Which Dillon is Right for YOU?

Page 28

Square Deal B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W Long to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 24

RL 550C

The World's Most Versatile Reloader, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 750

Truly the state of the art, our XL 750 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 16

Super 1050

Our highest-production-rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

Page 12

RL 1100

Our newest reloader features an innovative eccentric bearing drive system that means smoother operation with less effort, along with an upgraded primer pocket swager. Loads up to .308 Win./7.62x51 cartridges.

ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

'Tis the Season...

A state of hopefulness, regardless of how one achieves it, is ultimately the only way to endure a year like 2020. We know people have experienced tragic losses of all kinds – personal, economic, physical – and have suffered the mental anguish that comes with such losses.

If we've learned anything from our country's history, it's that Americans are capable of surviving adversity and rising up to meet the challenge together – every time. The secret to our strength as a people is unity. We are strong, independent and willing to do whatever it takes to get the job done. It's been proven time and time again throughout our history.

So, take a minute and reflect upon what being an "American" means to you.

**President Ronald Reagan once said,
"I know that for America there will always
be a bright dawn ahead."**

Here at Dillon we choose to act in a manner echoing his confidence.

**From all of us to all of you,
Merry Christmas and a Happy New Year!**

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls for each ear
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

CP 2000[^]

Dillon's First DEDICATED Case-Processing Machine!

- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL 1100 and Super 1050, the CP 2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP 2000 will make your task MUCH easier.

Rapid Trim 1500 Case Trimmer[^]

Dillon's RT 1500 shown installed on an XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **P83-62164** is **\$349.99**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **P83-13141**, are **\$20.99** each. Upper lock rings, **P83-13559**, are **\$6.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

The Lipsey's P80 Reproduction

By Duane Thomas

On September 1st, 2020, Lipsey's, a well-respected firearms distributor famous for doing limited-production runs of guns in partnership with major gun companies, released onto the market their "9mm Pistole P80 Classic Edition," supposedly a recreation of the original military-issue P80, i.e. the pre-Gen1 GLOCK 17 taken into Austrian military service in 1982.

Is it? Not really. I think Ken Hackathorn summed the matter up wonderfully well when he said to me, "The Lipsey's P80 is to an original P80 as the 'reproduction' Ford Mustang is to a 60s Mustang. It looks like the original, mostly, but there was no way they could build exactly the car today they did 50-plus years ago. Nor would we want them to. For one thing, today's Mustang – incorporating improvements in technology that simply didn't exist when the Mustang was first introduced – is a much better car."

Ken says that as a legendary firearms instructor who, when training "government employees" in Austria, was actually issued a P80 to teach with. As he put it, "When I wasn't on the range, teaching, and shooting that gun, I was back in my room taking it apart to see how it differed from the Gen1 GLOCK 17s we had in the U.S."

Lipsey's P80s are built totally in Austria, as were the original P80s. Having said that, in my opinion the Lipsey's P80 is closer to being a recreation of the United States import Gen1 GLOCK 17 than it is a P80.

Even many serious GLOCK fans have never shot, handled, or even seen a Gen1 GLOCK 17 in anything other than pictures. The Gen1 GLOCK 17 was only imported

into the United States for about two years, from 1986 to 1988, before being supplanted by Gen2, and is by far the rarest of the GLOCK "gens." I have owned three Gen1 GLOCK 17s over the years, including my current example seen in the photos.

External appearance-wise, Lipsey's was not able to get permission to replicate the original Austrian military markings. While they have reproduced the "P80" logo, and in the original font to boot, they were not allowed

to apply the P80 emblem, which is very distinctive, a triangle inside a circle, it kind of looks like a simplified version of the Colt Delta Elite emblem. Okay, that would have been cool but the fact it's not there is no big deal.

The finish on the gun's major metal components is not the original Tenifer which was a cyanide/cyanate process. With tightening environmental protection regs they can't even do Tenifer in Europe anymore. GLOCK

Austria has, however, used an nDLC (non-Diamond-like Carbon) finish that looks as much as possible like the original Tenifer.

Rather than the horrid, flimsy, breakage-prone polymer adjustable rear sight, famous for flying off the gun if you ever actually shot it, with which most Gen1 GLOCK 17s were sold, the Lipsey's P80 has the infinitely preferable GLOCK fixed rear unit. You will note, the one change I have made to my own Gen1 GLOCK 17 was to upgrade its rear sight to a fixed unit. This is not, actually, period inauthentic since it was something you could always ask the folks at GLOCK USA in Smyrna, Georgia to do for you.

The Lipsey's P80 (bottom) shown with a United States commercial Gen1 Glock 17 (top).

Gen1 G17 front sights were also notorious for leaving the gun. The Lipsey's P80 is fitted with the improved front sight, held in place with a hex screw traveling all the way through the sight from bottom to top, to which GLOCK switched-over several years ago. The Gen1 front sight – and for decades after Gen1 – was a cube literally wider than it was tall (.165" wide by .155" tall). The rear notch was .165" – tight relative to the fat front sight – giving a fairly cramped sight picture. The new GLOCK sights, like those on the P80, have a front sight .150" wide and .160" tall, slightly narrower and taller than the originals; unfortunately, they've also narrowed the rear notch to .135", making the overall sight picture even tighter than on the original. Of course, every serious GLOCK shooter upgrades to steel sights anyway. So, who cares?

The very earliest GLOCK featured a thin barrel profile called by collectors the "pencil barrel." After durability issues arose, in short order that was changed to a thicker, more-durable profile and has stayed there ever since. The Lipsey's P80 does not replicate the pencil barrel, nor would we want it to. The rifling is GLOCK's classic polygonal treatment.

The gun does feature the Gen1's famous flat extractor, at variance to the later LCI extractor. I've always liked the looks of the original flat extractor, and the fact it's been recreated for the Lipsey's P80 falls onto the Super-Cool side of the ledger.

Moving down into the frame, we find numerous differences from both the original P80 and the Gen1 GLOCK 17. Original P80s actually have the serial number on the frame impressed directly into the polymer dust cover. In Europe this is considered no big deal because the barrel is the serial numbered part considered "the gun." In America, however, the frame serves that purpose. The serial number impressed into the polymer frame was actually one thing preventing the GLOCK 17 from being imported into the United States until January 1986, because the BATF considered that too easy to remove with just a Dremel tool. Finally, GLOCK added the metal serial number plate to U.S.-import guns.

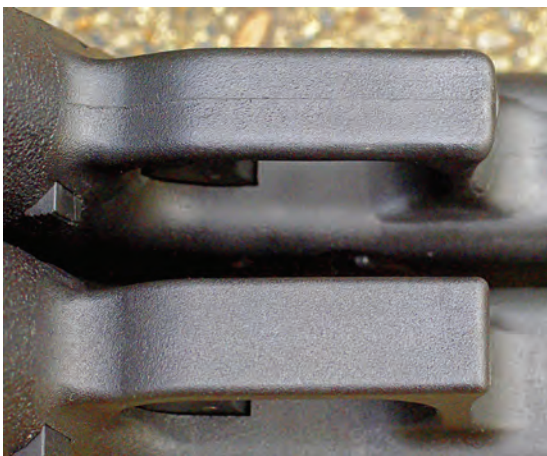

Serial number plates on the original U.S. import Gen1 GLOCK 17s were actually black. On the Lipsey's P80 they're silver-colored, as GLOCK serial number plates have been now for decades.

The original molds for Gen1 GLOCK 17s have been repurposed, altered, worn-out, or otherwise lost over the intervening decades. Thus, GLOCK in Austria set

about recreating the Gen1 molds. In the process, however, they just couldn't stop themselves from doing the job WAY better than it was back in the mid-1980s.

To paraphrase Ken Hackathorn again (just want to give credit where it's due), by 1986 when the GLOCK hit U.S. shores, injection-molded polymer was a fairly mature technology. There were some really good pieces of injection-molded polymer being produced in the world. Firearms manufacture lagged.

Examine the frame of an original Gen1 GLOCK 17, it's just not terribly well-turned-out. To start with, there's a huge seam running all the way around the frame, from the front of the dust cover, around the trigger guard, down the frontstrap, and in the rear from the top of the frame all the way to the bottom of the backstrap, where the two pieces of the mold met. On the front of the trigger guard, where it's textured, the lozenge is irregularly shaped, and doesn't follow the contours of the "hook," instead it's somewhat bulbous. Literally it looks like someone stuck a piece of chewed-up bubblegum to the front of the trigger guard.

The seam traveling along the original gun's trigger guard, and lack thereof on the repro tells the tale of the difference in quality between the two.

The Austrian firearms engineers "recreating" the Gen1 frame 30-plus years later cleaned all that up. There is no seam on the frame, instead everything is smooth, as it always should have been. The people building the new frame molds couldn't even stop themselves from putting the trigger guard texturing inside a nicely rectangular lozenge that's actually dished to follow the shape of the trigger guard hook. No one who knows the original guns, when looking at a Lipsey's P80, could ever possibly

mistake one for the other. The frame on the latter is FAR better made.

It is, of course, of the original "one pin" configuration (actually two pins, but for some reason a lot of people don't seem to find it necessary to count the trigger module pin), lacking the "second pin" i.e. locking block pin added to the design later to adapt the basic GLOCK design to more heavily-recoiling cartridges like .40 S&W. This was never really necessary in 9mms. In fact, Gen5 9mms have done away with the locking block pin, so no loss here.

Moving inside the gun, the Lipsey's P80 has not recreated the Gen1 uncaptured guide rod. Instead it's the same captured unit, with a single flat-wire spring threaded onto a single polymer guide rod, found in Glock 17s for decades before being supplanted by the Gen4/5 dual springs/guide rods system. This is fine, the vast majority of people prefer the captured unit since it

makes disassembling and especially reassembling the gun easier.

Moving into the trigger action, GLOCK did not recreate the black fire control parts found in the earliest GLOCKS, nor did they go back to the early pattern with straight “hook” on the trigger bar. Instead we find the trigger system is Gen4, including the dogleg on the Gen4 trigger bar.

Trigger pulls went 6-1/4 pounds according to my NRA weight set, which is about what we’d expect from a gun fitted with a Gen4 trigger system. Installing a factory GLOCK 4.5-pound connector, and a conservative polish job to the relevant fire control contact surfaces, could bring that down considerably. (Once we got past the very earliest black-colored GLOCK fire control parts, connectors are among the few parts that have remained the same across all gens.)

Original GLOCK magazine-release buttons were notorious for ending pretty much even with the frame and being far too short to easily depress during a speedload. The P80 has GLOCK’s current-production Gen3 button (Gen4 notwithstanding, Gen3 is still being produced since it’s the latest GLOCK gen that’s legal in California). No one will ever accuse the Gen3 button of being overly long but it’s better than the original.

No, GLOCK did not recreate the original non-drop-free magazines, instead the gun comes with two drop-free 17-rounders (for those of us living in areas of the country where people are still free, anyway). Again, this is fine, most folks prefer the drop-frees anyway.

Two areas in which the Lipsey’s P80 does faithfully follow the P80/Gen1 pattern, the frame has no equipment rail, and there is no lanyard hole at bottom/rear of the butt. That last thing in particular bugs me because the lanyard hole serves as the attachment point for a Pearce Plug which I view a non-negotiable, mandatory upgrade to a GLOCK.

The Lipsey’s P80 comes in a reproduction of an original GLOCK “Tupperware” box (actually there were multiple gens of the “Tupperware” box), along with a Certificate of Authenticity, and all the other various accoutrements we expect when we buy an autopistol in the early 21st Century. Strangely, there was a cleaning brush included but no cleaning rod, as there was with the original Gen1s, which I find a bit strange. All this inside a well-designed and attractive “Classic Edition” oversleeve.

I test fired the Lipsey’s P80 with eight different sorts of 9mm ammo. To start with were my handloads consisting of the X-treme 147-grain HP over Hodgdon’s Longshot. 115-grain hardball was on-hand from both Sellier & Bellot and Super Vel in their “Certified Select” remanufactured line. Factory hollowpoints consisted of the Hornady 124-grain XTP, Super Vel 90-grain JHP +P, and from Wilson Combat their 115-grain TAC-XP +P, 124-grain XTP +P and 147-grain XTP Subsonic.

Frankly, I found my shooting hampered by the heavy trigger pulls and not-terribly-visible sights. If I really slowed down, I could punch out the tight groups my ego demands, at the seven-yard line. At speed, or at any sort of real distance, not so much. There’s a reason that sights and triggers are the two areas automatically (pun intended) upgraded by serious GLOCK shooters: they’re less than great out-of-the-box. Reliability was 100 percent, as we would expect from a GLOCK 17.

SUMMARY

Gen1 GLOCK 17s these days do not exactly litter the streets. Clean examples tend to command four figures. Lipsey’s MSRP for their P80 is \$669, so right off the bat it’s a smokin’ deal. This was not meant to be a super-expensive curio that no one would ever shoot because it just cost too much. As Jason Cloessner, Vice President and Product Development Manager at Lipsey’s said to me, “MSRP is just a number we came up with because we had to. We always intended the P80 would sell in gun stores for around \$550. In other words, just slightly, like maybe \$20, more than a current production, standard Glock 17.” However, that plan failed to take into account the perfect storm of COVID-19/riots/election year driving gun sales during 2020.

Lipsey’s initial order with GLOCK was for 10,000 P80s. When they received the first half of the order from GLOCK, 5,000 units, and released them on September 1st, they literally sold out that day. A lot of those guns have wound up on online auction sites like GunBroker. (The next 5,000 guns are expected sometime around 30 to 60 days later.) Price gouging on GunBroker has not been as vicious as we might expect; winning bids for a P80 tend to in the \$600 to \$650 range. So, more than Lipsey’s intended, but not totally insane either.

Although the Lipsey’s P80 will, in fact, be a limited edition, it remains to be seen just how “limited” it will be. The option for Lipsey’s to place reorders with GLOCK, and have more guns made before all is said and done, is there. I would not be surprised to see that happen; the basic idea is that good.

I’m sure a lot of people buying Lipsey’s P80s will keep them unfired in the box. I get that. Certainly, these guns’ worth is not going to go down over time, if kept in pristine condition. For myself, I’m a shooter, and guns are meant to be shot. If I wanted to carry a Lipsey’s P80, I would put a set of steel, high-visibility sights on it, install a factory GLOCK 4.5-pound connector, polish up the trigger action to smooth out what’s there, throw in a Vickers Tactical/TangoDown slightly extended magazine release button, find some way of retaining a Pearce Plug in the gun, and when I was done I would have a pretty darn sweet self-defense/carry gun.

Case Preparation Equipment

Vibratory Case Cleaners Case/Media Separators

CM-2000 Case/Media Separator[^] P83-20675 \$81.99
 CM-500 Case/Media Separator[^] P83-21045 \$49.99

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works

great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

CV-2001[^], US 110v P83-20493 \$199.99
 CV-750[^], US 110v P83-19455 149.99

Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Dillon's D.C.L. non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

8 oz. bottle P83-13733 \$14.99

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that’s still only a part of the story.

Bullet Seating Die (Pistol)

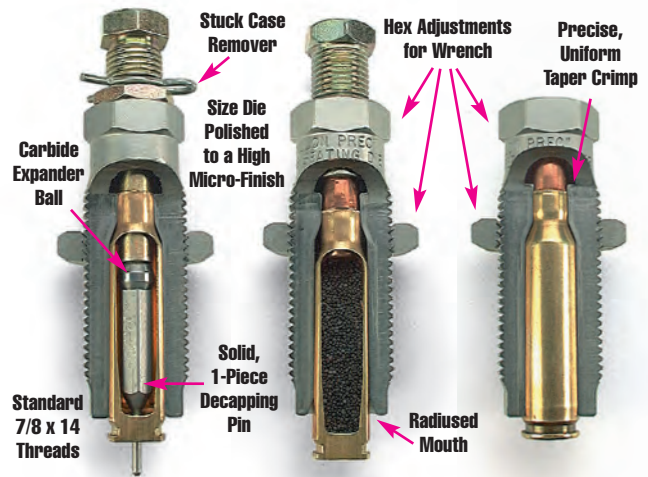

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon’s double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Mr. Bulletfeeder[®]

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collar to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

A definite "keeper" – the author's S&W .38/44 Outdoorsman that Hamilton Bowen rebuilt as a .45 Colt.

Trimming the Herd

By Peter Caroline

There's a good deal of truth to the rumor that one's first gun is usually pregnant. However, I never suspected that at some point there would be a total population explosion. My collection grew from one Daisy Golden Eagle BB gun, acquired when I was seven years old, to a 300-square-foot subterranean storage area filled to bursting with pistols, rifle, shotguns and ammunition to fit. I guess it was inevitable...I've reviewed a lot of guns in the 30 years I've been writing for *The Blue Press*, and too many of those guns were just too nice to part with. I also have my "reference collection," or as my friend Bill refers to it, "that weird shit that you like." In recent years, however, reality slowly dawned. I'm probably not immortal, even though my mother lived two weeks past her 100th birthday. I live in a quiet suburban retirement community about 25 miles south of Tucson, Arizona. Our local gun shop is usually well stocked with the treasures of deceased members of our commu-

nity (I say "usually" because, right now, people are buying up anything that will shoot!). While I am healthy, still ambulatory and of sound mind, I'm fully aware that things could go south in a hurry, leaving my wife with the unenviable task of disposing of my collection. Given the current boom in firearms sales, I decided that now was a propitious time to trim the herd and, hopefully, realize some profit. My situation may be similar to that of some of you reading this. Here's how I worked it out.

The first question was, where do I start? I didn't want to sell ALL of my guns...some must remain, for concealed carry, home protection, small-to-medium game hunting and general amusement. For me, at least, it was easier to select the most essential guns, the keepers, and then grit my teeth and unload the rest. For sentimental reasons, I kept the two classic S&W revolvers, a .38 Special and a .32 S&W Long, that Bobby Tyler restored for me, and a S&W .38/44 Out-

doorsman that Hamilton Bowen rebuilt as a .45 Colt. Its pre-ban ivory grips bear my monogram, and I've already picked out its next owner. Everything else that I've kept will serve a purpose.

The choice of a selling venue was key. I tend to be conservative and risk-averse. I ruled out the auction houses right away. A good buddy of mine was for many years one of America's top restorers of movie and art posters, and his tales of auction house flubs, surprise expenses and outright misdeeds are truly frightening. I could be wrong, but better safe than sorry.

Local gun shops were another possibility, with a number of caveats. How long has the shop been in business? How long have I had a relationship with them? Will they assist in the physical transport? What are their consignment fees? How extensive is their customer base? How rapid is their turnover rate? Do they sell on the Internet?

Another good friend has been selling his guns on gunbroker.com for many years. I asked him how he goes about setting a viable price. He replied that he starts each gun out at a penny. We're talking about some fancy guns here, single-action Colts and the like. Apparently, it has worked out quite well for him over the years. I'm not sure that I'm that adventurous. Besides which, we're talking about more than 100 guns here. That's a hell of a lot of packing and shipping.

Fortunately, I had an ace in the hole. Several years ago, at a Shootists Holiday in Raton, New Mexico, I met Bobby Tyler (tylergunworks.com). I was quite

impressed with his work and, after getting to know him and his delightful family, even more impressed with him personally. His photo has graced the cover of a recent Brownell's catalog, and his business history is a true Horatio Alger rags-to-riches success story.* In addition to restorations and turning mundane firearms into works of art, Bobby will take your guns on consignment, or buy them outright, and resell them. I can vouch for his ability to find buyers for some real oddities, like my Bullard lever-action .50-95 Winchester buffalo rifle or Wildey semiauto pistol in .45 Super. I called Bobby and told him I had 100-plus guns for sale, and a couple of days later, at 0735 hours, he arrived at my door with his truck and trailer. We easily worked out a part consignment, part outright sale deal on the guns. Then we (mostly he) got all the guns packed and loaded into his trailer by 1145 hours, and he was on his way back to Friona, Texas. Within the week, I received a handsome check for those guns that Bobby bought outright. And in the weeks following, I've been receiving checks for individual guns on consignment, each one specifying which gun was sold. I will readily admit, there are a lot of those guns that have some personal history and I will genuinely miss them, but it's all for the best, and the money is always welcome.

*For a fascinating insight into Bobby Tyler's business operation and personal history, google "The Story of Bobby Tyler and What Makes His Casehardening so Special" by Mike Detty, in the June 18, 2019 issue of *Ballistic Magazine*.

BL 550[^]

Dillon's Basic Loader

\$299⁹⁹

P83-15399

Reloading Dies and Caliber Conversions sold separately

Pictured with optional accessories:
Strong Mount P83-22051 \$58.99

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of

versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers. The additional toolheads are \$27.99 each, or \$25.99 each if you

buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them. A powder measure adapter is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

AUTO PRIME SYSTEM[^] P83-16627 \$94.99

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. P83-20302 \$29.99

AUTO POWDER SYSTEM[^]

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency.

P83-20251 \$99.99

OPTIONAL MAGNUM RIFLE POWDER BAR

P83-21353 \$34.99

AUTO EJECT SYSTEM[^]

Greatly increases your ammo production capabilities and adds a Cartridge Chute/ Bracket and a Cartridge Bin to your reloader.

P83-22120 \$35.99

BL 550 POWDER DIE[^]

Extra powder dies for your BL 550 make it easier to set up additional toolheads for loading different calibers.

NEW!

If You want to Become a Gunsmith You need to read this book!

LEARN HOW YOU CAN BECOME A CERTIFIED GUNSMITH!

Becoming an American Gunsmith shows you a path to follow to become a Certified Professional Gunsmith, without having to give up your lifestyle, income, leave home, or spend tens of thousands of dollars attending a campus based school.

Mr. Kelly details how mastering the Design, Function, and Repair (DF&R) training concepts revealed in this book will enable you to maintain, repair, build, and customize firearms as a Certified Gunsmith.

This information will provide you with the ability to follow your passion of working on firearms and ensure your personal freedom and financial security. Included:

- How to set up your shop
- Numerous suggestions and resources to help you establish a *successful* gunsmithing shop.
- What tools and equipment are *really* necessary

Read this book and learn how you can be a Certified Gunsmith, protecting and participating in the ongoing history of firearms in America.

New Release Sale! Reg \$14.95 plus s/h

Dillon Reloading Accessories

A Strong Mount increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only mount raises the machine 6" above the bench top. All mounts come

with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 750/650	P83-22051	\$59.99
XL 750/650-only	P83-22052	57.99
"SDB"	P83-22223	72.99

Our Bullet Tray is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 750/650 when equipped with the RL 550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	P83-22214	\$47.99
1050 Tray Kit	P83-22215	47.99

The Low Powder Sensor provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	P83-16306	\$44.99
--	------------------	----------------

Our Toolholders are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

The **RF 100 Automatic Primer Filler**[^] eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run! In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you! The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$59.99 each.

Shellsorter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

RCBS Trim Pro-2TM Case Trimmer P83-43231 \$139.99

Lyman Products

Lyman's Precision Funnel Set is the ideal system for the serious reloader. The Precision Funnel Set is made to be completely static free, with a body of die-cast aluminum and precision-turned aluminum inserts. This is no "one size fits all" funnel; the Precision Funnel Set uses precision-machined, caliber-specific inserts to properly fit the case neck. The inserts can be quickly and easily installed by simply pushing them into place and then pulling them out when changing calibers. The Precision Funnel Set also comes with a padded storage case that neatly stores extra inserts when not in use. The set includes inserts for .22, .243/6mm, .25/6.5mm, .270/7mm, .30 and .338 caliber rifle cartridges.

P83-11389 \$39.99

The Lyman Scale Weight Check Set enables you to check/calibrate your scale using known weights. Weight Set .5 - 210.5 Gr.

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with

the axis of the case neck. By adjusting the plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

MY BLUE BENCH:

By John Kleespies

I purchased my first Dillon reloader, an RL 550B, a decade and a half ago. That old press has loaded countless rounds in 9mm, .38 Special, .357 Magnum, .223 Remington and .308 Winchester. It's still precise enough to produce benchrest quality ammunition that outperforms loads from a single-stage – see my **Blue Press** articles in the July and August 2020 editions for the data which proves that fact.

I soon became an avid United States Practical Shooting Association (USPSA) shooter, cranking out hundreds of rounds a month of .45 ACP for Single Stack competition and its required practice regimen. Unfortunately, my body and Run'n'Gun weren't exactly a match made in heaven, and so my USPSA monthly matches turned into the more stationary Steel Challenge Shooting Association (SCSA) competitions...and sometimes even state, regional, and world championship matches.

This switch from USPSA to SCSA came with the double blessing of less movement and more trigger time. This latter point, of course, meant more time cranking my 550's arm while simultaneously practicing its dance of advancing the plate, placing a bullet, and loading the brass. "The 550 hand tango" is perfectly fine for the casual shooter, but SCSA's ammo consumption rate ultimately gave my right arm – now suffering from a case of Shooter's Elbow – a workout that required upgrading to the XL 650.

One elbow surgery later (and a switch from .45 ACP to 9mm!) and I'm shooting faster than ever. In fact, I find myself wearing a team jersey these days, and even the venerable 650 is overtaxed with the appetite my guns require in multiple rifle and pistol SCSA divisions.

I can also now add into this a son who is starting to throw out some not-too-subtle hints about wanting to go to the range with me.

ENTER THE 1100!

Blessings, all... but I was beginning to demand more than my 650 ever promised to deliver.

Hence, I now find myself with the newest member of the Dillon family on my reloading bench: the RL 1100.

This thing is a monster! Other than the expected bolting-on of accessories and fine tuning of the dies, the 1100 essentially arrived set up. The hardest part was lifting it onto my bench. Before I knew it, a hundred test rounds were racked out both faster and easier than I'd ever thought possible. No longer having to push forward to set the primer is surprisingly welcome...but it isn't easy shaking loose 15 years' worth of forward lean built into my muscle memory. Thank goodness that handle is strong enough to take my weight pushing it in a direction it doesn't want to go! And, I have to say, the movement through that handle is remarkably smooth. Nonetheless, I did notice a little bit of a hesitation and a thunk on enough rounds to make me wonder what was up. A closer inspection showed me something that I never saw coming – primer pockets getting swaged in-process.

On a 9mm! Who'd of thunk, huh?

This swaging, combined with a "550 on steroids" style priming system, means that primer seating is a breeze with no cockeyed primers spotted during case gauging. In fact, the 1100 delivers the most consistent case-gauge results I've ever seen.

Throughout the years, I have learned a few tricks, though, and even this Cadillac saw some benefit. First off, in order to keep a sharp eye on powder levels, I cobbled together a lighting system from my soon-to-be neglected 650. This is more of a habit from the non-indexing 550 than a requirement – the Dillon powder measure is a robot! – but also to double-check for 9mm stepped cases that may have snuck their way into my brass hopper. Some artful application of duct tape around the top of the spent primer bin helped rein in maverick primers. Finally, a neodymium "rare earth" magnet stuck to the case tube clamp almost immediately captured a steel case disguised as brass. Dillon says that steel cases won't harm their carbide dies, but I still don't want any making their way into my sizer, thank you very much.

My reloading bench is looking pretty slick these days. Between the 550 and the 1100, a single-stage hangs out in case an odd job pops up. I keep my measuring and cleaning tools within arm's reach, along with a bucket of brass and scooper for easy refills of

the hopper. The RL 550B is more or less permanently set up with a large primer system for .45 ACP and .308 Winchester. Both use the same shellplate and buttons, so despite the huge difference in these two chamberings, with the pre-set tool heads ready to go, conversion on the RL 550B is a literally 30-second job. With my 1100 cranking out enough 9mm to keep me happy, I personally don't have a need for any more presses on my bench.

Of course, I really ought to dust off that old .357 Magnum revolver, so maybe a new RL 550C in small primer would be nice....

Ah, it never ends, does it?

"Big Fifty" [^]

STANDARD FEATURES:

- Made in the USA
- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2"-12 UNF Thread Dies
- Manual Shellplate indexing
- Average Loading Rate: 300 Rds./Hr.
- Loads High Volume/Match-Grade Ammo
- Milspec/Match-Grade Priming System
- Ductile Iron/Carbon Steel Construction

John Marshall on Classic Firearms:

Not many realize this today, but the first breechloader to be a standard United States military firearm was a novel flintlock rifle designed by John Hancock Hall during the 1811–1818 time period. Hall proved himself to be something of a mechanical genius. Although he was relatively unknown at 41 years old, after extensive testing his rifle was officially adopted by the U.S. Army in 1819 as the Model 1819 Hall breechloading rifle. It utilized a simple pivoting deep-bored breechblock at the rear of the barrel that could be tipped up, loaded with powder and ball, and then moved back down to align itself with the bore. No longer did the user have to stand up and be exposed to harm while loading the arm with a ramrod from the muzzle as had been the practice for centuries. While British captain Patrick Ferguson had invented and utilized a screw-action flintlock breechloader that was used against Americans in our Revolutionary War, few were made, fewer were used and still fewer exist today.

John Hall, born January 21, 1778, was pretty much a self-taught man with a keen interest in mechanical devices. Although there were tip-up breechloading firearms extant in Europe, Hall was unaware of them and developed his concept quite independently. He secured a patent for his design on May 21, 1811. William Thornton, then living in Washington, D.C., collaborated with Hall and made some small contributions to the basic idea. A joint patent with Thornton was then taken out covering the modifications. Hall described his invention in this manner:

“The barrel is in two pieces. That which forms the breech rises at its forend upon touching a spring or by any other method.... The charge is then put into the receiver – viz., the breech part of the gun – without a ramrod, taking care to press the ball or shot to the powder with the finger. With this construction of the gun it may be loaded in less time.... The ball goes with more certainty and force, because the chamber, being made where it receives a ball a little larger than other parts of the bore, admits with ease a ball which completely fills the barrel in front....”

Hall further stated that because of the ball's tight fit in the barrel, it should go with more force and in the process, scrub the barrel of fouling. He also noted that with this method, loading more than one charge in the barrel through the muzzle (often seen in the heat of

combat) would be impossible. This would provide more safety to the user.

The Hall rifle featured an ingenious locking system that prevented the recoil of the pivoting breechblock from impacting on its hinge. Behind both sides of the breechblock's two forward locking lugs, steel wedges (“keys”) were inserted that fit directly into recesses in the receiver. The locking lugs thus impacted only on the screw-stabilized wedges, which could be replaced with others of different sizes until the breechblock would be a very close fit to the barrel. While escaping powder gas at the breechblock/barrel juncture was an unwelcome nuisance (the same characteristic as is found on revolvers), the wedges provided a way to keep this problem to a minimum level. Unlike conventional side-mounted flintlock actions, the hammer, powder pan and frizzen were

located just right of center on the breechblock itself. This provided another advantage in that it made the stocks more solid and stronger than those that were routed and drilled for a side action. There was a built-up “fence” on the back of the pan which absorbed the excess energy of the hammer as it fell. The frizzen was provided with a spring which kept it securely

up or down when so moved. A feature far ahead of its time for a military arm was an adjusting screw on the trigger that permitted the trigger's sear interface with the hammer to be set exactly.

Inventors claiming “new and improved” devices had always been confronted with extreme skepticism by U.S. ordnance officials. Often their inventions failed to measure up in concept, performance and/or durability. There have always been a lot of half-baked ideas out there, and our military was usually right in doubting their practicality.

However, the Hall rifle was truly different and offered some real advantages. To load, the user pulled the hammer to half-cock, and then pulled the half-moon opening lever under the stock to the rear and up to lift the front of the breechblock for loading. The frizzen was manually snapped up and forward. A standard paper cartridge was ripped open with the teeth, and a small amount of its powder was shaken into the pan for priming. The frizzen was snapped shut and the remainder of the powder went into the hole in the breechblock. A lead ball was then shaken or ripped from the cartridge and pressed into the hole after the powder with the fingers. Sometimes the paper was also pressed in to keep

Hall Model 1819 flintlock with breechblock tilted open for loading.

The US Hall Breechloading Rifles & Carbines

everything positioned correctly. Then the breechblock was pushed down into position behind the bore of the barrel, the hammer brought to full cock, and the arm was ready to fire. All of this could be performed way faster than muzzle loading and could be done laying down rather than standing.

Hall did not have an easy job of selling his new and radical rifle to the U.S. Army's Ordnance Department, as it was a real change to the way things had always been done. Still, the new rifle's advantages were recognized in successful tests conducted in 1813 and 1815. One hundred rifles were ordered for field trials in January of 1817 at a cost of \$25 each. John Hall realized that some more developmental work had to be done. He asked to work at Harper's Ferry Armory to help perfect his design, and this request was granted. The first 100 rifles were tested and favorably received in March 1819, and Hall was given another order for an additional 100 rifles. In recognition of the care in manufacturing the Hall rifles would require, Hall's services at Harper's Ferry were secured as an assistant armorer at a salary of \$60 per month, plus a royalty of \$1 per accepted rifle. These were actually very generous terms at that time. His rifle was formally accepted as the Model of 1819. These had 32-3/4 inch barrels and bore diameters were fixed at .515 caliber. Overall length was 52.5 inches, and the average weight was 10.25 pounds. The muzzle was bored out smooth to a depth of 1-1/2 inches to facilitate muzzle loading in an emergency. The barrels and barrel bands were coated with a special brown protective lacquer.

Developmental work and tooling were finalized in 1823 at Harper's Ferry. Production started in that year with 23 rifles being produced. This increased to 980 in 1824. Accurate dimensions were mandatory on these rifles, and a substantial amount of standardization and interchangeability was achieved. Production was humming in the late 1820s and the demand for Hall rifles in the American Army was increasing. The militia also needed them, and the Ordnance Department entered into a contract with Simeon North of Middletown, Connecticut on December 15, 1828 to manufacture 5,000 rifles for a price of \$17.50 each, including all necessary accessories. A rate of 1,000 rifles per year was specified. North received additional contracts in 1829 and on through the early 1840s.

In deference to the mounted Cavalry troops, a percussion Hall carbine was designed. This was to be the Hall carbine, Model of 1833. It had the distinction of becoming the first percussion-fired official United States firearm. It had an overall length of 45 inches, a barrel length of slightly more than 26 inches, and a weight of about 8-1/4 pounds. These were equipped with a rod bayonet with a triangular cross-section, which could also be used as a cleaning rod. Troops in the field had often complained about the underside opening lever digging into their shoulders when the arms were carried there. Accordingly, the lever on these was on the right side of the arm and was pressed down to tip the breechblock up. Both rifled and .69 caliber smoothbore versions were made by North. The breechblock, hammer, latch plate and latch lever were all case hardened, as

were similar components on the flintlock models. The barrel and barrel bands were finished in a brown lacquer, the same as on the rifles. There was a trapdoor in the buttplate, covering a cavity in the stock for storing tools.

These percussion carbines enabled an interesting practice. The breechblock assembly could be

removed, yielding what in effect was a makeshift pistol that could be carried easily by the soldier for personal protection. Although there was no barrel, the ball could still be propelled from the separated breechblock with a startling bang.

A succession of carbines was to follow, the models of 1836, 1838, 1840 and 1843. These differed in some respects, but always maintained the unique Hall action. Many original rifles were later converted to percussion ignition to match the operation of the carbines. These conversions can be identified by the notable "fence" (part of the original powder pan) to the rear of the percussion cone.

In usage, the Hall rifles and carbines were about as good as they could get for breechloading powder and ball firearms. The unavoidable leakage of gases in front of the user's face in firing was a source of some annoyance, partially controlled by strict manufacturing tolerances, but worth it to get the convenience and rapidity of fire that the Halls offered. Self-contained metallic cartridges spelled the end of the Hall firearms, but in their day, they were treasured and widely used by our armed forces. They are all classic milestones in the history of our military weapons.

Double Duty TDU®

Trainer

Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. *According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.*

ODIN Ready Bag

ODIN Works introduces the new ODIN Ready Bag[®] (ORB)

featuring multiple pockets and pouches for mags, small gear, a clip for your keys, a water bladder pouch, and soft dividers inside to take down and pack your AR-15 while keeping parts safe and separated. For those builds with longer barrels, there is an extendable pouch at the top to ensure that any rifle will fit and be carried with ease.

Whether you're going to the range, out on a hunting trip, or just hiking through the woods, packing your gear has never been easier!

- Quick-release compression straps
- Four D-ring attachment points
- Key clip
- Loop and hook fasteners
- MOLLE fasteners
- Reinforced handles
- Two water-bottle pockets
- Ambidextrous shoulder strap
- Locking buckle
- Dividing panels that separate an AR upper and lower
- Water-bladder pouch and hole for hose
- Pocket extender: Can remain in bag as a pocket or extend up through the zipper to fit longer barrels
- Available in black or coyote brown
- Dimensions: 28" x 7" x 6"

Great Pistol Shooting Made Simple by Duane Thomas

Reviewed by Massad Ayooob

In my youth, I read a book by a great handgunner with a foreword written by a national champion. The champ said that author's book was like pemmican – compact, but meaty with lots of nutritional value. The same description would fit *Great Pistol Shooting Made Simple* by Duane Thomas.

I've known Duane for many years. I first met him when he took one of my classes, and then another. In the course of those 80 or so hours he impressed me in a lot of ways. He was a helluva good shot. He paid attention to how and why each technique was developed and folded it in with knowledge gained from many other instructors. He has taken that same approach to this book.

I've enjoyed Duane's writing over the years. When he offered a suggestion, he explained why. When he liked or disliked a feature of this or that firearm he was testing, he explained why. That approach also informs his short and very useful new book.

His intent is to give a new shooter, or a shooter who has been at it for a while and wants to get better, a good handle on basic two-handed stand up on your hind legs shooting, with emphasis on good hits at speed. All his set of recommended techniques can be seen demonstrated by current national and world shooting champions. He starts off with an explanation of what he does not cover in this particular tome.

Duane writes, "In this book we will not be discussing administrative skills like loading and unloading the gun, and how to check whether or not it's loaded or unloaded. We will not be discussing gun-handling skills like the draw or various sorts of reloading techniques. We will not be discussing how to shoot while moving, one hand only shooting, ready positions, shooting from a retention position, malfunction clearance drills, etc. All that 'extra' stuff. While those are important skills, and they're things a truly well-rounded shooter should know how to do, in this book we're only going to discuss shooting from the freestyle platform. In other words, standing upright, with the gun at eye level, aiming using the sights, with both hands on the gun. That really is the core of shooting."

Here and there, Duane offers options. For example, when discussing trigger control he explains the three basic methods. These are the controlled trigger slap that

he calls "trigger tap," the reset technique commonly called "riding the link," and the smooth stroke and reset he calls "the metronome."

Overall, though, the book is short and sweet and focuses on a single two-hand standing method with a straight thumbs/wraparound/high hand hold, body weight forward, and a grasp with the heels of the hands pressing toward each other isometrically. He wants your arms flexed at the elbows in what he calls "the unbendable arm," which he tells you in depth how to achieve.

Why short and sweet? Because it gives one solid set of valid techniques, a good structure for anyone's core system and particularly useful for those early in their handgunning career. Duane observes, "I am well aware the vast majority of people don't want to spend huge amounts of time reinventing the wheel. Nor do they want to read an encyclopedia discussing every teeny-tiny facet of how to shoot a handgun fast and well. They just want someone, who already knows how to do all this stuff, to tell them what works, in a short, simple, easy to understand fashion, so they can get started using solid technique."

None of this is to say that Thomas' latest is just a beginner's book. It's certainly an excellent choice for the person getting started

once they have their basic safety and manipulation nailed down. But at the same time, it has value all the way up to those who train. The instructor can see reading *Great Pistol Shooting Made Simple* as a busman's holiday, a taste of how another experienced instructor put together a useful curriculum.

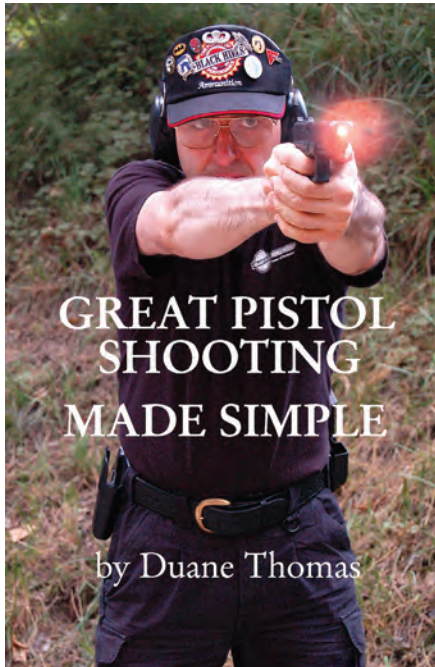

If you're a seasoned combat handgunner, you may not agree with everything Duane says. Hell, I don't either. But no two of us who've been in this game a long time are going to agree on every subtlety. Habituation comes into it, and so does something as simple as a competitor's needs versus a pistol packer's needs, or the new shooter looking for basics vis-à-vis the advanced practitioner. That said, though, Duane makes a strong and articulate explanation for every suggestion he offers therein.

Overall, I enjoyed *Great Pistol Shooting Made Simple*. For the price of a sawbuck, I think it's a damn good value.

Available for \$9.99 per PDF download at Self-Defense-Handguns.com.

HYSKORE

Six-Gun Modular Pistol Rack

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The rack will hold six pistols with either single-stack or double-stack magazines, and can be disassembled and reconfigured to hold guns with wider or narrower grips. The modular feature of the rack also means that two or more racks can be connected together and reconfigured not only to give each gun its own "special home," but also to take maximum advantage of all available space in your safe or vault. This is easy to do using 3/16" threaded rod, washers, and hex nuts available from any home-improvement store. The rack measures 11-1/4" wide x 7-1/2" deep x 6" high.

KCI USA Magazines

KCI USA Lifetime Warranty

KCI USA products are built to withstand a lifetime of hard use. KCI USA offers a lifetime warranty on manufacturers defects on all KCI USA products. This warranty covers all products manufactured by KCI USA.

Designed to fit AK-47-style rifles chambered in 7.62x39, these KCI USA magazines provide reliability and smooth feeding. Constructed of steel with an electroplated finish, these magazines will withstand the toughest corrosive environments. A high-tensile compression spring, anti-tilt follower and reinforced feed lips provide reliable feeding and long life. A ribbed exterior and a prominent dorsal spine provide a positive grip for precise manipulations.

**AK-47-Style
20-Rd. Mag.
P83-29832 \$9.99**

Like all KCI USA magazines, these standard capacity 30-round M1 Carbine magazines are constructed of steel with an electroplated finish. A high-tensile compression spring and a bolt-hold-open follower provide reliable feeding and long life. Removable steel baseplates allow for easy maintenance.

Refining the 7.62x39 Avtomat Czech Small Arms vz. 58 Rifle Family

By **Oleg Volk**

After World War II, only one Warsaw Pact country, Czechoslovakia, got to retain its original rifle design. The seminal STG44 got phased out of East German use, and the quirky Hungarian 43M submachine gun likewise disappeared from use, but the Samopal vz. 58 in Czechoslovak army outlived the USSR itself. A small element in its survival was the use of the standard Soviet 7.62x39mm cartridge, but the main reason for the retention of this distinctive weapon was its excellence.

The term Samopal is used to denote submachine guns, as vz. 58 was classified despite using intermediate rifle ammunition. Lightweight, handy and capable of controlled automatic fire, this gun filled two niches, that of the SA24/25/26 7.62x25mm submachine guns and of the 7.62x45 vz. 52 rifle. Visually similar to the AK47 to the point that it was used as a stand-in at the end of the film "Full Metal Jacket," vz. 58 is as different as can be internally.

The vz. 58 receiver is machined aluminum rather than stamped steel. The lockup is with a tilting locking block engaging raceways inside the receiver, compared to the two-lug rotating bolt locking into the barrel extension. The separate locking block resembled the Walther P38 and Beretta 92 actions more than it does most rifles. While both rifles use curved 30-round magazines, the Czech aluminum mags weigh a fraction of the steel Soviet mags. The rotary fire selector with Safe-Single-Auto positions is much handier than the clunky and noisy AK47 stamped lever. The short stroke gas system features much smaller reciprocating mass than the massive one-piece long-stroke

bolt carrier and piston conglomeration of the AK. Folding stock goes to the side rather than under, providing a sturdier result than the AK rip-off of the MP40 design. vz. 58 is striker fired, with an effective drop safety, while AK uses a hammer-fired free-floating pin. vz. 58 bolt locks back on the last round, the AK doesn't. Overall, vz. 58 is a pound lighter than the AK in similar configuration but has similar accuracy in semi and auto modes. AK47 has slightly better sealing of the receiver against dirt, also increased heat endurance thanks to the heavier barrel. On the flip-side, vz. 58 rock and lock magazine is much easier to attach than with the AK. Short-stroke gas system is chrome plated and runs very clean.

In its heyday, from the late 1950s to 2011, Czechoslovakia and its successor Czech Republic designed a wide variety of specialty models based on the basic weapon, fielding some of them in the many regional conflicts supported by the ComBloc or joined by institutional buyers – in the end, some version of vz. 58 was either adopted or received as military aid by about 20 countries. Over 900,000 vz. 58 rifles were produced. As the military use started to wane, the civilian sales picked up. Several companies made variations on the theme, with Czech Small Arms making the largest number of models of the best specifications.

Originally, CSA imported the basic "infantry" model with resin-impregnated wood furniture, as well as a folding stock variant. Those guns relied heavily on milspec parts and functioned as well as could be expected from ComBloc government issue: reliably and with indifferent accuracy. The thin chrome-lined

The machined aluminum receiver is more rigid yet lighter than the stamped and riveted AKM receiver.

barrels gave 4 to 5 MOA with good ammunition. For a submachine gun, that is respectable. For a semiautomatic rifle for the American audience, not ideal. The fast and easy handling, light weight and low felt recoil kept these rifles popular anyway. Even without the automatic model, vz. 58 Classic had limited heat endurance, so CSA added a tactical model with a collapsible polymer stock, railed forend and a muzzle brake. Already suppressor-friendly, vz. 58 Tactical became a much better silencer host with the ability to add a vertical foregrip, and with improved barrel ventilation. That design was just a little clunky, so the maker upped the ante with an all-new series of rifles imported in the last several years.

Visually similar to the original, the current vz. 58 Classic uses a precision Lothar Walther barrel. That turns it into a 2 MOA rifle, suddenly much more effective at a distance. For people who don't mind a little more weight to gain higher performance, the Elite model married Magpul Zhukov furniture with heat-shielded forend with a slightly heavier barrel. The result was the same 2 MOA with the heat endurance improving on the AKM. The new Tactical uses a simpler polymer forend and a telestock. All those guns may be fed with the original aluminum or the updated transparent polymer 30-round magazines. Liberty model gives the residents of occupied California a chance to own a vz. 58 too. While all bolt carriers have a stripper clip guide for topping off 30-round magazines with stripper clips, this one combines it with a fixed 10-round box magazine. Shorter versions, with 12" and just under 8" barrels, are available as pistols with and without braces. 7.62x39, especially with

soft point loads, retains usable ballistics from shorter tubes. All of these have threaded barrels with detented flash hiders or brakes: switching the muzzle device can be without tools done in seconds.

In recognition of the logistical realities of the United States, a 5.56x45mm Tactical variant is also offered. It may be used with transparent 30-round 5.56mm rock and lock magazines, or with the standard AR magazines inserted straight into a pinned-on magazine well. I prefer the native magazines, but the logistics argue for using STANAG. Like the improved 7.62 models, the 5.56mm version shoots 2MOA or better. The barrel stays cool longer too. The smaller-caliber guns are also available as pistols.

With the leaf and post iron sights optimistically graduated out to 800m, these guns really come into their own with the side-rail-mounted optics. The irons are good to about 200 yards on point targets. To fit the optional left-side base built into the receiver, CSA and RS Regulate both offer QD optic mounts in low and high configurations, the latter allowing the simultaneous use of irons under the optic. Quality low-profile BDC optics like the 2x conventional and 3x prism illuminated scopes from Primary Arms extend the effective range out to about 400 yards. Good triggers and low felt recoil make vz. 58 easy to shoot accurately.

Besides being a competent police and military weapon, vz. 58 works well as a self-defense rifle. The lighter classic model can be effectively fired one-handed if necessary. The dainty weight and neutral balance particularly favor the average female shooter with less reach and upper body strength than the typical male marksman. I've observed five-foot, 100-pound women

and 10-year-old boys run vz. 58 with ease. Depending on the version, the gun can be had with a left or a right-side charging handle. Thanks to the sheer number of these guns in the US, the market for accessories has arisen. Such things as recoil-reducing stocks – though the regular kick is already extra-mild – have become available. Magazines are often available for lower

prices than for the AK. Unlike the AK market, which turned from the inexpensive and highly variable surplus to the more costly domestic clones of equally variable quality, vz. 58s have always had the traditional Czech craftsmanship behind them, further improved by ongoing CSA research and development efforts. It's a system with a good future.

Fed from stripper clips into a fixed single-row 10-round magazine, the Liberty model gives useful firepower to California residents. The Elite model is the same, but with detachable 30-round magazines.

The 5.56mm vz. 58 variant can use "rock and lock" factory magazines or aluminum mil-spec USGI M16/AR-15 magazines with a magazine-well adapter.

Real Avid Level-Right™ PRO

A level reticle is critical to long-range accuracy. For longer shots a canted reticle will pull or push a bullet's trajectory off of vertical center. It gets worse the more the distance increases. A level scope means that

the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO changes all that by simplifying scope alignment in four easy steps. Accurate and intuitive, this timesaving instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy. Level-Right PRO **P83-21777 \$69.99**

The HMB Bolt

Young Manufacturing is the licensed manufacturer of the HMB bolt. The HMB Bolt by HM Defense eliminates the pass-through cam-pin hole and replaces it with a cam-pin socket and radiused cam-pin design. The new patented design eliminates the natural weak point of Mil-Spec bolts by significantly increasing the amount of metal (and strength) at the cam-pin location. The result: **NO MORE BROKEN BOLTS!** The HMB Bolt also reduces contact between cam pin and firing pin, enabling smoother operation of the firing pin, bolt lugs and aft gas rings. The new cam-pin socket also retains lubrication for extended operations. Comes with a phosphate cam pin. HMB Bolt **P83-66680 \$99.99**

Young Manufacturing's **Upper Receiver Vise** holds any AR15 upper receiver regardless of the manufacturer. Since it supports the receiver from the inside, the outside dimensions are of no concern. Made from aircraft-grade 6061 T6 aluminum and anodized to MIL-A-8625 Type 3 Class 2. Upper Receiver Vise **P83-66679 \$34.99**

This tool makes it simple to remove or install a new ejector and spring into the AR-15 bolt. Anyone who has tried to do this without a tool will be amazed at the reduction in the number of cuss words needed to perform the task. Comes with alignment and roll pin punch. The Master Bench Block™ is the most comprehensive AR15 bench block ever! It allows you to tap 13 critical pins from 5 different components. The block is wrapped in an over-molding that grips to your bench to prevent slippage.

P83-29033 \$34.99

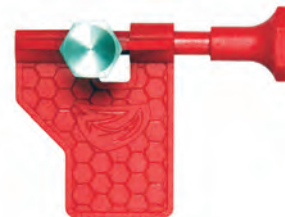

This advanced kit includes every standard and roll pin punch needed to build or work on an AR15.

P83-29032 \$39.99

The Chamber Boss –AR15™ All-In-One AR15 Chamber Cleaning Kit. Every tool you need to easily eliminate baked-on carbon from the AR15 chamber.

P83-21778 \$29.99

Installing a pivot pin is a small step that can quickly become a giant pain in the neck. Meet the AR15 Pivot Pin Tool – the one tool guaranteed to take the nail biting, pin-launching task of installing a pivot pin and turn it into something you might actually look forward to. Align the guide, insert the spring and detent pin, slide the pivot pin into place. Click. Snap. Done.

P83-29034 \$9.99

Carbon Boss™ – AR15. This is the most comprehensive carbon removal multi-tool ever built. Extremely versatile, it has 12 precision surfaces to clean the most critical parts of your bolt, bolt carrier, cam pin, and firing pin. It's the enemy of your AR15's worst enemy.

P83-29039 \$29.99

The unique Accu-Grip™ Picks and Brushes get the job done, feel good in your hand, and won't scratch your firearm.

Eight profiles dig gunk out of the places that even the sun don't shine. They're tough on the crud but tender on the metal. A better designed, better built detailing kit that just might make your dentist jealous.

P83-29036 \$9.99

The AR15 Brush Combo™ contains the critical components you need to keep your AR15 chamber and bore carbon free. It contains a star chamber brush and star chamber mop for cleaning inside the hard to reach star chamber. Star chamber pads help collect left-over carbon while applying the perfect amount of oil or solvent. The .223/5.56mm bore brush scrubs baked on carbon from lands and grooves.

P83-29037 \$9.99

There's no easy way to scrape carbon out of the star chamber of an AR15 unless you're a surgeon. That's why you use a star chamber brush to loosen the carbon then remove it with these star chamber cleaning pads. Done deal. Now get back to shooting. 20 wool chamber pads per package.

P83-29038 \$12.99

Real Avid Smart TORQ™

The most precise and technically advanced torque driver for guns. Specifically developed for optics mounting and gun builds. Discrete inch-pound-increment settings provide spot-on torque adjustments. Comfortable ergonomic grip with Force Assist makes tool manipulation a breeze. The functionally intuitive torque setting with visual, tactile and audible feedback provides confident assurance. To get you started, Smart Torq comes with 12 of the most commonly used gun bits. Never over-torque a scope ring again!

P83-21776 \$79.99

Gun-tips® Extended Reach Firearm Cleaning Swabs by Swab-its® revolutionize the way you clean your gun. The foam tips are lint free, reusable and ideal for cleaning trigger assemblies, slide rails, springs, extractors and anywhere else space is tight. 24 per package.

P83-12583 \$9.99

The **HYSKORE Degreezer**

consists of a 12" x 6" x 4-1/2" polypropylene tray with an angled drainage surface and a well with a perforated basket for holding and draining small parts. The set also includes a standard double-end nylon gun-cleaning brush. Small parts and even complete trigger groups and bolt assemblies can be placed in the basket and the well filled with solvent to cover the parts and left to soak for extended periods. Then the basket can be withdrawn, draining all the parts. The set includes a cover with an integral holder for the brush. This means the solvent that has been contaminated by the cleaning process can be left in the well of the Degreezer (rather than returned to the bottle) with the cover in place so that it's ready to be used for the next cleaning event. The tray, cover, and basket are made from polypropylene plastic. This has been proven to be impervious to all popular commercial cleaning solutions. It will also resist kerosene, acetone, and gasoline.

Slip 2000 Products

725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE:** To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. P83-19237 \$21.99

Slip 2000 Carbon Killer

provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE:** Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

16 Oz. P83-19234 \$21.99

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

P83-11652 \$25.99

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

P83-11676 \$19.99

Slip 2000 **Extreme Weapons Lubricant (EWL)** was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. P83-11644 \$18.99

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. P83-11645 \$18.99

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE:** It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. P83-11646 \$11.99

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack P83-11674 \$14.99

MIL-COMM Extreme Performance Lubricants

TW25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

0.5 Oz. Syringe
1.5 Ounces

P83-15732 \$12.99
P83-15731 17.99

66 Blue Press

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it. Slide-Glide Standard is for use in warm weather (F60+), Lite is a thinner viscosity for lower temperatures (F30+).

Slide-Glide Standard
Slide-Glide Lite

P83-15571 \$7.99
P83-15572 7.99

Sweet's 7.62

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

How to Ruin a Range Trip

By Clayton Walker

As a baseball fan, I'm always amazed by how many players entered the game thanks to the humblest of beginnings: playing catch with their father in the backyard. How many generational talents came about as a result of crude, dirt drawn diamonds to teach kids the rules of the game? Or homerun sluggers who first acclimated to a loving parent's underhand pitches?

But you know what story I've never heard? The one where a player said he stuck with little league after his father threw a ninety-mile-an-hour fastball into his ribs. Or the star whose father forced him to play tee ball with a 54-ounce bat, because that's what they use in the majors. Now, can you

get results by being short-sighted, cruel, and abusive of another's trust? Sure, but it's hardly the way to bet.

Very often, semi-experienced shooters will be placed in the position of being amateur coaches to those who are completely new to shooting. This is an awesome opportunity – some might call it a privilege – to raise a new generation of people who may become die-hard enthusiasts and tireless supporters of the Second Amendment. Unfortunately, thanks to some combination of ineptitude, hard-headedness, and “common wisdom,” the efforts of the amateur coach too often result in generating more people who hate guns.

So, with that in mind, let me tell you some of the things I see others doing that invariably lead to a miserable time for everyone and can jeopardize the right to keep and bear arms for generations to come. Let's run through some of the most common scenarios that at best will end a trip early and at worst will end a trip in tears.

First, it astounds me to no end to see the number of presumably experienced shooters who feel the need to show off to the people they're trying to teach. (They probably know you can shoot, dude. That's why they asked you to take them.) Rather than cater to the needs of the newcomer, the lay coaches make the trip about them. You'll almost always see 12-gauge shotguns and .44 Magnums come out on these excursions, accompanied by phrases like, “Now this is a real man's gun,” or

“See if you can handle this kind of power.” Not only are the guns too much...that's the point.

Sometimes, the “too much gun” thing goes hand in hand with a range session being hijacked by the amateur coach as a means of spreading some variety of strange and overly aggressive range/survival philosophy. This is where you'll hear phrases like, “This gun is what she'll train with, since this gun is what she'd use if a bad guy comes through the door!” A Glock 23 with +P+ ammo is a superb self-defense tool for those who can run it well. Most new shooters will not. Nobody doubts the efficacy of the .357 Magnum as a fight stopper. I doubt the newcomer's ability to accurately place shots with it.

Leave the big stuff behind for a newcomer's first trip. Anything that might hurt or has a steep learning curve is too much, too soon.

Do also note that most people interested in trying out shooting are not looking to practice double-taps or prepare for some apocalyptic, “breakdown of society” scenario where they'll be fending off waves of armed bandits. Save the “them or you” rhetoric: most people who want you to take them shooting are interested in surveying what could potentially become a fun hobby. Even if they do want to build their self-

protection toolbox, the responsible and ethical thing to do is to refer them to actual experts who are as familiar with state law as they are with training people to “drop tangos.” You can make for a bad range session by instantly assuming that every novice wants to develop a skillset that is deliberately and explicitly lethal.

You can also lay the foundation for a crappy range trip through simple ignorance. Many shooters in 2020 still think that the smaller the gun, the better it will be for a newbie. Admittedly, some of this falls on the crappy marketing and product positioning of gun manufacturers as a whole, who for years labored to convince people that tiny, pink-gripped snub-nosed revolvers were an ideal choice for the woman who shoots little-to-never.

That mindset persists at my local range, where there's no end to the number of well-meaning dads, boyfriends, and husbands who put subcompact, polymer “cop guns” into the hands of young women who have never shot a gun before. If I had five bucks for every one of these novice shooters who immediately

A .22 revolver is a great teaching tool. If you don't have one, get one!

Don't assume all small guns are easy or comfortable guns to shoot.

It is imperative to correct anything that would lead to a painful or catastrophic error before you get to the range!

Think about quick encouragement. Easily resolved hits, good sights, and small calibers will always make for a winning combination.

start shaking in the arms as a result of experiencing amplified, uncomfortable recoil, I'd have enough for a new gun.

Obviously, a range trip will be crappy for new shooters who are set up for failure and flinch every round away from the target. The opposite of "beginner's luck" is taking stock of your first time out and saying, "Boy: I really suck." Those who struggle will quickly come to the conclusion that they are not good at shooting, and likely won't be motivated to persist. Frustration can be amplified when a coach provides absolutely no suggestions of how to, y'know, actually shoot better.

But while a missed target and deflated spirits are bad enough, they're always better than physical pain. Being punched in the shoulder by a battle rifle with a metal buttplate is not a newcomer's idea of fun. New shooters will not think it hilarious when they're injured due to improper technique, such as when they're "scope kissed" or cut by a reciprocating piece of metal. At least these injuries are minor.

I wish I could say the same about a local woman who encountered a range yahoo who simply put a .460 S&W in her hands and told her to "have fun." Well, she didn't. Her supporting hand crept too close to the cylinder gap and a massive jet of gas nearly severed her left thumb. There's someone who will never be swayed from the idea that all gun owners are irresponsible sadists.

And let's not forget that a bad coach might even lay

the groundwork for a fatal mistake. Every range trip should begin with a discussion of the "four rules," along with "dry" instruction of proper grip, stance, sight alignment, trigger discipline, and verifying whether a gun is loaded or unloaded. Without this foundation, a newcomer might muzzle-sweep another shooter and negligently discharge a firearm, thereby ruining countless lives – not just a range trip.

In closing, remember that if someone asks you to take them shooting or expresses interest in trying out a new activity, it's **not about you**. Your job is not to prepare them to protect the president from a gang of ninjas. Your job is not to bark platitudes of them and assess their readiness to water the tree of liberty with the blood of tyrants. Your job is to create an encouraging, illuminating, and **fun** first trip.

At a minimum, you may maximize your chances of running into another friendly face at the range. You may be the spark that brings thousands of dollars to your local ranges, gun stores, and other vendors of the firearms industry. And, at best, you may help to create a lifelong supporter of the Second Amendment who shows up at the polls to defend our rights.

All of that potential is part and parcel of a newcomer's first range trip. Consider what we all have to gain if it goes well for your son, daughter, friend, co-worker, girlfriend, boyfriend, wife, husband, mentee, etc. Please, please, please don't make a mess of it.

**The New
Super Vel.
Hotter.

Shoot Out Targets

The Alpha Target is Shoot Out Targets' Patent Pending instant-reaction target system that can be reused again and again to improve your marksmanship. All Shoot Out Targets are made of durable cardboard that has been tested to withstand 1000-plus shots. Unlike clay pigeons that can only be used once, the **Foam Medallions** are durable and able to self heal for longer-lasting use, allowing for up to 40-plus shots per medallion. Each foam medallion is 3" in diameter and 1/2" thick. With the easy-to-see foam medallions you will get an instant kinetic reaction with every hit. Shoot Out Targets are proudly made in the USA, reusable for hours of fun and can be used with all-caliber firearms and airguns. The target stands 43" tall and 22" wide when assembled.

Scout Scope Mounts

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle	P83-25374	\$79.99
Scout Scope Mount for SKS Rifle	P83-25373	78.99

The Altor Pistol

By J.B. Wood

Somewhere out there are a few people who have been reading my articles for the past 58 years. They will know that I'm mostly an auto-pistol person, with a few sidetracks for good revolvers. Sometimes, though, a handgun will appear that's just too interesting to pass up. The Altor is definitely in that category.

It's a single-shot, available in 9mm or .380 Auto. My first impression, examining my 9mm test gun, was that the machine work is awesome. The metal parts are stainless steel, and the gripframe is high-tech polymer. Also, after trying it out with some ordinary loads, I found that it works, every time.

With its unique trigger system, which we'll get to in a moment, formal target testing would be ridiculous. At a distance of a few yards, will it keep all hits in the vital areas of a combat-style cardboard target? Yes. Four in center of mass, and one in the "head." And, I wasn't using sights, just pointing it.

The Altor does have sights, fixed, square-picture, on the top of the polymer gripframe, 2.5 inches apart. They can be used if you practice a bit with the trigger system. It can be called, "double action," but that's not exactly right. As the trigger is pulled rearward, cocking the striker, an angle of the gripframe nudges your finger off, letting the striker go forward to fire.

I know this seems a little strange, but after you play around with it a while, you learn how to let the finger go without affecting the aim. The trigger is also the latch for barrel removal, but no worries there, as the barrel has to be turned a good distance to free its mounting lugs.

The Altor has two separate safety systems. At the front

of the gripframe on the left side there are marks on the barrel and frame that you align to block the striker. Farther back, in the "trigger bevel," there is a cross-bolt safety button that blocks trigger movement. Apply both of these, and there's no chance of accidental firing.

Loading the Altor is easy. You depress the trigger a little and turn the barrel to the right (rear view) until it stops. Take it off toward the front. In the gripframe, the now exposed breechface has a finely machined recess to fit the rim of your "rimless" round.

Now, you simply put the barrel unit back onto the gripframe. You can't do it wrong – the barrel unit is marked in big letters, "TOP." After loading, be sure to set the safety systems – especially the front one – that retracts and blocks the striker.

The empty weight of the Altor is 10.7 ounces. The other numbers: Overall length is 6.75 inches, height is 3.75 inches. Barrel length, measured from the breechface, is 2.25 inches. Width is 1.10 inch. With a pistol this light, expect some pronounced felt recoil, even with ordinary loads. In self-defense usage, you won't notice it. For practice firing, wear a glove.

In its role as an ultimate back-up piece, there are several carrying options. If you just put it through a belt, there's a little finger tab on the front of the grip that keeps it from slipping forward. Or, any handy pocket will do. Best of all would be a small loop inside the top of a boot. For this high-quality product, the MSRP figures may amaze you: \$129 for the 9mm and \$119 for the .380!

The Standard S333 Revolver

By J.B. Wood

I thought the Altor pistol was weird, but this one goes beyond it. How about a revolver with two barrels, side-by-side, that fires two .22 Magnum rounds with each pull of the trigger? It's the S333 from Standard Mfg. Co., and it was surprising in several ways. As a personal-defense piece, it turned out to have several advantages.

For the stress of rotating the cylinder and cocking and releasing the internal double hammer, there is a long trigger with two finger positions. The upper one has one of those silly "flipper" safety levers. We can forgive them for that, everybody's doing it. The polymer gripframe is shaped well, with deep finger recesses.

Because of the long trigger, you have to learn how to place the fingers for a proper hold. This is made easier by the fact that the .22 Magnum, even two at once, will have practically no felt recoil. With that factor removed, you can concentrate on keeping the lower finger clear of the trigger.

The frame is high-tech alloy, and the one-piece grip is polymer. Everything else is good steel. It's medium sized. These figures are mine, so there may be a little variation from factory specs. Weight empty is 23 ounces. Length from muzzle to back of frame is 4.8 inches, or, if you add the butt projection, 5.5 inches.

It's widest at the cylinder, of course, 1.18 inches. The barrels measure 1.40 inches, and the cylinder holds eight rounds. You've already done the math – this gives you four shots. In a serious situation, with penetration qualities of the .22 Magnum, this should be quite adequate.

In the unlikely event that they are ever needed, there are good sights, part of the frame on top. Square picture, with three shiny red dots that are very visible. I

used the sights when I test fired the S333, the distance being about five yards. Every time, it put the little two-shot "group" near the center of the 8-inch bull, just a little above it. Spacing was an inch to a half inch.

On several targets, I noticed that one of the rounds went straight in, and the other was "tumbling." A shaving at the barrel entry? Nope. Absolutely clean, a perfect alignment. So, what could be causing it? I have a weird theory.

The bullets emerge from the barrel side-by-side. Could the rotation of one affect the other? I will defer the answer to the high-tech ballistic guys. I'm definitely not in that category. The important thing is, it does not affect

close-range accuracy. Those little "groups" were consistently near the center of the target.

As most of you will know, the .22 Magnum is made in rifle and handgun versions. The rifle load, used in a handgun, will result in an awesome muzzle flash and slight decrease in velocity. For the test firing, I was using the Speer Gold Dot load, marked "short barrel-personal protection."

The advertisements that I've

seen refer to this unique revolver as the "S333," but the gun itself, and its box, are marked "Thunderstruck." By whatever name, the gun is beautifully made and functions exactly as intended. The MSRP is \$429, and (under normal circumstances) might be a little less out there in the market. And, you get to see the machining wizardry that will align two chambers and two barrels with each turn of the cylinder.

New Products from

Like pretty much everything from Berry's Manufacturing, this 9" x 12" x 10" deep stackable utility box is made in America and covered by a lifetime warranty. *This one happens to be filled with once-fired, processed (polished, sized, deprimed, primer pockets swaged) 9mm cartridge cases (sold separately when available) prepared at Dillon Precision on our new CP 2000 Case-Processing Machine.* The box is designed to stack and is great for storing bulky items. If your gun room/garage looks anything like ours, these will help you get organized. So, whether you're looking to store shooting accessories, ammo components, or car parts (we have more than our share of all of the above) these boxes are ideal. The best part is that they're transparent, so when you fill them, you don't have to open the **WHOLE** stack to find what you're looking for.

Stackable Utility Box P83-40194 \$13.99

Berry's Powder Funnel Set provides a wide range of flexibility when it comes to reloading. The two-funnel set comes with inserts that allow loading calibers from .17 to .50 caliber. Constructed of tough translucent polycarbonate material, they are covered by a lifetime warranty and made in the USA.

Powder Funnel Set P83-40191 \$6.99

Berry's Pistol Cases are as tough as they look. Available in a desert tan color, they're injection molded out of high-impact polypropylene and contain high-density crate foam to provide a soft, protected bed for your firearm investment. They're TSA approved when appropriate locks are added. Available as a single-pistol or double-pistol case, they carry a lifetime warranty and are made in the USA.

Individual First Aid Kits From The Tactical Medic

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why we're offering individual first aid kits from The Tactical Medic. The Econo-IFAK contains a 4" Emergency Bandage, a TK-4 Combat Tourniquet, 1 Package of Rolled Gauze, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves. The Micro Kit #2 contains a 4" Pressure Bandage, 1 Package of Quick Clot Gauze, a TK-4 Combat Tourniquet, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves.

Blue Press 81

kershaw® TRUST YOURSELF. TRUST YOUR TOOLS. BE READY FOR EVERYTHING.

From clearing brush to making kindling, the Camp 10 is the ideal outdoor and survival tool. Cut, slash, hack, split, scrape – just about any task you ask of it, the Camp 10 can handle. The full-tang Camp 10 is made of carbon tool steel for toughness and wear resistance. A basic black powdercoat protects the steel and makes maintenance easier. You'll like the secure, contoured grip of the Camp 10, too. The handle has a built-in hand guard and is drilled in both front and rear so you can attach a lanyard either place – or both – for carrying versatility.

Blade length: 10" Overall Length 16" Weight, with Sheath 1 lb. 8 oz.

P83-55012 \$80.99

Key chains just got even handier with the new Kershaw PT-2 key chain tool. It offers eight handy functions in a very compact space. The PT-2 (Pry Tool-2) comes in at less than an ounce as well and offers a bottle opener and cap lifter, a pry bar, two screwdriver tips, a wire scraper, and three sizes of hex drives.

Overall Length 3.25" Weight 0.8 oz.

P83-55013 \$11.99

This "XL" Kershaw-Emerson now comes with D2 blade steel. D2, a high-carbon, high-chromium tool steel, is a knifemaker favorite and offers good edge retention and hardness, as well as being more corrosion resistant than other high-carbon steels.

Blade length: 3.9" Closed: 5" Open: 9"

P83-11689 \$74.99

Kershaw Volt II opens one-handed and with an authoritative "twack" thanks to Kershaw's SpeedSafe® assisted opening system. A simple pull back on the flipper and the Volt II opens smoothly and easily.

Blade length: 3.25" Closed: 3.9" Open: 7.1"
