bizarre twist of fate, I ended up being in possession of not one, but two of these classics. Online auction sites and an itchy bidding finger were to blame. Research, trigger time, and the inevitable disassembly and cleaning taught me a lot more about this old classic.

Ruger began work on the 44 Carbine in 1959. Specifically designed as a tight woods, short-range carbine to hunt and stalk deer, Ruger named the new creation the "Deerstalker." It was 1961 before the carbine was brought to market. It wasn't long before Ithaca Gun Company detected a conflict with the "Deerstalker" name and brought suit on Ruger. Without much ado, Ruger quickly changed the name to the 44 Carbine. The name, although lackluster, remained until 1985 when the gun went out of production.

The carbine was created from the ground up to handle the powerful .44 Magnum cartridge. To beef the gun up, Ruger opted for a solid walnut stock and a solid, machined-steel receiver. The semiauto receiver fully encloses the bolt, leaving a side ejection port where the short charging handle is easily accessible on the right side. The carbine loads in shotgun fashion and has a tubular magazine and lifter system reminiscent of the Remington 1100. The magazine holds four rounds for a maximum load of five rounds with one chambered. The recognizable barrel band of the 10/22 actually works in conjunction with a rear lug to hold the barreled action in the stock. Remove the band; pull the charging handle back about 1/4 inch and rock the action up and out.

Original "Pistol Caliber Carbine"

Above: The solid walnut stock shows its age but also accents its beauty. The 44 Carbine's controls are all identical to any off the shelf 10/22. The Ruger 44 Carbine doesn't "resemble the 10/22" because it was created first.

The 10/22 actually resembles the 44 Carbine.

Right: An online search found these 44-Carbine-specific scope mounts and period optic. It's great looking and a perfect accent to this 1980 model.

To fire the most powerful pistol cartridge in the world at that time, Ruger created a 3-lug locking bolt design to go along with the solid steel receiver. Not short on pressure or gas, a short-stroke piston is used to operate the action. Bleeding gas off the barrel, the piston pushes an action carriage to the rear causing a camming action to unlock the bolt.

It's a real fire breather, but recoil isn't bad considering the heavy load. Removing the action from the stock finds a recoil spring that wraps around the magazine tube. This recoil spring tames recoil and brings the gun back into battery, closing the action. Disassembly beyond this is not easy, so I had to resort to online Ruger manuals and internet videos to actually figure out all the nuances. And there are a few!

The 44 Carbine line was well liked and rapidly expanded. An online search for these guns leads to several versions – making me want them all. The base models look identical to the 10/22 with a brass bead front sight and folding leaf rear sight. One of mine is an "RS" model and it came with an aperture rear sight and sling swivels. The Sporter version featured a fine Monte Carlo stock while the "International" began Ruger's traditional Mannlicher style full-length wood. There's even a 25th Anniversary model.

Given the popularity of the 44 Carbine's fast-handling compact design, Ruger then created the 10/22. The 10/22 hit market not long after in 1964. Turning a popular .44 Magnum platform into a diminutive .22, half its respective size, is much easier than vice versa.

Having two of these rifles made me want to put an optic on one of them. Accessories are still available on numerous auction sites and I was able to find a set of 44 Carbine scope rings specifically made to mount on the factory drilled and

tapped receiver and barrel. I mounted a period 4x optic just for fun. It's old but it's clear and it makes the rifle look sexy.

Not only accessories, but also a whole host of replacement parts can be found for these guns. Every part you might ever need can be found online. Collectors, shooters and hunters will find it to be a fun gun to shoot, own and work on.

Through all my research on the 44 Carbine, I haven't found many complaints. There have been issues over the years of people who have found their stock to be cracked, down along the loading port. That IS a thin spot and I can't decide if it's from heavy recoil or misuse. Gas issues were problematic in the past but the advent and mass production of copper jacketed bullets remedied clogged gas ports. One of my rifles was short stroking when ejecting and loading. An Internet search led me to a post about adjusting the gas piston system. There is a long Allen screw in there that has to be set correctly in order to maximize gas flow. The post was actually from a Ruger employee who offered directions for correcting the issue. Apparently it's easy to get it out of adjustment when fully disassembling it to thoroughly clean it.

After its demise in 1985, Ruger did try to revive the 44 Carbine with a magazine-fed, gas-operated version loosely based on the Mini 14. They called it the Deerfield Carbine and it does resemble the older version minus the 10/22-lookalike style. This carbine was produced from 2000 to 2008 but I have yet to find one. From what I've seen, it does not have the old-time charm of the earlier guns.

An interesting piece of Ruger history, the .44 Carbine is something any deer hunter, hog hunter or collector would be interested in. I have yet to harvest a deer with mine, but I'm certain that – this year – it's in the cards.

Is That All

If the left didn't have myths,

By Alan Korwin

We've been reviewing the mind-numbing array of myths the left throws at good decent people who keep and bear arms. It's a parade of horrors that simply bounces off us; they can't understand why and you're about to learn why, in plain and simple terms.

They now have children mouthing many of their witticisms, without any depth of understanding, but that doesn't matter. There's strength in numbers, who cares if they know not what they do? "They're on our side!" cheer the democratic-socialist Bernie supporters, and others like them, Hillary's teammates, Schumer followers, people mesmerized (literally, not figuratively) by the so-called "news."

The best estimates show 100 million Americans safely keep arms in about 60 million homes. The left – a nice way to say socialists – can't stand that, is afraid of that, and wants to undermine that. They've changed their name repeatedly to disguise their purpose. It shows through whether they're progressives, or liberals, or the it-fools-no-one label "democratic socialists" one of their flipped-out heroes has adopted.

No, if the left didn't have myths they wouldn't have anything and children wouldn't know what to cheer for – because guns aren't the problem. Just look at the catalog you're holding. It's all the evidence you need. Which of all the products in here is related to the murder rate in any democrat-controlled inner city where the murder rate fuels the numbers leftist-controlled media use to flood the so-called "news"?

The loading equipment, cleaning and maintenance supplies, enhanced-performance products, replacement parts, customizing accessories – all the goodies you crave (who can blame you, such great gear!), these have virtually nothing to do with the problem. You own magazines of whatever size, and maybe plenty of them. These aren't causing any difficulties at all. From your derringers to your most-capable firearms, legally owned firearms are not the problem. Except in the mind of the left.

The problem is gang bangers in inner cities with stolen guns, smuggled guns, and straw-purchased guns, in other words, ILLEGAL guns. It doesn't matter what kind or size of guns these miscreants have, or how much ammo they shouldn't have that

they do have. What matters is that they're armed, and shouldn't be. It's ALL illegal, but evidence proves "illegal" has no stopping power; it's law enforcement that has the desired effect.

You've heard almost no attention paid to this core point, because the gun-control promoters aren't dealing with reality. And it's not crime they want to stop, it's YOU. All the plans for disarming us, where problems don't exist, generate mythical solutions, and leave real problems untouched.

Kids whose parents put them on mind-bending drugs instead of giving them the attention and love they need to grow up as decent human beings – that matters. Kids who don't have two parents, or have dangerous ones – that matters. The leftist enemies of The American Way, some in positions of power, they can't see this, aren't exposed to it, turn blind eyes or get radically defensive when the subject arises. In their added thoughts, instead of

"When your arms are inferior to the arms the government has, the balance of power tips against you."

reality, they make up or adopt myths to explain away the murderous scenarios that flood their eyes (only in "news" reports mind you) day and night. *It's the guns*, they convince themselves. Such people need treatment.

You buy another cool new holster, maybe Kydex instead

of leather, or finally get a ballistic nylon model. Your socialist adversaries don't know these things exist. Go to the books and DVDs section in this magalog (magazine-catalog), get some chamber-loaded flags, a better set of armorer's tools, OK, OK, go out and buy another sidearm (like you really need one) and some cool knives. Which of these makes Baltimore's insane statistics any different?

You can see and grasp this reality. Freedom's enemies are trying to disarm you – instead of enforcing the law against criminals. So many Americans can't grasp that reality. I just spoke with more than a dozen at the "March for Our Lives" rally. A greater assembly of ignorance I have never witnessed. Not one could hold a conversation, make cogent statements, describe the three things they were told they support: universal background checks, ban bump stocks, more school counselors. Oh, and limit one resource officer per school (armed guard). The closest we got to dialog was a constant change of subject with nothing explained.

The progressive liberal socialist left would have you believe that you own horrific murderous weapons of war (that only police should have, a

You've Got? they wouldn't have anything

disjoint none recognized). What does it mean to own a weapon of war if you're not in a war? And you never have been, and you never will be?

You at least understand that's precisely what the Founding Fathers sought – the goal was never to have the American public armed with “sporting arms.” When your arms are inferior to the arms the government has, the balance of power tips against you. The goal is precisely to have a public armed and ready to fight off all enemies, foreign and domestic. This requires arms every bit as good as what officials have. To the extent that ratio has slipped, so has the balance of power – and our freedoms. It allows “officials” to push you around even more, with reduced fear of pushback.

You read articles like this, join the NRA, GOA, SAF, JPFO and a dozen other similar groups, including your local clubs (very important!), so you get the real deal. The other side, the one seeking to disarm – or subarm – you, and the rest of the nation, they have become immune to this. You can tell them, they won't hear you.

What progressives are doing, because it's mythical, is not aimed at and cannot stop crime. Their old myth of “safe” make-believe gun-free zones? Those are schools. The criminals are laughing, we would too, except it's tragically dangerous, reckless and negligent. The left keeps coalescing power in the hands of central authorities.

Many leftists do not realize it – they are merely “useful idiots,” Vladimir Lenin's label for them – but this is precisely what socialists have done throughout history. Now who's a collaborator? Which country would you like as an example: The classic, Marx's Russia, or Mao's China, Castro's Cuba, North Korea, Venezuela, Bolivia, Vietnam, Cambodia...it's the same socialist story everywhere. Disarming the public makes them easy to enslave. And that's no myth.

Alan Korwin's website features plain-English books on state and federal gun laws for the public, and more common sense like you just read. He invites you to write to him or see his work at GunLaws.com, where you can get books and DVDs that help keep you safe.

New Designs From Kershaw Knives

Kershaw Knives and Emerson Knives have joined forces on a series of knives that combine the precision engineering of Kershaw with Emerson's uncompromising functional design.

The CQC-6K features a modified clip-point blade for versatile cutting ability. The blade has two finishes: a satin finish on the upper and a stonewashed finish on the grind. The handle's front scale of textured G-10 offers a secure grip and the handle's stainless steel back has a solid frame lock.

The CQC-6K is a manual opener using either the thumb disk or the patented Emerson "wave shaped feature." This opening feature enables the knife to be opened as it is removed from the pocket. The pocketclip is reversible for left- or right-handed carry.

Blade length: 3.25" Closed: 4.5" Open: 7.75"

059-31320 \$54.99

Designed by Belarusian custom knifemaker Dmitry Sinkevich, the new Kershaw Pub looks like nothing you've ever seen.

Closed, you'd never know there was a handy blade inside – although you would definitely see the equally handy bottle opener. And if you were exceptionally sharp-eyed, you might notice the slotted screwdriver tip right next to the bottle opener.

To reveal the blade, just push down on what looks like the key ring attachment. You'll see the blade move out of the compact handle. Keep pushing and the blade will swing all the way out, ready for use. The blade is a modified sheepfoot with a straight edge and clipped rather than rounded tip. The handle has an anodized aluminum front scale in bright blue and a steel back.

Blade length: 1.6" Closed: 3.1" Open: 4.5"

059-31323 \$24.95

Individual First Aid Kits From The Tactical Medic

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why we're offering individual first aid kits from The Tactical Medic. The Econo-IFAK contains a 4" Emergency Bandage, a TK-4 Combat Tourniquet, 1 Package of Rolled Gauze, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves. The Micro Kit #2 contains a 4" Pressure Bandage, 1 Package of Quick Clot Gauze, a TK-4 Combat Tourniquet, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves.

The **M2 Chronograph** comes with sensors, screens and one two-foot mounting bracket. A nylon carrying case and tripod are available options. The **CED7000 Shot Timer** is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the "next generation" Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

Adjustable Target Pistol Sight

This **Adjustable Target Pistol Sight** is precision machined and fits in a standard 1911 "Bomar slide cut." Yeah, the services of a gunsmith are required to cut the slide (unless your pistol already has a Bomar cut) but the results are worth it.

059-18210 \$53.95
