Dillon's RF 100 Automatic Primer Filler

3

- Eliminates the need for primer pick-up tubes!***
- Fills the primer tube while you reload!***
- Clear polycarbonate shield and protective housing***

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$50.95 each.

We READ Our Mail!

To whom it may concern: I would like to express my deep appreciation for your great service. A short time ago, the primer-feeding mechanism of my Square Deal "B" was not working properly. I called Dillon technical support, explained the problem, and it was suggested that I send the press to Dillon, which I did. Within a short time (about a week), I got the press back. Not only was the primer problem fixed, but several parts were replaced. It was evident to me that the press had been gone over thoroughly and that worn or potentially worn-out parts were replaced. My Square Deal "B" press is ideal for the amount of shooting that I do and it is a joy to use. The condition of the press when it was returned to me is just another example of the service and commitment to customers that makes Dillon an outstanding company. Again, thank you very much!

Bob Hollenbeck – Roseburg, OR

My Dear Friends at Dillon – My Square Deal "B" got home on Saturday and is now up and running. I can't begin to thank you enough for your service and products.

Paul B. O'Neill – Winter Haven, FL

Thanks for your letters, guys! Bob, you reminded me that the Square Deal "B" really IS the ideal reloading machine for lots of folks. Personally, I'd always preferred my RL 550s because I load for several calibers; but these days I'm primarily shooting 9mm in both pistols and carbines. So, for anyone who shoots mostly one caliber, the SDB is a no brainer. I won't mention any names, but a well-known gunwriter friend of mine swears by the SDB and has one in 9mm and one in .45 ACP. Smart guy!

Dillon Precision Products, Inc. now offers a smartphone app for both Apple and Android phone systems. Search for "Dillon Precision" at either the iPhone App Store or Google play.

6 Which Dillon is Right for YOU?

Page 8

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550C

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

DILLON

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls for each ear
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

The Taurus SPECTRUM

By J. B. Wood

With its long list of color combinations, the Taurus Spectrum is well named. There may be some gun-people who will dismiss it as just another small .380 pistol, albeit with an artistic touch. They will be missing a lot. For example, look at those color “panels” that are set into the steel slide and polymer frame.

They are neither hard nor soft, but somewhere in between, and are a perfect gripping surface for the hand and fingers. When you want something like this, go to the experts. Taurus did. The origin of the special panel material was an international company called PolyOne (polyone.com), of Avon Lake, Ohio.

The panels set into the slide, in a swooping recess, take the place of the usual retraction serrations. The recesses are deeper at the rear, and to my fingers, offer a better grip than serrations. On

the frame, the surfaces give just the right amount of adhesion, firm, but not rough.

Let’s get the color stuff out of the way, so we can concentrate on the other good design features. The first production, like the test gun shown here, will be in basic black. A little later, there will be “standard” versions with frame and panel combinations in white, black, and gray. Eventually, there will be 20 colors offered, with some add-on to the price for special orders.

Some colors will not be offered, as certain pigments affect the durability of the polymer parts. Can’t have that. I’m not going to try listing all of the possible color combinations here, as it would take up too much space. I’m sure that most readers, unlike this low-tech writer, will have access to the web. Go to the Taurus site.

With an empty weight of only 10 ounces, the Spectrum will definitely not be a drag on your belt

The Spectrum, left & right sides.

The controls: Slide latch, magazine release.

Takedown latch, above the trigger. With the latch slot turned to horizontal, slide unit is moved off toward the front.

The Spectrum, fieldstripped.

The two magazines, 6-round and 7-round, and the Super Vel test ammo.

or pocket. The other numbers are also small. Its 5.4 inches long, with a 2.8-inch barrel. Height is 3.8 inches with the 6-round flat-floorplate magazine, and 4.4 inches with the finger-extension 7-rounder. Width is 0.89-inch or 0.99 if you include the tiny slide latch.

Overall, everything is beautifully rounded – no square edge anywhere. At the lower rear of the trigger-guard, a slight recess allows the next finger to ride higher. At upper rear, a generous in-curve sets the Spectrum solidly in the hand. On the longer magazine, the superb design of the end piece gives a perfect rest for the small finger.

The falling-barrel locking system of the Spectrum has two good effects. It makes the slide easi-

er to retract, and softens the felt recoil. The trigger system is a true Double-Action-Only, with no reset. The internal striker is always “at rest.” There is no manual safety, but an automatic striker block is cleared only in the last bit of trigger pull.

Speaking of trigger pull, this one is smooth and easy. Taurus lists it at “7 to 9 pounds,” and to my educated finger, they got it right. On a straight-through pull you don’t feel the little hesitation at the end before let-off.

With a slow pull, it’s there, and you can “stage” it for careful aim. The “experts” say you shouldn’t do this. If you’re familiar with the pistol (and you should be!), it’s not a problem.

BL 550 Dillon's Basic Loader

\$287⁹⁵

O54-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount O54-22051 \$50.95

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader!

The interchangeable toolhead (Page 15) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$26.45 each, or \$24.45 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (bottom right photo) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550s

AUTO PRIME SYSTEM

Includes:

- Primer Housing /Shield
- Primer Slides, Large/Small
- Pickup Tubes, Large/Small
- Pickup Tube Tips, Large/Small
- Magazine Tubes, Large/Small
- Mag. Orifices, Large/Small

RL 550C ACCESSORIES

A. RL 550 CALIBER CONVERSION KITS
 Contains: Shellplate, powder funnel and locator buttons. Available in all calibers; please specify caliber desired.

O54-RL550 CONVERSION \$47.95 (Exotic calibers, \$57.95)

B. AUTO POWDER MEASURE SYSTEMS

Additional powder measures stay on the toolhead. Never change powder measurements again!
 RL 550 Powder Measure **O54-20782, \$84.95 ea.**
 Magnum Rifle Powder Bar **O54-21353, \$32.95 each**
 X-Small Powder Bar **O54-20780, \$32.95 each**

C. DELUXE QUICK CHANGE ASSEMBLY

With a quick change assembly and a caliber conversion kit (SOLD SEPARATELY), you can convert in less than a minute. Complete with:

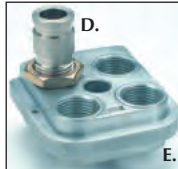

- Toolhead
- Powder Measure
- Powder Die
- Toolhead Stand

Price without Dies, **O54-22058, \$112.95**

Loading dies sold separately on Pages 34, 35 & 52.

D. POWDER DIES

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "belling" adjustment.

O54-20064, \$12.95 each
Three or more, \$11.95 ea.

X-Large Powder Die, O54-21253, \$19.95 each

E. TOOLHEADS

Don't adjust dies when switching calibers. These precision tool holders hold your dies in perfect alignment, making caliber changes quick and easy.

O54-13909, \$26.45 each
Three or more, \$24.45 ea.

F. TOOLHEAD STANDS

The ultimate in convenience for keeping your reloading bench clean and uncluttered.

O54-22055, \$22.95 each
Three or more, \$20.95 ea.

G. 1" BENCH WRENCH
O54-10842, \$7.95 each
Two or more, \$7.10 ea.

H. RL 550 CASEFEEDER UPGRADE

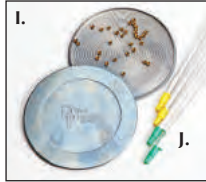

Available for most pistol cartridges – will not work with rifle cartridges.
 Large Pistol O54-14450
 Small Pistol O54-14451

\$279.95 (110v US Model)

Large Pistol O54-14453
 Small Pistol O54-14454

L. MACHINE MAINTENANCE KIT

Provides you with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications. Available in combination with a spare parts kit for your machine.

Maint. Kit & Spare Parts Kit O54-97016, \$33.95

M. LOW POWDER SENSOR

Provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1000 grains, a buzzer will sound and a bright red LED will light.

O54-16306, \$42.95

N. EQUIPMENT DUST COVERS

This packcloth nylon machine cover comes equipped with a D-ring, allowing the heavy duty zipper to be locked.

RL 550 Cover, **O54-13795, \$23.95**

(O.) Master lock, **O54-13083, \$3.95**

Quick-Change Cover (for use with powder measure) **O54-11143, \$14.95**

P. UNIVERSAL MOUNTING HARDWARE KIT

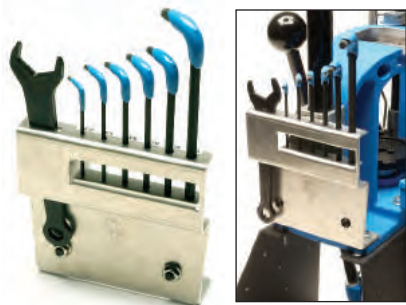

Includes: 4-Grade 5 Hex Bolts, 4-Lock Nuts, 4 Flat Washers, 4-Fender Washers, 2-Wood Screws.

O54-14355, \$5.49

16 Dillon Reloading Accessories

Dillon's Reloading Accessory Package Deals include: either Dillon's D-Terminator Electronic Scale or Eliminator Balance Beam Scale, a Dial Caliper, a Primer Flip Tray, a Bench Wrench, an 8 oz. bottle of Case Lube, a pair of clear safety glasses, a machine cover and the latest edition of the Lyman *Reloading Handbook*.

SDB (Balance Beam Scale)	O54-14482	\$192.95
SDB (Electronic Scale)	O54-14483	251.95
RL 550 (Balance Beam Scale)	O54-21143	191.95
RL 550 (Electronic Scale)	O54-22117	250.95
XL 650 (Balance Beam Scale)	O54-21430	207.95
XL 650 (Electronic Scale)	O54-22118	266.95

Dillon's Toolholders are available for your RL 550, XL 650, SL 900, and Square Deal B, and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL 650 with Wrench Set	O54-11555	\$30.95
XL 650 w/o Wrench Set	O54-11554	19.95
RL 550 with Wrench Set	O54-11541	29.95
RL 550 w/o Wrench Set	O54-11543	18.95
Square Deal B with Wrench Set	O54-19441	27.95
Dipped Ball-End Hex Wrenches	O54-11483	18.95
One-Inch Bench Wrench	O54-10842	7.95
Square-Deal-Only Wrench	O54-19970	8.95

Dillon's Strong Mounts

increase your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 650	O54-22051	\$50.95
XL 650-only	O54-22052	47.95
"SDB"	O54-22223	66.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	O54-97126	\$154.95
----------------------	------------------	-----------------

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Aluminum Roller Handle	O54-17950	\$47.95
------------------------	------------------	----------------

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	O54-22214	\$44.95
1050 Tray Kit	O54-22215	44.95

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

Low Powder Sensor	O54-16306	\$42.95
-------------------	------------------	----------------

Quick-Charge Cover for use with powder measure.

Quick-Charge Cover	O54-11143	\$14.95
--------------------	------------------	----------------

With Dillon's RL 450 Upgrade components, you can, either all at once or one assembly at a time, upgrade your RL 450 reloader to an RL 550!

Dillon's Case Preparation Equipment

CV-2001 054-20493 \$189.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

CV-750 054-19455 \$145.95

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To

CM-2000 Case/Media Separator 054-20675 \$76.95
CM-500 Case/Media Separator 054-21045 \$47.95

accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:
Case Cleaners are available in 220 volt!
 Euro CV-2001 054-22047 \$214.95
 Euro CV-750 054-19473 \$170.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners now have a **Five-Year Warranty** on the electric motor.

Rapid Polish

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run.

Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **O54-13804 \$8.95**
Case (20 pc.) **O54-20255 135.95**

Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **O54-13733 \$11.95**
Case (20 pc.) **O54-20256 168.00**

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) **O54-21375 \$135.95**

Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.

15-pound bag **O54-13287 \$23.95**

Ground corn cob polishing media – the best there is for that final polish.

15-pound bag **O54-13496 \$15.95**

Super 1050/RL 1050 Short Trim Die Toolhead

054-62219
\$229.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. *(NOTE: the Blue 1050 toolhead stand – Part Number 054-62200, \$49.95 – is not included.)*

The Taurus **SPECTRUM** *Continued from Page 11*

The slide of the Spectrum locks open after the last shot. The slide latch is external, but it is not made for routine thumb operation. It is tiny, with minimal protrusion. To disengage it, it's easier to just pull back slightly on the slide. On the plus side, this also ensures proper feeding of the top round from a fresh magazine. This applies to all pistols, not just this one.

The magazine release button is in the usual location, at the rear terminus of the trigger guard. For you left-handers, it is reversible. On the right side of the frame above the trigger is what appears to be a wide-slotted screw. That's the takedown latch. Fieldstripping the Spectrum is marvelously simple.

With the chamber empty and the magazine removed, use a cartridge rim or other non-marring tool to turn the latch counter-clockwise until the slot goes from vertical to horizontal, and move the slide assembly off toward the front. Lift out the recoil spring unit and the barrel, and you've done it. When you put it back together, moving the slide assembly into place automatically resets the latch.

On a small, deep-concealment pistol of this type, sights are of less importance. These are adequate for the purpose. Square-picture, they are part of the slide, thus non-adjustable. Protrusion is minimal – they're not going to snag on anything.

Shooting the Spectrum was interesting in several ways. Ammo was Super Vel (We're glad to see you're back!), their 80-grain SCHP load. Standing, with a two-hand hold, at 7 and 15 yards. The felt-recoil was brisk, but it was not painful. The good ergonomics of the grip tamed it.

The 7-yard groups averaged 3.5 Inches, and at 15 yards about an inch more. They were right in the middle of the 8-inch black of the Champion VisiShot targets. And yes, for the best ones, I "staged" the trigger. There were no feeding or ejection problems.

For the "basic black" version shown here, suggested retail is a very reasonable \$289. A final "color" note – the slide will also be offered in matte stainless steel. And, the Taurus design team is to be commended for not putting a silly flipper safety in the wide, smooth trigger, nor squaring the trigger guard.

Dillon's New Rapid Trim 1500 Case Trimmer

Dillon's RT 1500 shown installed on an XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **O54-62164** is **\$332.95**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **O54-13141**, are **\$20.95** each. Upper lock rings, **O54-13559**, are **\$5.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

26 Dillon's Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access, has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle

Conceal-Carry Performance Series

Conceal-Carry Performance Series revolver holsters can be worn strong side, appendix carry or cross draw and are fully molded. Auto holsters are strong-side only.

Mernickle's "Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

Pistol Pouch, Black	054-17027	10.95

'Border Shift' Ammo Bag

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

I.D. Card Holder
054-14575 \$2.95

Black Ammo Bag **054-13755** **\$25.95**

Dillon's Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles. *Dimensions: 66" x 27.75"*

054-18146 \$65.00

Mr. Bulletfeeder[®] by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

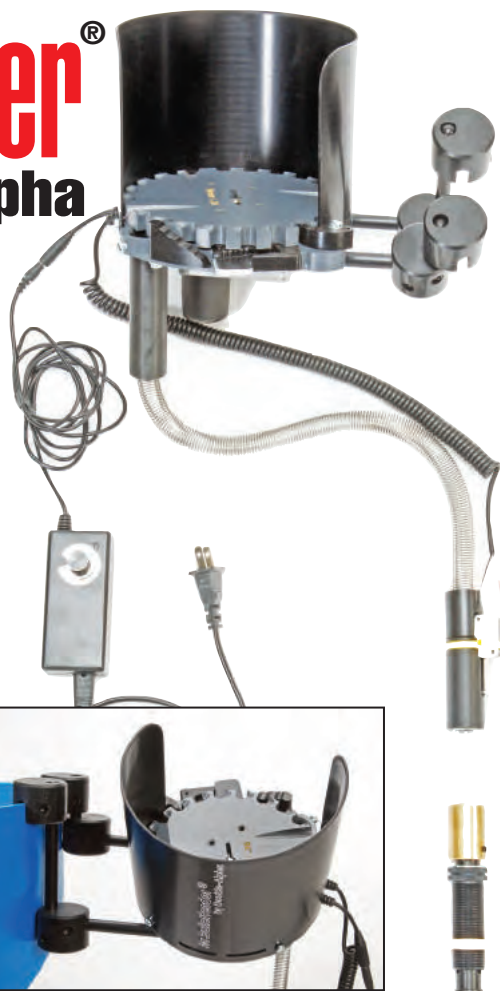

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Mr. Bulletfeeder[®] Replacement Parts & Spares

Having separate Bullet Dropper Dies allows you to quickly swap toolheads of the same caliber sizes without having to remove and readjust the bullet dropper die.

The Output Tube Assembly is what connects the Mr. Bulletfeeder by DAA's collator to the dropper. It feeds the bullets into the dropper, keeping them aligned and feeding smoothly. The Small Output Tube Assembly is required for the rifle calibers (both .223 and .308) as well as when loading very short, light 9mm bullets, such as many of the 90-grain bullets available. The Large Output Tube Assembly is required when loading 9mm (over 115-grain bullets), .40, or 45.

Lose a spacer? This four-pack of Nose Guide Spacers is identical to what comes with the Mr. Bulletfeeder. These are used to adjust the height of bullets, so they don't spill out or flip upside-down.

Dillon's Pistol Die Sets

Size Die

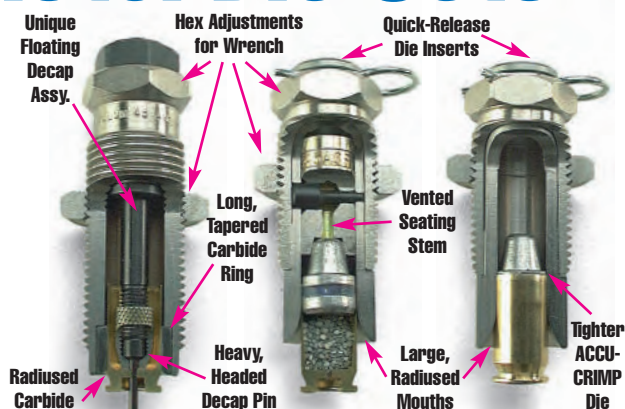

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the tool-head and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

Dillon's Rifle Die Sets

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a head-space case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

JP Enterprises

The JP Enterprises GMR-15 9mm carbine is pictured above equipped with an Aimpoint Comp M5 sight and an Elite Tactical Systems GLK-18 Magazine with a Taylor Freelance +10 Magazine Extension.

By Mark Pixler

I'm NOT worthy.

That was the thought that popped into my head when I started shooting the JP Enterprises GMR-15 9mm Carbine. The Aimpoint Comp 5 optic I had ordered specifically for the GMR-15 hadn't yet arrived, but I wanted to get it out to the range and try it with various ammo, so I clamped on a GG&G quick-detach scope mount with a Bushnell 1.5 – 6x scope I happened to have in my office and took it to the range.

I had done a quick-and-dirty bore sighting standing against the north wall of the dining room, through the kitchen, and onto the south living room wall with a laser boresighter and figured that was good for about 10 yards or so. As it turned out, I was pretty close. From the bench, the carbine shot a ragged single-hole group from the bench at 10 yards. Not exactly at my point of aim, but close enough for me to determine that JP's handiwork was...well...awesome.

I tried the GMR-15 with the 9mm ammo I had on hand: factory Sellier & Bellot 115-Gr. FMJ and my handloads using SNS Casting's coated 135-

Gr. RN projectiles and Accurate #5 powder. Both shot equally well, so I used my handloads when I took the GMR-15 to a local subgun match. While taping up my targets at the match, one shooter commented that my double taps looked like little peanuts – all over the target, mind you, but little peanuts! Lets me know that I made the right decision on my “carbine load” with the 135-Gr. bullets and Accurate #5. The downside is that despite the polymer coating, the compensator on the GMR-15 did get leaded up a bit (sorry JP!) and it took the trusty old comp-cleaning recipe of 50/50 white vinegar and hydrogen peroxide to clean it up.

When I started my “quest” for a pistol-caliber carbine, I tested an AR-15 that used the standard Colt/UZI-style magazines and thought the mags were a bear to load, and found that because of the distance the round had to travel from the magazine to the breech, feeding problems occurred with some bullet shapes. That, and the proliferation of GLOCK-style magazines on the market helped me narrow my choice to a PCC that could use GLOCK mags.

GMR-15 9mm Carbine 37

Note the position of the magazine release. It's easy to reach with the trigger finger. The ejected cartridge case deflector comes in handy for left-handed folks or stages where right-handed shooters are required to shoot from the left shoulder.

JP's billet PSC-17™ Dual-Charging Upper Receiver has both the traditional AR-style charging handle and a non-reciprocating charging handle on the left side of the receiver.

The GMR-15 worked flawlessly with the following: factory GLOCK 33-round mags, a MagPul PMAG 15 that I used while bench resting it, and an Elite Tactical Systems GLK-18 31-round magazine with a Taylor Freelance (taylorfreelance.com) Magazine Extension. I highly recommend that you pick up the ETS C.A.M. Pistol Magazine Loader if you're going to be using the 30+ round magazine with extensions, though, in order to save your fingers. Even with the 10-round extension, I was only able to insert 35 rounds with my (aching) thumb alone.

When I spoke to Adam Burt, the general manager at JP Enterprises, about reviewing a GMR-15, I asked about an optic to go with it. I wanted to use an optic worthy of the rifle. Too often, I'll see someone purchase a premium rifle and hobble it with a bargain-basement optic. Adam suggested the Aimpoint Comp M5 and introduced me via e-mail to Brittany at Aimpoint (aimpoint.com).

What I like most about the Comp M5 is that it can be used as an occluded-eye gunsight. In other words, you leave both lens covers closed and the rear lens cover has a window that allows you to

see the red dot on a black background. With both eyes open, you see the red dot superimposed over the target and it works just as if you were looking through the sight tube. Some of the earliest red-dot sights worked this way, and unfortunately, they fell out of favor over time. For those of us with eye-dominance issues, they work particularly well. For normal folks, maybe not so much. Fortunately, they can use the Comp M5 with both lens covers open as intended.

The carbine and sight worked well together, far outpacing their somewhat hapless operator at the local monthly subgun match. I did manage (eventually) to hit everything I aimed at, with the exception of a few plates on several plate racks, which required repeat shots to knock down. My fault, not the gun's or sight's.

My misses might have had a bit to do with the hasty boresighting technique I used when I mounted the Comp M5. Sort of a "well, it's about 15 paces from the corner of the photo studio to this spot outside the door in the hallway and that ought to be pretty good" effort. I did notice that given

In the photo above, the lens covers on the Aimpoint Comp M5 sight are closed in the author's preferred method of operation – as an occluded-eye gunsight. At right, the Comp M5 pictured as the maker intended it to be used. Note the clear window in the rear lens cover.

This photo shows the JP Thermal Dissipator inside the MK III Signature Series Modular Handguard and the 3-Port Compensator before the author befouled it with his handloads.

how far the sight is above the bore, zero-distance is pretty critical on the AR-15-style PCCs. That's one reason why serious PCC competitors tend to have both close- and medium-range optics mounted on their guns, similar to serious 3-gunners.

Since I'd shot one of the subgun matches before, I decided roughly 10-15 yards would be adequate for my purposes. In the future, I'll probably go the two-optic or irons-and-optic route as well.

Meanwhile, I have to tell you that the JP Enterprises GMR-15 is not your garden-variety PCC. And, that the GMR-15 I tested isn't your garden-variety GMR-15. Pricing for the GMR-15 starts at \$1699. This particular rifle would retail at around \$3000. For the extra money, what you get is the JP PSC-17™ Dual-Charging Upper, JP EZ Trigger Fire

Control Package with an Armageddon Gear Revolution Roller Trigger, JP 3-Port Compensator, JP MK III Signature Series Modular Hand Guard, JP Thermal Dissipator, and a Gray Cerakote finish.

There's a reason serious professional, competitive and recreational shooters choose JP Enterprises rifles. Quite simply, it's because JP Enterprises has the reputation of offering premium products designed to exceed one's expectations and for providing stellar customer service. In this or any other industry, there's not much more you can ask for in a company.

CCW Tactical Shotgun Strippers⁴¹

California Competition Works' Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

Tandem Tactical Stripper **O54-00303 \$55.00**

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device (C. & D.) that will accommodate up to a 2-1/4" duty belt.

- A. Six-Shell Tactical Stripper **O54-18606 \$23.95**
- B. Four-Shell Tactical Stripper **O54-18605 22.95**
- C. Three-Shell Aluminum Stripper* **O54-19475 34.95**
- D. Six-Shell Covered Tactical Stripper **O54-19225 33.95**

*Three-Shell Aluminum Stripper accommodates 2-3/4" shells only.

RCBS Trim Pro 2 Case Trimmer

Lyman Scale Weight Check Set

RCBS Trim Pro-2™ Case Trimmer O54-43231 \$139.95
 The RCBS Trim Pro-2 manual case trimmer now features a spring-loaded "universal" shell holder that will accommodate case head diameters from .250" to .625". Comes with pilot calibers: .22, .24, .25, .27, .28, .30, .35, .44 and .45.

Lyman Scale Weight Check Sets enable you to check/calibrate your scale using known weights.
 A. Weight Set .5 - 60.5 Gr. O54-15958 \$36.95
 B. Weight Set .5 - 210.5 Gr. O54-15959 48.95

Ammo-Burr Cartridge Deburring Sets

SHAVIV is – and has been – the leader in precision hand-deburring solutions since 1960, and now brings its experience to the ammo-reloading market.

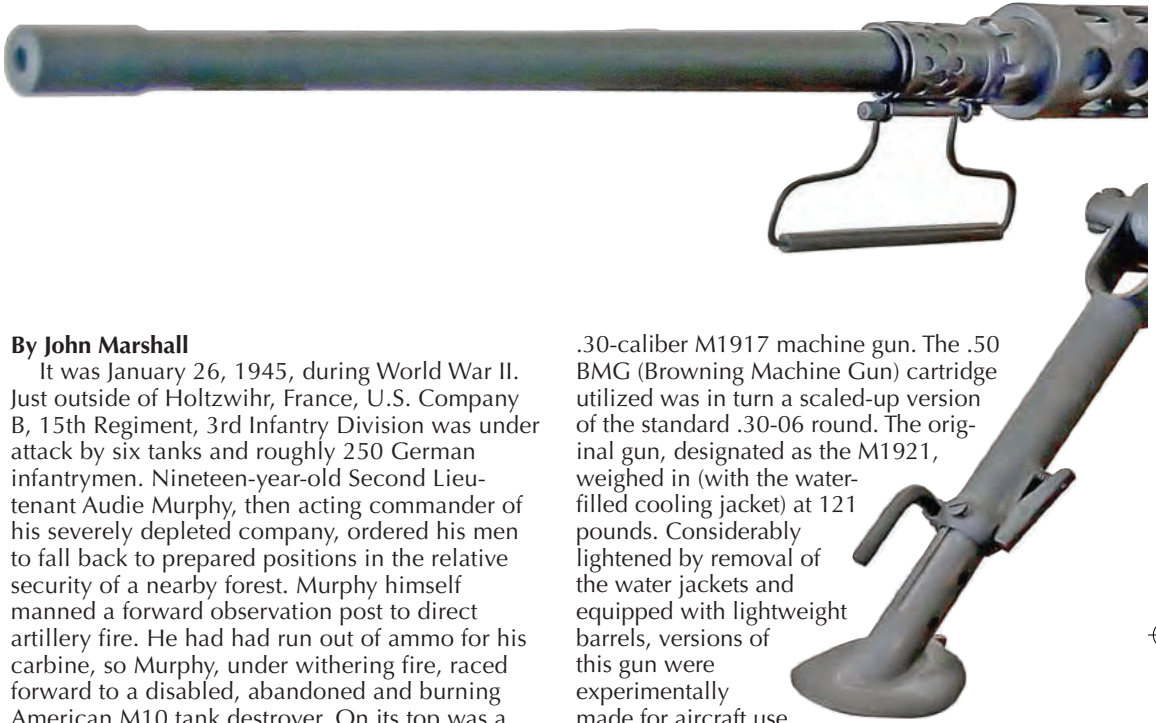

The Ammo-Burr Inner/Outer Cartridge Deburring Sets feature ergonomic comfort-grip handles for fast and accurate hand deburring. The .47" diameter inner chamfering

and deburring blade allows for chamfering and deburring cases from .17 to .45 caliber, and the outer-diameter chamfering blade will accommodate case mouth openings as large as 1.02".

A. Inner Chamfering Starter Set O54-62270 \$39.95
 B. Outer Chamfering Starter Set O54-62269 \$59.95 A.

CLASSIC FIREARMS: The Browning

By John Marshall

It was January 26, 1945, during World War II. Just outside of Holtzwihr, France, U.S. Company B, 15th Regiment, 3rd Infantry Division was under attack by six tanks and roughly 250 German infantrymen. Nineteen-year-old Second Lieutenant Audie Murphy, then acting commander of his severely depleted company, ordered his men to fall back to prepared positions in the relative security of a nearby forest. Murphy himself manned a forward observation post to direct artillery fire. He had had run out of ammo for his carbine, so Murphy, under withering fire, raced forward to a disabled, abandoned and burning American M10 tank destroyer. On its top was a Browning M2HB .50-caliber machine gun.

Murphy took immediate control of the big gun, and used it to virtually destroy advancing infantrymen on three sides of him. He figured that the tanks would not go further without supporting infantry, and he was right. After totally disrupting the German advance single-handedly for an hour, he ran out of ammunition. Leaping off the vehicle in spite of a serious leg wound, he returned to his troops to call in artillery. Then, refusing medical attention, he led his men forward in a counterattack to rout the enemy.

Shortly after he left the still-burning tank destroyer, it exploded, no doubt causing Murphy to thank his lucky stars. For his actions on this day, Murphy was awarded our nation's highest honor, the Congressional Medal of Honor. He was to become the most decorated U.S. soldier of World War II. Murphy died a month short of age 46 on May 28, 1971, in a tragic airplane crash.

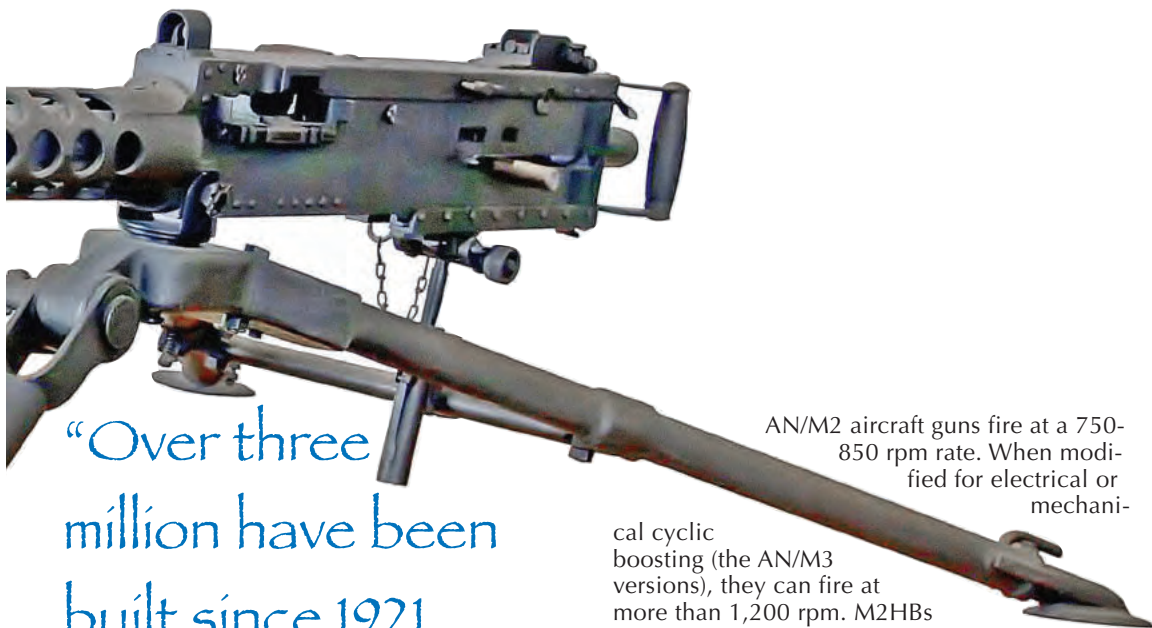

The formidable type of machine gun that Murphy used in that exploit is now the longest-serving military firearm in U.S. history. Over three million have been built since 1921, and it's still in service with our armed forces around the globe. It was originally designed by the immortal John Browning in 1918 as a water-cooled scale-up of his earlier

.30-caliber M1917 machine gun. The .50 BMG (Browning Machine Gun) cartridge utilized was in turn a scaled-up version of the standard .30-06 round. The original gun, designated as the M1921, weighed in (with the water-filled cooling jacket) at 121 pounds. Considerably lightened by removal of the water jackets and equipped with lightweight barrels, versions of this gun were experimentally made for aircraft use from 1921 through 1937.

Following Browning's death in 1926, Dr. S.H. Green further developed the original design from 1927 to 1932. He came up with a modified single receiver that could be used in seven types of .50-caliber machine guns by using different barrels and/or water jackets and other specialized components. Unlike the original M1921 (left side feed), this receiver could be rigged to feed from either the right or left side. This made it ideal for specialized use in aircraft wings and side-by-side mountings. In 1933, Colt made several prototypes, and the newly-designated M2 was manufactured beginning in that year with support from the U.S. Navy.

A version that dispensed with the water jacket, using a heavy air-cooled barrel, became known as the M2HB (heavy barrel). This dropped the weight to almost 84 pounds. A useful modification allowed a quick-change barrel, which could be headspaced to the receiver rapidly in the field. There was an AN/M2 version with a much lighter barrel (total weight 60 pounds) that became standard for use in military aircraft. This was widely used in many fighters and bombers during WWII. As a side note, an uncle-in-law of mine manned one of these as a waist gunner on a B-17 bomber

g M2HB .50 Caliber Machine Gun

“Over three million have been built since 1921, and it’s still in service with our armed forces around the globe.”

in North Africa during the war. The M2s were so well loved then that they picked up a nickname used even today, the “Ma Deuce.”

Since the M2 fires from a closed bolt on the short-recoil principle, it was easily modified for synchronized firing through the propeller of fighter aircraft. This system was used by the P-40 Warhawks used in the early stages of WWII, and notable for their use in China by Claire Chenault’s “Flying Tigers.”

The M2HB has a cyclic rate of 450-575 rounds per minute or at an optional slower rate. It can also be fired in single-shot mode. This fact prompted legendary U.S. Marine sniper Carlos Hathcock to custom-mount a Unertl scope on one and achieve enemy kills at incredible distances in the Vietnam War. One confirmed kill at a measured 2,460 yards was a world record until broken by a Canadian sniper in 2002. The

AN/M2 aircraft guns fire at a 750-850 rpm rate. When modified for electrical or mechanical

cyclic boosting (the AN/M3 versions), they can fire at more than 1,200 rpm. M2HBs used in quad mounts for ground use were particularly effective for anti-aircraft and mass personnel use at extended distances. During WWII, there were reports of snipers firing from trees being quickly eliminated by quad-50s simply cutting down entire trees at trunk level with long bursts. Army heavy weapons companies in the war were each issued one M2HB with a ground tripod mount for use where needed.

In October of 2010, the Army type-classified an M2A1 version which incorporates a new quick-change barrel and removable carrying handle, a very effective slotted flash suppressor, fixed headspace and timing (the point in the cycle at which the cartridge optimally fires), and a trigger-block safety. With these modifications, a shot-out or red-hot barrel can be changed out in seconds with no headspace adjustment. Conversion of M2HBs to the new system began in June 2011.

Browning M2s have been adopted as standard by an incredibly long list of other nations, a ringing endorsement of the gun’s abilities. The A to Z list of these nations is way too long to print here, but it is very impressive. Virtually any war you could mention, from WWII to the present, has seen the employment of these remarkable weapons. Over a dozen U.S. companies have been involved in its manufacture, and many have been produced worldwide.

The specifications for this robust machine gun are as follows: Weight: 83.8 pounds. Total weight including ground tripod and traversing/elevation mechanism: 127.9 pounds. Barrel length: 45

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

O54-21894 \$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

O54-19972 \$39.95

Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Berry's Mfg. Pan Sifter O54-17519 \$9.99

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mm.

Made in the USA and comes with a lifetime warranty.

Berry's Mfg. Clear Ammo Can O54-17518 \$9.99

Dial Caliper

- .100 per revolution.
- Covered track for longer caliper life – keeps chips out!
- Made of hardened stainless steel.
- Satin chrome finish. No glare.
- Easily read to .001-inch on large, adjustable dial.
- Measuring faces hardened, ground and lapped.

Easy to Read!**

O54-17171 \$39.95

Bullet Puller

Nobody's perfect. A bullet puller makes it easy to recover all your components.

Bullet Puller	O54-17999	\$29.95
Puller Cap	O54-17948	4.95
Collet Set	O54-17947	5.99

CLASSIC FIREARMS CONTINUED FROM PAGE 45

inches. Total length: 65.1 inches. Cartridge: .50 BMG/12.7x99mm NATO. Short recoil operated. Effective firing range (listed): 2,000 yards. Maximum firing range: 2,700 yards. Muzzle velocity with M33 ball ammunition (bullet weight 660 grains): 2,910 feet per second. Feed system: Belt fed, using M2 or M9 metal links.

The operation sequence should be learned by every U.S. infantryman. The bolt latch release must be locked down before beginning to load. The ammunition belt is fed from a side mount into the gun. The belt is pulled through the action as far as it will go, and while retaining the grip, pull back on the operating handle as far as possible and release it. This half-loads the gun. Pull the operating handle back all the way again and release it to

2d Lt. Audie Murphy, USA, wearing his WWII decorations. Next time you think you're having a bad day, the editor recommends going to cmohs.org and reading a few Medal of Honor citations. Start with Audie Murphy's.

complete loading. Unlock the bolt latch release by pressing down on it. Pressure on the thumb trigger will now fire the gun as long as it's pressed or until it runs out of ammo. It should be fired only in short bursts. To unload, lift the cover and remove the belt. Pull the operating handle back and look and feel in the chamber to be sure the gun is unloaded. Release the bolt and let it go forward, then lower the cover.

The M2 series machine guns are incredible. No other machine gun in history has had a longer service life – in U.S. service continuously since 1921. It is still a vital component of our small arms arsenal, and is in active service with many other nations as well. The grand old "Ma Deuce" is indeed a classic both in terms of longevity and devastating effectiveness.

Lyman Precision Funnel Set **NEW!** Lyman X-Block Gunsmith Bench Block

Lyman's Precision Funnel Set is the ideal system for the serious reloader. The Precision Funnel Set is made to be completely static free, with a body of die-cast aluminum and precision-turned aluminum inserts. No more powder clinging to surfaces, which can happen with lightweight plastic funnels. The solid construction and quality of Lyman's Precision Funnel Set will be apparent in its first use. This is no "one size fits all" funnel; the Precision Funnel Set uses precision-machined, caliber-specific inserts to properly fit the case neck. The inserts can be quickly and easily installed by simply pushing them into place and then pulling them out when changing calibers. The Precision Funnel Set also comes with a padded storage case that neatly stores extra inserts when not in use. The set includes inserts for .22, .243/6mm, .25/6.5mm, .270/7mm, .30 and .338 caliber rifle cartridges.

O54-11389 \$39.95

Having the right tool for the job makes any gunsmithing project so much easier! Without the right tool, you may damage fine finishes or break parts. The **Lyman X-Block** is the right tool for anyone driving pins out of firearms. It has all the features to get the job done smoothly and professionally. The X-Block has both a "V" slot and a rounded slot running across the face of the block to support a variety of barrels and slides. The block is made of a tough, non-marring polymer, and edged with a softer non-slip outer overmold. The block has multiple holes to take on most any project, as well as a molded-in magnet on the back side of the block to catch pins and other small parts as they drop out. Its large 5" diameter provides a stable base with plenty of support.

O54-11390 \$15.95

P365

SIG's New Everyday-Carry Gun

Story and photos by Doug Larson

Every once in awhile, a new gun comes along that changes the common standard. And the SIG P365 does just that.

Up until the P365 was introduced, a subcompact gun of similar size would carry only six or seven rounds of 9mm Luger in the magazine. That wasn't much, but it did permit the gun to be more easily carried discreetly, especially in a pocket. But now, the P365 has changed the game by increasing magazine capacity to 10 or 12 rounds. Somehow, SIG managed to stuff a modified double-stack magazine in a grip about the same size as those of most small single-stack handguns.

While small guns appeal to some because they weigh less than a full-size gun and take up less space so are easier to carry discreetly, they are generally more difficult to shoot accurately or rapidly. A shorter sight radius and often, fixed miniscule sights make accurate shooting a challenge. And a narrow, short grip that most of the time provides no place for the little finger to grasp the gun, make holding onto it under recoil very hard, especially when firing rapidly. The P365, though, will be a pleasant surprise to those lucky enough to get their hands on one.

I recently attended a special event at Gunsite (gunsite.com) where instruction was provided on concealed-carry techniques. For three days I carried a gun in a front trouser pocket using a Front Pocket Horsehide Holster by Galco (galcogun-leather.com) while most others in the class carried

a service-size or compact duty weapon concealed on a belt holster. However, the P365 proved to be so user friendly that I won the quick draw man-on-man contest where contestants were required to draw from concealment and deliver a hit on a steel plate before the opponent. And I do not consider myself to be a champion competitor – far from it. The SIG P365's shooter-friendly attributes played a huge role.

It's small, but still easy to shoot. The gun has a barrel length of 3.1 inches and an overall length of only 5.8 inches with an empty weight of just 17.8 ounces. It's slim with a one-inch wide grip and a slide that is actually about one-tenth inch slimmer.

A critical handgun dimension that affects ease of concealment is grip length. And here, the P365 essentially matches a Kahr PM9 and Walther PPK with an overall length of about 4.3 inches measured from the top of the sights to the toe of the grip with the flat-base 10-round magazine installed. But the magazine capacity beats both the PPK and PM9 by four rounds or 66 percent. That's thanks to SIG's patent pending, modified double-stack magazine.

While the P365 is comfortable to shoot with the flat-base 10-round magazine installed, SIG offers an extended baseplate for it, which provides additional gripping surface of about two-tenths of an inch, making the gun even easier to shoot. And remarkably, only another two-tenths of an inch longer, the 12-round magazine doubles the capacity of the other two guns. And with the 12-round

magazine, overall height of the gun still permits easy discreet carry, even in a pocket.

The trigger guard is generously sized and is significantly undercut to permit a higher grip, which helps to reduce felt recoil. The standard SIGLITE night sights are excellent and feature tritium filled vials, which make them visible in dim light. Even in broad daylight, the front sight is easy to see thanks to a bright-green ring surrounding the tritium vial. These drift-adjustable sights are worthy of a full-size gun.

A great aid in making the P365 a user-friendly striker-fired pistol is the trigger. It's a two-stage design with smooth take-up, a somewhat spongy second stage and then a positive break at just over four pounds. Reset is distinct. Although the trigger stroke description is not flattering, in actual use it is a very useful and easy-to-manipulate trigger that does not hinder accurate shooting.

The magazine-release button is located on the left side at the junction of the trigger guard and front strap. Some people with medium or small hands will have trouble ejecting the magazine though – the button could be more prominent. And the backstrap configuration, combined with the magazine baseplate, results in the rear of the baseplate contacting the heel of the hand, which keeps the magazine from falling free when ejected. However with practice and proper training, this shortcoming can be overcome.

The gun's polymer grip has slip-resistant texturing that reminds one of skateboard friction tape and is very effective in anchoring the gun in the hand. The grip module surrounds a stainless-steel chassis with slide rails in much the same manner as the SIG P320, which leads to speculation that SIG might offer different grip modules in the future.

The polymer grip module also features a SIG proprietary accessory rail just forward and above the trigger guard. SIG plans on offering a laser unit and tactical light for the gun. Up top, the slide is made of stainless steel with serrations front and rear and is finished with black Nitron, making for a durable and rust-resistant finish.

During the entire test period, there were no malfunctions of any kind with a variety of ammunition. And field stripping for cleaning is easy. After making absolutely sure the gun is unloaded,

the slide is locked to the rear, the takedown lever located just forward of the slide lock is rotated 90 degrees and the slide is moved forward to separate it from the chassis rails. The dual-spring guide rod assembly is then removed and the barrel is lifted from the slide.

Apparently SIG has big plans for the P365 and is planning to produce special self-defense ammunition and a suppressor for it. Additionally, an air pistol is in the offing that can be used for practice.

SIG SAUER, Inc.

Dillon's Bench Wrench Fits 1" Die Lock Rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to

re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Elzetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

SHOOTING TIP: THE C

Step 1: The concealing garment is flung back, the master hand acquires a grip on the gun butt, the support hand moves toward the body's mid-line.

Step 2: The gun comes out of the holster, the support hand is flat against the body and staged to meet the master hand.

Step 3: The hands meet high, the two-handed grip begins to build, the gun muzzle is up and oriented downrange, though not yet fully horizontal. The index finger is still outside the trigger guard.

By Duane Thomas

There are two schools of thought on becoming really good at executing a draw from concealment. (1) It's really not that important a skill to have, the important thing is to see the problem coming soon enough we can meet the enemy with the gun already in a two-handed firing grip. You'll commonly hear this attitude summed up as, "The fastest draw is to start with the gun already in your hands." (2) Being able to execute a fast draw from concealment is very important. Most of us carry our defense gun concealed, and, while seeing the problem coming early-on is certainly desirable, perhaps not always possible. Being able to produce the gun swiftly in an emergency is an important tool to have in our repertoire of defensive skills.

I believe both camps have valid points. Situational/environmental awareness is hugely important. So too is the ability to produce your weapon in a fast, efficient manner. So let's not argue about which is more important, and accept that having both in our bag of tricks is better than having simply one and not the other.

I cannot help but notice that many people in the "Being able to do a concealed draw is not important" camp are those who can't do a fast draw from concealment. Therefore they have to believe that hole in their skill set is immaterial. You'll also hear them say things like, "Drawing from concealment is a fine motor skill fraught with opportunities to fumble under stress." The truth is that doing a fast, efficient draw from concealment is just a matter of stringing together a sequence of big, sim-

ple movements, not the equivalent of performing brain surgery while wearing kitchen mittens that those who can't do it believe it is, and that stress-resistance, like smooth efficiency, comes with practice. Let me make this really clear: I'm not saying that doing a good draw from concealment doesn't require a serious amount of practice. It does. I'm just saying that the basic movements are simple and easy to understand, and, once we've put in the practice time, easily executed. The people who complain about how "hard" and "fumble-prone" is this process are those making excuses for their lack of practice. This brings us to the topic of how to do a good concealed-carry draw.

First, let's ask ourselves in what position our hands should be before starting the draw. I'm a fan of the John Farnam recommended approach of, the instant you realize you might be in a "draw" situation, grabbing the front of the concealing garment on the gun hand side, staging it to fling backward out of the way to expose the gun. Some people don't like that, believing this is a "pre-assault indicator," i.e. an alert opponent might recognize this means we're carrying a gun and ready to draw. By contrast we have the "knife blade" technique where the master hand is held stiff with the fingers outstretched, and the hand is supposed to "knife" between our body and the concealing garment. I don't like the knife blade because, in my experience, its success is highly dependent on the sort of clothing worn. A baggy shirt can easily snag our fingers as they should be smoothly "knifing" between the shirt and the vest/jacket. I prefer

CONCEALED-CARRY DRAW 63

Step 4: The gun is fully up and horizontal, and has just begun its extension toward the target. The index finger begins to slip inside the trigger guard.

Step 5: The gun is up almost into line of sight, the trigger is prepped.

Step 6: The arms reach full extension, the sights are aligned, at this point we clean up the sight picture if necessary, and apply that last little bit of force to the trigger to fire an accurate, aimed shot.

to grab the covering material and fling it backward out of the way, fully exposing the gun and holster. Thus, once we've gotten the covering garment out of the way, it becomes a non-factor in the draw, we will have the gun out and aimed and possibly even firing before the material has even settled back into place.

The most commonly prescribed starting position in "combat" pistol matches is "hands naturally at sides." I call that the "cold start" technique, since it simulates being taken totally by surprise. While I like the Farnam technique, honestly the vast majority of my own concealed draw practice goes from the cold start. Thus if I see the problem coming in time to stage my hand in the Farnam technique, I'm ahead of the game; if I don't, it's no big deal.

Looking at the photos taken for this article, by the way, I have to confess I didn't realize I fling the gun hand side of my vest to the rear so hard during a concealed draw it actually wraps around behind my body. I deliberately carry my cell phone and key ring in my right lower vest pocket, partly because, as a right-handed person, that's the most efficient location to access them and put them away, but also because I know it gives that side of the vest a nice amount of weight to pull it up and to the rear, totally exposing the gun and holster on the draw.

It's commonplace to break the draw down into four steps. Some people do three. I break it down into six. While some people believe "a three-step draw is faster than a four-step draw because it has

less steps," that's really not true. What makes a technique fast isn't how many "steps" it has, it's how much wasted movement we've cut out, and that's far easier to do when we can place attention to how we execute the technique all along the way. Actually, I'd probably be faster if I broke the draw down even further than this.

Step 1: The concealing garment is flung to the rear, the master hand acquires its grip on the gun butt. The web of the hand snugs into the recurve of the grip tang, the thumb is flagged high, both to assist the hand sliding into position and to open up the side of the grip panel for the support hand to slide into place. The support hand begins to move toward the body's mid-line.

Step 2: The gun comes out of the holster and is rotated forward, it's drawn high, the support hand is now flat against the body, getting it out of the way of potentially being crossed by the gun muzzle.

Step 3: The hands meet high, the two-handed grip begins to build, the gun muzzle is up and oriented downrange, though not yet fully horizontal. The index finger is still outside the trigger guard.

Step 4: The gun is now out and horizontal and begins to be pushed forward. At this point, and not before, the finger begins to slide inside the trigger guard.

Step 5: The gun is on its way toward the target, the sight are visible in our lower vision, the trigger is prepped.

Extra Loading Data Labels, O54-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are ideal for Reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL650 cartridge bins are 6-3/4" long x 3-

7/16" wide x 2-13/16" deep.

- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em - you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools - the list is endless.

Swab-its – A Swab for Every Job!

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!" The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

4 Oz. Liquid O54-15444 17.59

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is for use in warm weather (F60+), Lite is a thinner viscosity for lower temperatures (F30+).
Slide-Glide Standard O54-15571 \$7.95
Slide-Glide Lite O54-15572 7.95

Microton UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

O54-75125 \$9.95

Sweet's Australian

7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps. O54-18599 \$14.95

70 ELITE TACTICAL SYSTEMS MAGS & LOADERS

Elite Tactical Systems' C.A.M. Rifle Magazine Loader loads AR15, AK47, AK74, FN SCAR-16/17, AR10, G36, Steyr AUG, MP5, CZ Scorpion EVO, Colt SMG, UZI and more in 5.56x45/.223, 7.62x51/.308, 7.62x39, .300BLK, 5.45x39, 9mm and more.

The ETS C.A.M. Pistol Magazine Loader loads most 9mm or .40 caliber pistol magazines – including single stacks. It doesn't force rounds through the feed lips, so it won't damage magazines.

Both ETS C.A.M. magazine loaders will lift up to 10 rounds of ammo directly from an ammo tray!

ETS 30-round AR magazines have a built-in coupler that allows multiple magazines to be connected in seconds with no tools. Clip-on dust covers keep dirt and debris out during storage.

ETS magazines for GLOCK® pistols are compatible with aftermarket floorplates for GLOCK magazines, feature

special grip ribs on the floorplate to aid in extraction and are easy to disassemble for cleaning and maintenance.

Made in USA With a Lifetime Warranty!

74 SHOOTING TIP: THE CONCEALED CARRY DRAW CONTINUED FROM PAGE 63

Step 6: The arms hit full extension and the trigger is a fraction of a pound away from breaking. At this point, depending on how solid is our index, and how far away the target, we might or might not need to take a few extra hundredths of a second to clean up the sight picture before breaking the shot.

Prepping the trigger on the draw, while simple to do once you've mastered it, is something we need to put a serious amount of practice time into before we ever attempt it with live ammo. I practiced this for a solid month, hours every day, before I ever tried it on the range with a hot gun. Even then, I started out doing it with live ammo really slowly. The days of sub-second draws were considerably in the future at that point. I would HIGHLY suggest you do likewise.

It's important to realize, the only reason we break the draw down into steps is to make the technique easy to learn. As our skill level progresses, eventually the steps all blend into one, and it's no longer "1-2-3-4-5-6," it's just "draw." One movement. That happens with practice.

The technique I've just described is commonly called "the angle draw" because the "up then out" movement track is described as "like a 90-

degree angle." It's really not, but describing it that way does seem to help people understand the basic concept. Sometimes you'll hear this referred to as "the American technique" since it's how the vast majority of trained shooters in North America have been taught to draw. The angle draw has multiple good qualities. It's easy to understand. It's easy to execute. It allows us to get the sights up into the eye/target line early and use them to guide the gun on-target while it's still moving forward. This is very important for people who shoot multiple different gun types, or are using a gun that doesn't fit their hand and point perfectly, or who have a less-than-solid index, since we can use our eyesight to largely compensate for those problems. The shortcoming of the angle draw is that it's not as fast as some other techniques. Drawing the gun high before beginning to drive it forward does introduce some wasted motion. However, this article was about the angle draw, the simplest, easiest-to-execute technique that will swiftly give us a good level of speed with accuracy on the draw, and we'll leave discussing other options for a later date.

Scout Scope Mounts for AK, SKS Rifles

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle **O54-25374 \$79.99**
Scout Scope Mount for SKS Rifle **O54-25373 78.99**

78 YOU BET YOU MANAGING YOUR BRASS COMPONENTS

By Jerry D'Amico

Which is the most important of the four components of your loaded round? Is it the projectile (bullet)? Is it the primer? Is it the powder charge? Or is it the only component that contains the rapidly expanding hot gases that propel the projectile every time you fire a shot?

Yes, I'm talking about the brass case. I know many shooters who will buy expensive jacketed bullets, expensive imported powders, and insist on specific primers. Then they load them all into brass cases they picked up off the ground at the range, which they roughly sorted, if at all, barely cleaned, and never checked before, during or after loading! I have a friend who was shooting very well at a national-championship match, when a ruptured 9mm case stuck in his chamber and cost him what should have been a first-place finish. If he had been more selective about the source of his brass, or at least carefully sorted his cases before, during, and after loading he could have prevented that disaster.

Let's look at sourcing and sorting your brass for best results and start with the most common caliber in use today, 9mm. The techniques we discuss can be used for other pistol and rifle calibers as well.

SOURCING

In a perfect world we would shoot only factory ammo, or buy and load only factory-new brass, shoot it once and leave it behind. I don't know anyone who can afford to do that! But, even with factory new un-primed cases, manufacturers recommend you size them before loading. So the only time saved using new instead of previously fired cases is the sorting and cleaning. Since you should sort and inspect ALL your cases before loading, regardless of the source, factory new brass cases only save you the cleaning step.

The next best option is so called "ONCE FIRED" cases. But unless you are the one who fired them "once" how can you be certain? I've never met anyone who could tell exactly how

many times a case has been fired by looking at it! I have safely loaded and fired many well-worn pistol cases, and seen factory-loaded cases split the first time they are fired! YOU are the best judge of the condition of a spent case and whether or not it is safe and efficient to load and shoot it.

If you are an occasional shooter, recovering your own cases and others at the range should keep you supplied. But if you train or compete

regularly you will soon discover, as I did, that scrounging for brass doesn't provide a consistently adequate supply of quality cases. Remember, if it's free, you'll get what you paid for! I have a friend who shoots an open gun and buys a batch of new .38 Super Comp brass at the beginning of each year. He loads major power factor and shoots the daylight out of it all season long. He leaves it on the ground after the last match of the year and watches with great amusement as guys scurry to pick it up thinking they've struck gold!

Seek out experienced reputable brass dealers, and I am not talking about guys on craigslist.org trying to peddle brass they picked up at the range! Many gun shops and reloading-component retailers offer fired brass cases you can buy with some confidence. Sites like gunbroker.com allow you to check the feedback and reputation of dealers before you buy, forcing sellers to be at least somewhat accountable for the quality of their product.

SORTING

If you do your own sorting it's easy, right? Anybody can separate 9mm from .40 S&W and all the other calibers. But wait, what about separating your 9mm from .380 Auto and worse, 9mm Makarov? Yes, both of those smaller cases are turning up everywhere; especially .380s now that GLOCK and other makers are turning out more of the smaller pistols. The differences in the three are minute, just one millimeter in case length separates Makarov (9x18) from standard 9mm (9x19) and .380 Auto (9x17). The smaller cases can quickly

**"IT'S A LOT EASIER
TO READ
HEADSTAMPS
AND ASSESS THE
CONDITION OF
CLEAN CASES THAN
DIRTY ONES."**

OUR BRASS.....

COMPONENTS FOR MATCH-GRADE LOADS

find their way, undetected, into your loaded ammo and your chambers, with disastrous results!

The only way to successfully sort your cases is by LOOKING at and READING EVERY HEADSTAMP. Now you see why starting with clean brass is so important! You can sort your cases by CALIBER easily enough when they are still dirty. But you should FINE sort and inspect only clean cases. It's a lot easier to read headstamps and assess the condition of clean cases than dirty ones. Yes, it is tedious and time consuming, but you don't get without giving. Some shooters use those plastic slotted sorting bins you fill with cases and shake. *[Editor's note: See page 46 for the Shellsorter.]* They work well for rough sorting by caliber but only if you sort one or two handfuls of cases at a time. You still need to FINE sort by hand, but you can save time and sort by HEADSTAMP (manufacturer) at the same time. All cases of the same caliber are NOT created equal! Like different bullet styles and brands of ammunition, most guns will actually cycle and shoot better with some brands of brass cases over others. Serious shooters experiment with different brands of components to find the perfect load. You should do the same with your brass cases; find the brand that works best in each of your guns. Using the same brand will produce more consistent velocities and more reliable performance.

Look for obvious signs of damage, excessive wear, fatigue and multiple firings. Watch for older "dated" cases, primer flattening, "flow," and piercing or other signs of excessive pressures. Split, dented and otherwise damaged cases should obviously be scrapped. Check your nickel cases more closely; they tend to split sooner than yellow-brass cases. Some shooters don't like them for that reason. Nickel cases are prized for their bright appearance and some believe they feed more easily. Manufacturers seem to favor them for high-end self-defense loads. If you do load them it is not a good idea to mix nickel and yellow brass in your loads as they can feed and perform differently. Headstamps worn to the point where they are hard or impossible to read is a telltale sign of multiple firings. The same is true for multiple ejector "nicks" and wear around the case rim.

Look closely for BERDAN primed cases, the ones with the two tiny flash holes instead of one large center one. These cases are of foreign manufacture. The headstamps are often an odd mixture of hard-to-decipher numbers and letters we like to call "HIEROGLYPHICS." The first time you break a decapping pin will be the last time you don't check for BERDAN primers. Headstamp rule of thumb:

"If you can't read it, don't load it!"

Be on the lookout for steel cases, most are also foreign manufactured and easy to spot with dull gray steel coloring and odd headstamps. But foreign and even some domestic manufacturers produce brass and nickel-colored or "washed" steel cases. You should check all your cases with a magnet to be sure.

Watch for "NATO CROSS" stamped cases, most commonly 9mm and some rifle-caliber cases. The stamp is a "CROSS" inside a circle and always indicates the original round was manufactured to military specifications with a crimped primer pocket. The military specifies the "crimp" to keep primers from backing or blowing out from increased case pressure when the guns get hot during rapid or full-auto fire. To avoid primer-seating problems you must swage the primer pockets before trying to seat a primer. *[Editor's note: While all NATO-CROSS-stamped cases have crimped primer pockets, not all cases with crimped primer pockets are so marked.]*

A quick way to sort out split and damaged cases is to grab a handful at a time, cup your hands together and shake them. Solid cases of the same caliber will make the same sound when shaken together. A split, dented or damaged case, however slight, will make a very different, distinctive sound as it strikes the good cases. That sound is best described as a "jingling" or what we refer to as "sleigh bells." Remove the cases from your hands one at a time, shaking in between, until the "jingle" stops, the last case you removed before the "jingle" stopped is the damaged one. You can check larger lots of cases at one time by spreading them across a towel on a hard surface. Pass your hand back and forth with just enough pressure to shuffle the cases against each other. You will get the same result as shaking them a handful at a time.

The same trick works for separating cases of different calibers. Even an undamaged case of a different caliber will make a distinctive sound when shaken with other cases of the same caliber. In my next article I'll discuss the most efficient ways to clean your brass and look at some brass "hazards" to watch out for.

Jerry D'Amico has more than 40 years of experience as a competitor, gunsmith, ammunition re-manufacturer and writer. He spent 15 years as an Emmy Award winning broadcast journalist. Most recently, he is the founder and president of matchgradebrass.com, a leading supplier of premium reclaimed processed brass cases to shooters across the nation. 80 Do You Support Background Checks?

How Do You Answer Without Creating Enemies?

By Alan Korwin

If you say, “Yes,” purists on the gun-rights side, and anyone who understands background-check plans are really gun-registration schemes, is going to look at you with suspicion, or as a downright traitor.

Try saying, “No,” and much of the civilized world will come down on your head. Lamestream media will lead the charge, and no attempt to explain how “rights don’t need permits,” and what “infringed” means will matter. Or be heard.

It’s tough to spot at first, but this is a classic

loaded question like, “Are you still beating your wife.” No simple answer gets you out of hot water. My guide to handling hostile interviews generally suggests responding to these landmines with a question, to balance the scales. “What makes you think I ever beat my wife?” Because the person asking questions controls everything, doing that takes control back when an interview is that badly biased. Happens often.

In this specific case though, “Do you support background checks?” has a better answer: “Not as currently configured.”

That doesn’t immediately inflame the sides, it allows for time. The interviewer experiences some dead air, speechlessness, must think. You stand a chance of a realistic dialog. It’s not anything the media has had to contend with so far.

Power players on the pro-rights side need to get this message: stop being defensive, or in denial, or caving, and get a chance to confront the issue fairly. Force the other side to defend what turns out to be an indefensible position.

“Not as currently... what? What do you mean?” Now they’re yours.

“Well, background checks as they currently stand aren’t working, right? They haven’t affected the Muslim jihad or the jihadis, and they have no effect on psychotic children willing to mass murder their classmates. After two decades, murderers in the inner cities are all armed and they keep killing each other. So, I don’t know, do you support that?”

“If I believed background checks would solve our problems, then yes, of course I would support them, any rational person would. Why even ask? However, the homicide problems we’re having aren’t related to background checks.”

Background checks – so highly praised up until now – are a self-evident failure. When you read the proposed new laws, America is being misled by a few basically hard-core left-wing “democratic socialists.” Thinly disguised as legitimate political operatives, they’re not looking out for our safety. Their true goal, with the background-check canard and deceptive bills they’ve drafted, is to disarm the American public, coalescing power in the armed hands of government. It only sounds radical because the mass media hides it so well. In fact, it’s exactly what socialists do, straight out

of history books.

The youths now chanting the background-check chant have no clue about any of this. They haven’t been asked a single hard question on any of the so-called “news” shows.

Democratic socialism, progressives, leftists, liberals, the constantly changing names of the one group promoting the so-called background-check scheme (which kids are now crying for) ought to be enough to alert America to what’s going on here. Start with the obvious. The highly touted current system has been in place for decades – decades – and inner-city murderers are as armed as if there was no system at all. The homicides and armed assaults

are unabated. That’s clue number one.

Every mass-murder jihadi assault and crazed spree murderer in a school – promoted on TV and print media for weeks – was unaffected by the multi-billion-dollar background-check system. Even the “news” has pointed this out. Though that’s a clue, now it’s a bargaining chip – “we need more background-check-something,” we’re told. When you look at the proposals, though, none of them would affect the featured mass homicides at all (with a single military exception, at a cost of hundreds of millions of dollars).

Sending the names of more than ten million innocent gun owners to the FBI every year has zero to do with stopping crime. ZERO. Do you even need to be told that? A background check for criminals needn’t require sending YOUR name to the FBI – that’s a scam you’ve been sold.

The FBI could just as easily send encrypted “wanted posters” to dealers, so dealers can see if the buyer is a fugitive, murderer, rapist, arsonist, jihadi, illegal alien, certifiable lunatic or other miscreant – all barred by EXISTING law from buying guns. People who probably shouldn’t be on the street at all, from a safety perspective. Maybe you never thought about that. Maybe the “news” never mentioned it. The abused and assaulted gun community knows it well. Digital wanted posters would be far less expensive, also.

Every background-check proposal skips the part where, after criminals walk into gun stores with cash and get turned down, crooks simply walk out frustrated with their money in hand. Is that what “97% of the public supports,” as democrats claim?

No, as currently configured, a thinking person who cherishes freedom and law cannot support what the socialist left and their media teammates are vigorously promoting.

Not all that long ago there were NO background checks on gun sales. There wasn’t even any paperwork. Americans simply bought guns at Sears, or by mail. I saw ads for mail-order guns in magazines I got at the local luncheonette. Kids went to school in pickup trucks with rifle racks carrying loaded guns. You wouldn’t THINK of touching someone else’s gun. Shoot up your class-

mates? You couldn’t IMAGINE such a thing. Where would a person even GET such an idea? Read that line again, it’s important.

The second reasonable answer to the loaded question about gun checks is this: If I believed background checks would solve our problems, then yes, of course I would support them, any rational person would. Why even ask? However, the homicide problems we’re having – jihadis, maniacs, inner-city gangs – aren’t related to background checks.

America has been sold a bill of goods, by socialists and a band of groupthink followers they’ve snowed, including some otherwise pretty decent people.

This debate is not about background checks. That’s psychological diversion. This is about socialism vs. The American Way. It’s so obvious after decades of evidence, save for the misleading effects of the media’s constant deceptive drumbeat. That drumbeat is effective, isn’t it? But now you know.

Alan Korwin’s website features plain-English books on state and federal gun laws for the public, and more common sense like you just read. He invites you to write to him or see his work, at Gun-Laws.com, where you can get books and DVDs that help keep you safe.

New Products from Slip 2000

Slip 2000’s **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant. Everything you need to care for your firearms in the field! Fits easily into your range bag for easy maintenance after the match.

O54-11652 \$22.95

Each Slip 2000 **Gun Wipe**

packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack O54-11674 \$11.95

725 Gun Cleaner Degreaser should truly be called Super Degreaser.

This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! *Note: To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.*

16 Oz. O54-19237 \$19.95

Slip 2000 **Extreme Weapons Lubricant (EWL)** was designed for use on chain guns and machine guns like the MP5 and the M249 LMG. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. O54-11644 \$16.95

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don’t want to use a thick grease.

4 Oz. O54-11645 \$19.95

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! *Note: It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.*

4 Oz. O54-11646 \$10.95

New Designs From Kershaw Knives

Kershaw Knives and **Emerson Knives** have joined forces on a series of knives that combine the precision engineering of Kershaw with Emerson's uncompromising functional design.

The CQC-6K features a modified clip-point blade for versatile cutting ability. The blade has two finishes: a satin finish on the upper and a stonewashed finish on the grind. The handle's front scale of textured G-10 offers a secure grip and the handle's stainless steel back has a solid frame lock.

The CQC-6K is a manual opener using either the thumb disk or the patented Emerson "wave shaped feature." This opening feature enables the knife to be opened as it is removed from the pocket. The pocketclip is reversible for left- or right-handed carry.

Blade length: 3.25" Closed: 4.5" Open: 7.75"

054-31320 \$54.99

Designed by Belarusian custom knifemaker Dmitry Sinkevich, the new **Kershaw Pub** looks like nothing you've ever seen.

Closed, you'd never know there was a handy blade inside – although you would definitely see the equally handy bottle opener. And if you were exceptionally sharp-eyed, you might notice the slotted screwdriver tip right next to the bottle opener.

To reveal the blade, just push down on what looks like the key ring attachment. You'll see the blade move out of the compact handle. Keep pushing and the blade will swing all the way out, ready for use. The blade is a modified sheepfoot with a straight edge and clipped rather than rounded tip. The handle has an anodized aluminum front scale in bright blue and a steel back.

Blade length: 1.6" Closed: 3.1" Open: 4.5"

054-31323 \$24.95

Individual First Aid Kits From The Tactical Medic

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why we're offering individual first aid kits from The Tactical Medic. The Econo-IFAK contains a 4" Emergency Bandage, a TK-4 Combat Tourniquet, 1 Package of Rolled Gauze, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves. The Micro Kit #2 contains a 4" Pressure Bandage, 1 Package of Quick Clot Gauze, a TK-4 Combat Tourniquet, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves.

The **M2 Chronograph** comes with sensors, screens and one two-foot mounting bracket. A nylon carrying case and tripod are available options. The **CED7000 Shot Timer** is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the "next generation" Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

Adjustable Target Pistol Sight

This **Adjustable Target Pistol Sight** is precision machined and fits in a standard 1911 "Bomar slide cut." Yeah, the services of a gunsmith are required to cut the slide (unless your pistol already has a Bomar cut) but the results are worth it.
