THE **RUGER**® LCR®

DOUBLE-ACTION REVOLVER:
EIGHT MODELS / FOUR CALIBERS

Packed with the latest technological advances and features required by today's most demanding shooters, the Ruger® LCR® is the evolution of the revolver. The Ruger® LCR® is a lightweight, small-frame revolver with a uniquely smooth trigger and highly manageable recoil. Available in eight models and four calibers, there is an LCR® for every need – from personal protection to low cost practice at the range.

Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

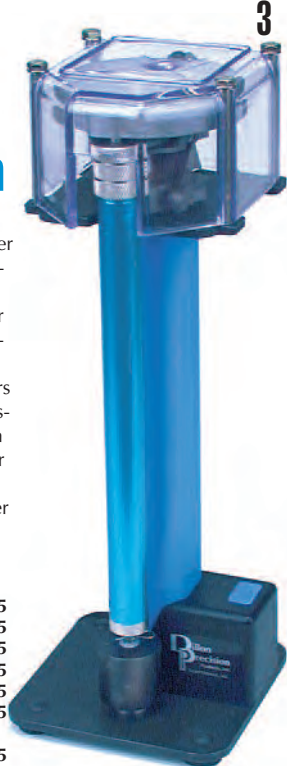

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

We READ Our Mail!

I read with interest the article "The Firearms Academy of Seattle's Speed Shooting Course" by Duane Thomas [June 2014 issue]. His quote, "We can become fast and accurate after we become fast first" seems to emphasize the difference between pistol shooting when I grew up and pistol shooting now. I did my pistol shooting (.22 rim-fire) slow, timed and rapid fire on a 50-foot NRA "bullseye" target (one handed). No "Zombie" targets then, LOL! That doesn't resemble what we have today. We learned sight picture and the ability to call our shots. Pistols were "sorta run of the mill." Centerfire was much the same with the well-heeled guys using Colt 1911 Gold Cups. The less fortunate used Smith Masterpieces. Today, competition seems to be an expensive young man's sport. Emphasis on speed. I can no longer compete at 86 years old, even with my Glock Model 35 as I can't run and walking isn't all that great either. Hell, I can hardly load my Glock magazines due to severe arthritis in my thumbs. I still enjoy shooting, but on my own terms and that's enough for me. It is amazing to me that today's shooters need all that "stuff" to compete. Nothing wrong with that, I guess, but way too expensive for me. However, I'm not a complete old fogey. My sons and I chipped in to buy a Dillon 550 press and THAT is one piece of gear that I wouldn't do without. The shooting sports have come a long way since I first rode – at 12 years of age – my bicycle out of the city to hunt squirrels with my Winchester Model 69 slung over my shoulder. Things were simpler AND cheaper then.

Wayne A. Doenges – New Haven, IN
Wayne, I think the real beauty of the shooting sports is that we can all enjoy shooting on our own terms.

I think a good article on classic handguns would be the Desert Eagle by Magnum Research. Also a cool cover for your magazine would be one of your models in an equestrian outfit with tall riding boots, etc. I think your catalogs are great and very informative, covering a wide array of subjects, firearms and products. Just wanted to say thanks for all your contributions.

David Woodard – cdwdwv96@yahoo.com

I just wanted to drop you a quick note to say how much I enjoy reading **The Blue Press**. It seems to get better with each issue. Keep up the good work, some of us really appreciate it. I know you take hits regarding the pretty young cover models but the comments are obviously from people that do not read past the cover. Anyway, thanks for making your catalog entertaining and informative.

John Albert – mr.john.albert@gmail.com

NEW

Which Dillon is Right

Square Deal "B"

Dillon's Square Deal "B" was designed to produce large amounts of ammunition in the least possible time for just a little bit of money. At 300 to 400 rounds per hour, you can produce enough ammo for several pistol matches or practice sessions in just a few hours.

See Page 8

RL 550B

More RL 550s have been sold than any other progressive machine in the world, and for good reason: The RL 550B's versatility is almost unlimited. It will load over 160 different rifle and pistol calibers. Its quick-change tool-head allows the user to change calibers without having to readjust dies.

See Page 14

XL 650

Dillon's XL 650 resulted from several years of listening to our customers expressing their fondest wishes. We took every good idea we and our customers ever had, tested them extensively, and then incorporated them all into the design of the XL 650.

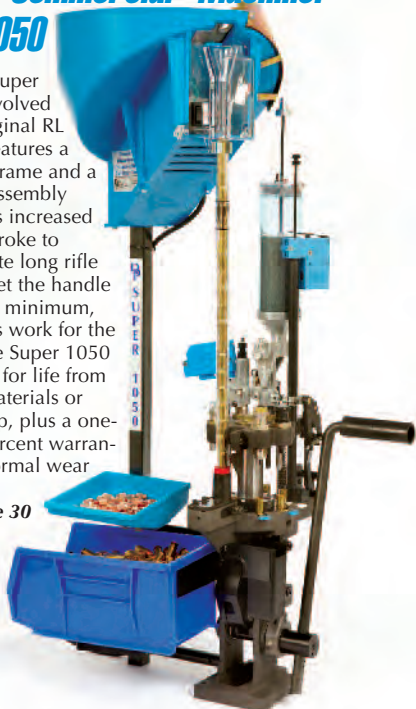

See Page 20

Dillon's "Commercial" Machine: Super 1050

Dillon's Super 1050 evolved from the original RL 1050, and features a lengthened frame and a new crank assembly that provides increased functional stroke to accommodate long rifle cartridges, yet the handle stroke is at a minimum, meaning less work for the operator. The Super 1050 is warranted for life from defects in materials or workmanship, plus a one-year, 100-percent warranty against normal wear and tear.

See Page 30

ht for YOU?

7

BL 550

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

See Page 13

RL 550B With Accessory Casefeeder

Adding an automatic casefeeder system to your RL 550B will easily increase your ammo production rate by 25 percent or MORE! The casefeeder streamlines the loading process by reducing hand movement, and the RL 550 Casefeeder uses time-tested, proven technology.

See Page 17

Dillon's "BFR" Big Fifty Reloader

You KNOW you want one! There's nothing quite as thrilling as touching off one of those .50 BMG cartridges and sending 750 grains of copper-jacketed lead downrange. WAY downrange! If the cost of loaded .50 BMG ammo has been putting you off, you no longer have an excuse.

Join the ranks of the LONG-range target shooters and roll your own .50 BMG (and other long-range, specialty cartridges) on Dillon's BFR.

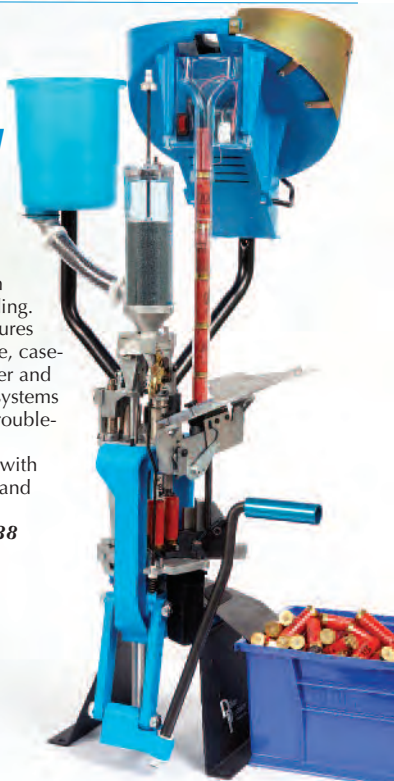

See Page 50

SL 900 Dillon's Shotshell Loader

Dillon's SL 900 is the new standard in shotshell reloading. The SL 900 features easily adjustable, case-activated powder and shot dispenser systems that eliminate troublesome bushing changes, along with spilled powder and shot.

Cowboy Up!

Traditions Rawhide 1873 .45 Colt Single Action Revolver

Reviewed by Peter Carolin

It's hard to think of anything more typically American than the Single Action Army revolver. Built for the U.S. Army, and enthusiastically adopted by cowboys, lawmen and outlaws alike, this legendary handgun and its .45 caliber cartridge are icons of the American West, both in reality and in cinematic fantasy.

Although the Single Action Army was a hardware store and mail order catalog staple throughout the late 19th and early 20th centuries, Colt discontinued its manufacture in the early 1940s, in order to fill War Department orders. After World War II, however, the popularity of TV westerns brought this old favorite back. With the advent of Cowboy Action Shooting in the 1980s, Colt's custom shop offered the original at a premium price, and other companies, both here and abroad, tooled up to satisfy the demand. The old hogleg was on a roll, and its fan base continues to grow.

Recently, I heard about a modern rendition of the Single Action that appeared to be closer to this revolver's roots as a working tool. Traditions Performance Firearms, of Old Saybrook, Connecticut, imports a basic Single-Action revolver, called the "Rawhide 1873." It's made in Italy by Pietta, and is available in 4-3/4", 5-1/2" and 7-1/2" barrel lengths. I happen to like the balance of a 4-3/4" model, so that's what I requested.

The first thing you'll notice about the Rawhide is the finish. It's an even matte black, the same finish you'd associate with those modern guns that are advertised as "tactical." Initially, it's a bit of a visual jolt, but it does tend to grow on you. The hammer, trigger and extractor rod have a shinier black finish. The grips are a nice walnut, and well fitted to the frame. The front of the cylinder is chamfered, so the gun slips easily into a holster. The fixed sights are, amazingly enough, a delight. Unlike most traditional Single-Action rear sights, this one is cut square on the bottom, with enough daylight on either side of the front sight for a quick, sharp sight picture.

The Rawhide has a transfer bar safety, which means it could be carried safely with six rounds in the cylinder. Being set in my ways, I habitually load just five rounds into a Single-Action cylinder, with the hammer down on the empty chamber. The instruction manual, interestingly enough, shows a traditional Single Action, with the firing pin on the hammer. Here, in the land of liability, we get the transfer bar and a frame-mounted, spring-loaded firing pin. A separate little brochure is supplied for this set-up.

At the range, I set my targets up at 15 yards, which is a bit farther out than your usual Single Action competition range. The ammunition I had available was CCI Blazer 200-grain JHP, Winchester Cowboy Action 250-grain Lead Flat Nose and Ultramax 250-grain Round Nose Flat Point. I deliberately did not opt for any +P or high-octane defense loads. This gun is ideal for Cowboy Action competition or casual shooting. If you want to go loaded for bear, I'd recommend Freedom Arms. I was quite impressed with the trigger pull on this revolver; it's consistently at 4 lbs., and very crisp and clean. As with most traditional Single Actions, the Rawhide has a high front sight, and the gun shoots quite low; you'll want to take a portable vise and a file with you on your first trip to the range. Offhand groups stayed in the 1-1/2" to 2-1/2" range. Recoil is about what you'd expect from a 2-lb., .45 Colt revolver, which is why I prefer a Bisley grip, but that's just me. Extraction was easy; empties either dropped out of the chambers or required just a light poke from the extractor rod.

The Traditions Rawhide revolver has an MSRP of \$455, but I've seen them offered for sale as low as \$358. For someone who wants to get into Cowboy Action competition at a price that won't break the bank, I'd put my money on the Traditions Rawhide 1873.

BL 550 Dillon's Basic Loader

\$259⁹⁵

K83-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount K83-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550Bs

AUTO PRIME SYSTEM

Includes:

One-Inch Bench Wrench	K83-10842	7.95
Square-Deal-Only Wrench	K83-19970	8.95

Dillon's Strong Mounts

increase your machine's "footprint" to over 10",

spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL550/XL650	K83-22051	\$48.95
XL650-only	K83-22052	45.95
Square Deal "B"	K83-22223	64.95

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550B and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL 1050.

Bullet Tray Kit	K83-22214	\$41.95
RL 1050 Tray Kit	K83-22215	41.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-thirds of a grain.

Magnum Powder System
K83-97126 \$142.95

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

K83-16306 \$41.95

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Alum. Roller	K83-17950	\$45.95

Dillon's Case Preparation Equipment

CV-2001
K83-20493
\$188.95

CV-750 K83-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator K83-20675 \$73.95

CM-500 Case/Media Separator K83-21045 \$46.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 K83-22047 \$213.95

Euro CV-750 K83-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls of the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **K83-13804** **\$8.95**
Case (20 pc.) **K83-20255** **135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **K83-13733** **\$8.95**
Case (20 pc.) **K83-20256** **135.95**

Half and Half 10 bottles of polish /10 of lube

Mernickle Holsters' Conceal-Carry Performance Series

If Cowboy Action Shooting is your I game, why not CARRY the gun you shoot the most? These holsters can be worn strong side, appendix carry or cross draw and are fully molded. Now also available for J-Frame S&Ws.
 4-3/4" SA Colts/clones **K83-11560**
 4-5/8" Ruger Blackhawk **K83-15765**
 Ruger LCR **K83-29030**

"Wild Bunch" 1911 Holster & Mag Pouch

This holster/mag pouch was designed in a joint effort by World Cowboy Action Shooting Champion Gene "Evil Roy" Pearcey and World Fast Draw Champion Bob Mernickle when SASS introduced the "Wild Bunch" category for Cowboy Action Shooting.

When these two champions put their heads together, they created a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame

away from your body so you'll get a full combat grip, and the holster includes the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport - and no more - so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

1911 Holster **K83-19947** \$139.95
 Mag Pouch **K83-19946** 44.95

Dillon's New Rapid Trim 1500 Case Trimmer 23

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (Vacuum cleaner and hose not included.) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer Assembly **K83-62164** is **\$327.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (Please see chart below). Replacement carbide cutting blades, **K83-13141**, are **\$19.95** each. Upper lock rings, **K83-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

The Safepacker

THE WILDERNESS' SAFEPACKER™ HOLSTER is the ONLY mode of concealed carry that I have personally witnessed save a man's life. It's a long story, but suffice it to say that the element of surprise afforded by the Safepacker did the trick. The folks at The Wilderness contend that the Safepacker™ is the best, most versatile and utilitarian holster in the world. I tend to agree, because the one you see pictured at left...is mine.

Mark Pixler, editor

The Safepacker can be hand carried like a day planner, equipped with a shoulder strap (not included), slipped into an attaché case, opened with the top flap stuffed between the mattress and box springs on your bed, strapped to a seatbelt, attached to a sun visor, clipped to a backpack, or worn on your hip as a very low-profile "un-holster."

- "Government Model" Safepacker, RH **K83-11703 \$89.95**
"Government Model" Fits: Colt Government Model, GLOCK 17/18/20/21/22, SIG P-220/226, Beretta 92/96, HK USP-45, 4" K-Frame, 3" N-Frame, etc.
- "Commander" Safepacker, RH **K83-11702 89.95**
"Commander" Fits: Colt Commander, SIG P-245/229, HK USP-45 Compact, Tokarev, etc.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. *Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.*

BLADE-TECH™

“Revolution” Holster Series

Blade-Tech used its extensive knowledge of Kydex® holstermaking to bring you the Revolution line of holsters. Using a proprietary blend of polymers, Blade-Tech has engineered these holsters to offer lifetime performance in a wide range of conditions. The holsters won't become soft in extreme temperatures (over 300° F) and won't become fragile in low temperatures.

Dillon's Pistol Die Sets

Size Die

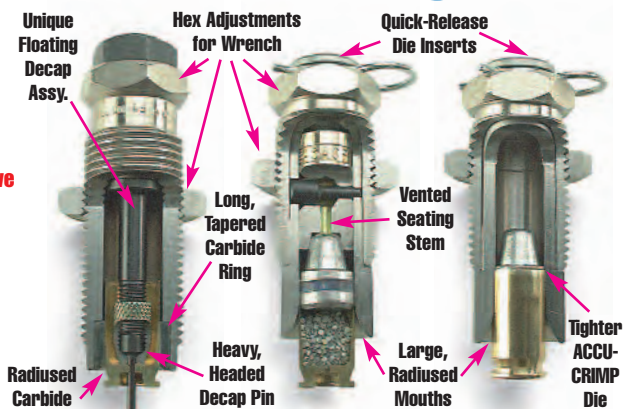

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Extra Loading Data Labels, K83-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use.

Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

TARAN TACTICAL INNOVATIONS

The TTI Benelli Extended AccuGuide Carrier is the first extended carrier ever manufactured from one solid piece of SAE 304 Stainless Steel, which eliminates the need for welding. It is heat-treated and polished, providing optimal performance. The Carrier features an extended guided rail on each side to assist in centering the round while reloading. It will provide you the speed and comfort of not having your thumb torn up after reloading. Compatible with: Benelli M1/M2/M3/SBE, Versamax.

D. Six-Shell Covered Tactical Stripper **K83-19225 33.95**
**Three-Shell Aluminum Stripper accommodates 2-3/4" shells only.*

AP Custom USA Shotshell Carriers/Caddies, Mag ID Kits

AP Custom USA's Shotshell Caddies are 100-percent machined from solid billet aluminum. The **4x4 Shotshell Caddy** holds four 2-3/4" 12 Ga. shells in two adjacent slots. The 4x4 is designed for loading four shells at once, either strong- or weak-handed. The **3x3 Shotshell Caddy** holds three 2-3/4" 12 Ga. shells in two adjacent slots.

The **QL/4 Shotshell Carrier** is a four-round 12 Ga. "quad-load" system consisting of a single QL shell carrier mounted to an adjustable billet aluminum backer plate on a Blade-Tech Tek-Lok. The QL/4 backer plate allows the shooter to adjust the angle of the QL to his or her liking. The backer plate is also drilled and tapped to accept Safariland ELS and Blade-Tech MOLLE attachments. The **QL/8 Shotshell Carrier** is an eight-round 12 Ga. "quad-load" system consisting of a two QL/4 shell carriers.

AP Custom USA's **Mag ID Kits** enable you to color code and number your P-Mags and pistol magazines.

TACCOM, LLC Tactical and Competition Accessories

TACCOM, LLC's Duaload Shotshell Holder is available in 2-, 4-, or 6-Shell versions and can be customized to carry your shotgun ammo in several configurations. The 2Up version can be either attached to a belt or MOLLE gear, and the 4Up and 6Up versions feature a **BLADETECH Tek-Lok™ Universal Belt Clip (included)** that can be attached at various angles. The Duaload allows you to grab two shotshells aligned in such a manner that it makes it easy to load two at a time into your shotgun.

2Up Belt/MOLLE	K83-19530	\$9.95
4Up w/Tek-Lok™	K83-19531	29.95
6Up w/Tek-Lok™	K83-19532	34.95

TACCOM, LLC's Quaload Shotshell Holder is a serious game changer! It's so radical that they're patenting the device. The Quaload holds the 2 columns of shells next to one another, you can't get any closer than having them touch. No other quad load device can do this! This allows for you to control how the shell come out of the holer and not have to worry about rim overlay...the rims are already overlapped in the correct position!

4Up Quaload Shotshell Holder	K83-19543	\$39.95
8Up Quaload Shotshell Holder	K83-19544	69.95

CLASSIC FIREARMS: The So

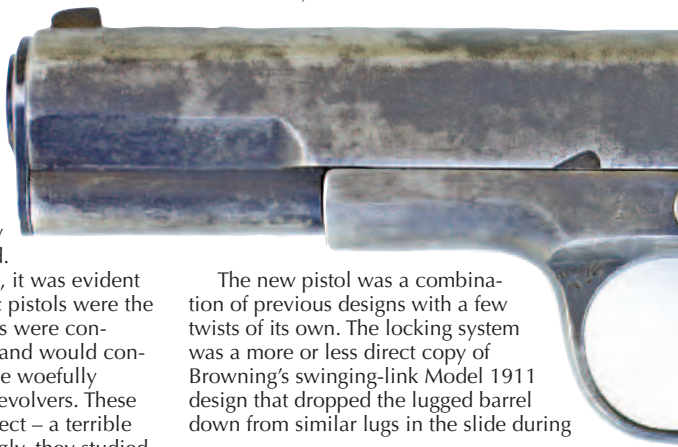

By John Marshall

It wasn't a pretty pistol that I held in my hands. The once-even bluing of this classic relic was worn and the metal was deeply corroded in places. I have seen this latter characteristic before on many wartime weapons. It's called "blood pitting" and it's quite distinctive. This was one of the handguns that were issued to Soviet soldiers in the "Great Patriotic War" that we know as World War II. Quite obviously, it had seen combat. Genuine unaltered Tokarev pistols are quite rare in the United States, as imports in recent years have had to be modified by law to include a positive manual safety (which the original gun lacked). Still, the guns were simple, easy to use and had a terrific reputation for reliability. Manufactured in 1945, this pistol might have been used as the Russians invaded and devastated the city of Berlin in that last desperate stand of the Germans against their foe from the East. Who knows? "If only this gun could talk" comes to mind.

As World War I drew to a close, it was evident to the Russians that semiautomatic pistols were the wave of the future where handguns were concerned. They had been equipped (and would continue to be for many years) with the woefully obsolescent Model 1895 Nagant revolvers. These were painfully slow to load and eject – a terrible disadvantage in combat. Accordingly, they studied existing semiauto handgun designs with a view towards developing a suitable new issue handgun. Large stocks of U.S. Colt Model 1911 and Colt Models 1900, 1903 and 1905 pistols had been imported into Russia, as well as substantial quantities of German Model 1896 "broomhandle" pistols. These firearms were destined to influence the design of Russia's new issue handgun. Enter Fedor Vasilevich Tokarev.

Tokarev was born in 1871 into a poor Cossack family located in the large village of Yegorlyk in the Don River Basin. At the early age of 11, he was apprenticed to a local blacksmith. His mechanical talents began to be noticed, and in 1885 he was admitted to the Educational Metal Workshop in his home city. His first teacher was A.E. Chernolikov, who was the inventor of Russia's last official percussion muzzleloader, the Model 1860. At age 21, Tokarev became a Cossack noncommissioned officer and was assigned to the 12th Don Cossack Regiment as an armorer-artificer. He became a commissioned officer at age 29, and then rejoined the same regiment as a Master Gunsmith. In 1907, at the Imperial Artillery proving ground, he developed a semiauto conversion of the Model 1891 Mosin-Nagant rifle that was officially tested. In 1914, he joined the staff at the Imperial Small Arms

Factory at Sestroretsk, and then became its Technical Director in 1917. Following WWI, he became a Senior Engineer at the Izhevsk small arms factory. He then transferred to the Tula ordnance factory and worked with other talented designers. He developed a number of interesting firearms, some of which of which were accepted for service, but which will not be covered here. In 1930, at age 59, Tokarev had developed a semiautomatic pistol which competed against designs by S.A. Korovin and S.A. Prilutsky. In those trials, his pistol was selected and adopted as the TT-30 (Tula-Tokarev Model 1930).

The new pistol was a combination of previous designs with a few twists of its own. The locking system was a more or less direct copy of Browning's swinging-link Model 1911 design that dropped the lugged barrel down from similar lugs in the slide during

“The Germans could use their widely available 7.63x25mm Mauser cartridge in these captured weapons.”

recoil. This kept the barrel locked to the slide until the bullet had left the barrel, and then allowed the slide to continue to the rear for ejection and chambering on the return stroke. The cartridge chosen was called the 7.62x25mm Tokarev, but in actuality, it was virtually the same and interchangeable with the 7.63x25mm Mauser cartridge used in the Model 1896 Mauser pistol. The Tokarev round was a bottlenecked high-velocity number pushing a .30 caliber bullet weighing about 86 grains to a muzzle velocity of between 1300 and 1650 feet per second. The bottlenecked configuration allowed for very positive chambering and helped to assure reliability. The single-stack magazine held 8 rounds and was released by a button behind the trigger on

Soviet TT-33 Tokarev Pistol

the left side. An interesting idea was incorporated, perhaps inspired by a feature on the 1896 Mauser pistol. It was an easily removable module that contained the ejector, cartridge guides, mainspring, hammer, sear, disconnector and related pivot pins in a single unit. This allowed quick and easy replacement of these components in the field. The hammer's mainspring was enclosed within the hollowed-out hammer itself. As there was no manual safety on the gun, the usual procedure for carry was to keep it in the holster at half cock or with an empty chamber. Fieldstripping was quick and easy, mimicking the procedure used

was abandoned in favor of a frame with an integral backstrap. The new design was given the designation TT-33, with "33" representing its year of adoption. This pistol was to serve the Red Army throughout World War II. It did not actually replace the 1895 Nagant revolvers during the war, as those and firearms of almost any type were valued and kept in service. TT-33s were produced at both the Tula and Izhevsk arsenals. During the course of the war, as German troops pressed farther into Russia, manufacturing machinery from Izhevsk was hurriedly transferred to locations near Tula. The pistol illustrated bears the "triangle in a circle" stamp of the Izhevsk facility and a date stamp of 1945. Various styles of grips were utilized, including checkered plastic, grooved plastic and checkered wood (the latter only in 1942 and 1943). The center insignia on the plastic grips was either a star or a triangle within a circle, and the initials "CCCP." In the Cyrillic alphabet these initials stand for "Union of Soviet Socialist Republics." It's estimated that over one million TT-33 pistols were produced by the end of WWII. During the war, the German *Wehrmacht* captured substantial quantities of Tokarev pistols and actually issued them as the *Pistole 615(r)*. The Germans could easily use their widely available 7.63x25mm Mauser cartridge in these captured weapons.

Following the war, in 1946, the TT-33 was slightly modified to expedite manufacturing. The major discernible difference was the use of 24 vertical grasping serrations in the slide, replacing the 12 grooves of two styles used previously. Some "TTR" .22 caliber training pistols were made in the postwar years. Production finally ceased in the early 1950s as the new Makarov pistols were officially adopted. TT-33s were still in service with various Soviet units as late as the 1970s. Russia licensed many of its Warsaw Pact allies to manufacture the Tokarev, and varieties of it were made in China, Egypt, Hungary, North Korea, Poland, Romania and Yugoslavia. Tokarevs are still in service in China and North Korea. China is producing them even now. Over 40 nations have used the basic TT-33 design in one form or another. I have shot a Yugoslav version made in 1971 that has a manual safety and a lengthened frame to accept a longer magazine holding 9 rounds. It proved well-made, dependable, on target, and very loud as the high-velocity bullet screamed downrange.

Unaltered Russian Tokarev pistols are highly collectible classics today and are valued as part of any World War II collection. They are simple, rugged, accurate and reliable arms that helped to win the war. Comrade Tokarev did a good job for his country.

...easily
...ilable

...apons."

on the U.S. 1911 pistol. The selection of a 7.62mm bore diameter enabled machinery economies, as the Russian rifles and revolvers of that era had the same internal dimensions.

One thousand TT-30 pistols were ordered for troop trials and were officially accepted by the Red Army. Almost right away, however, some changes to facilitate manufacturing were developed and implemented. The original barrel had the locking lugs only on top, while the lower surface was solid. A new barrel with fully circumferential lugs enabled easier machining. The removable backstrap on the TT-30 (which required careful fitting)

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

K83-21894 \$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

Concealed Carry Tote⁴⁷

\$45⁰⁰

K83-18193

Dillon's Concealed Carry Tote accommodates all the tools you need to survive the urban jungle!

This low-profile carry case looks like a mild-mannered-computer-nerd accessory, but it's designed for your pistol as well as your PC! Made of rugged fabric, with heavy duty zippers on all three main compartments – one designed to hold a laptop computer, one for folders and paperwork, and one in the middle for a handgun.

Inside the case are pockets and pouches that will hold spare magazines as well as folding knives, letter openers, flashlights, cell phones, full-sized 8.5" x 11" paper note pads, etc. Measures 13.5" x 11.5" x 6.5" deep.

'Plan B' Day Planner

Dillon's "Plan B" Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

By Larry Drake

Since the late 90s, I've been participating in various competitive shooting sports. USPSA, IDPA, ICORE, our local steel matches, and "Outlaw" 3-Gun have all received a fair share of my attention, time and money. Within those sports, I've played around in a lot of different equipment divisions, depending upon which major matches were coming up or just what I felt like shooting at the time. For the last several years, my "go to" gun has been my .357 Magnum Smith & Wesson Model 627. It's great for both Limited and Open Divisions in ICORE and Revolver Division at the steel matches. I even have an Open Classification in USPSA and I shot all of those classifiers with a 627 with a red-dot scope on it. Why would I shoot in the run and gun, super high capacity, race gun class with a clunky old revolver that only holds eight shots?

Primarily, it was because I was practicing to shoot Open Division in ICORE's International Revolver Championship, which is held annually at the Hogue Action Pistol Range in San Luis Obispo, California. Secondly, it was because USPSA didn't allow Revolver Division competitors to fire more than six shots from one position without a reload. As of February 1, 2014, that rule has

changed and competitors who choose to accept minor-only scoring can shoot more than six shots without getting bumped into Open Division. For months now, Internet forums such as BrianEnos.com have been flooded with questions about the best guns and the loads to feed them.

Not surprisingly, they almost all agree that the Smith & Wesson 627 is the only gun a serious competitor would choose. What is surprising is that many competitors choose to shoot .38 Short Colt out of their .357 Magnum revolvers.

Why would shooters using eight-shot revolvers, EDM-cut moon clips and race holsters want to use an obsolete cartridge like the .38 Short Colt? The answer is in USPSA's motto DVC – *Diligentia Vis Celeritas* – which is Latin for Accuracy Power Speed. Speed is why .38 Short Colt is a great choice for competition shooting. When you're reloading a revolver, you have to deal with the ejection of the spent cartridges. The longer those cartridges are, the more likely they are to hang up between the cylinder and your gun (or even your hand) during ejection.

Short cases are also more forgiving of "short stroking" the ejector rod. During that rush to complete your reload, a quick pop of the ejector

& SHORT of it

49

rod could **save** you a tenth of a second or **cost** you several, all depending upon whether or not that empty moon clip falls free of your cylinder. Once that moon clip does fall free, you have to hustle to get the next one in, close the cylinder and get back to shooting. Because all moon clips have some degree of floppiness to them, shorter-cased rounds like the .38 Short Colt make this task easier as well. The floppiness is necessary because the rounds need to have some play in them to account for varying tolerances in the rounds, the moon clip, and the cylinder. This “wiggle room” allows the rounds to fit without binding. Without it, tolerance stacking or even a bit of fouling can cause the whole moon clip to bind up and your reload is blown. The .38 Short Colt really shines here, because they don’t tend to overlap as much as longer .38 Specials would.

So, where did .38 Short Colt come from and where can you get it? It was originally conceived as a cartridge conversion for the Colt 1851 Navy Revolver. Converting cap and ball revolvers to metallic cartridge firing guns was popular during the post-Civil War era. Eventually the Short Colt evolved into the Long Colt, which led to the .38 Special and .357 Magnum cartridges that we see today. While .38 Short Colt is still being manufactured, don’t expect to find it at your local sporting goods store and, if you do run across a box, don’t expect that you will find it loaded with the projectiles or the powders that most die-hard revolver shooters demand. For those kinds of loads, you will need step up to your reloading bench.

If you’re really into reloading, you might already have a .38 Short Colt setup and not even know it! After a little experimentation with my XL650, I loaded up a spare toolhead with a .38/.357 sizing die and 9mm powder funnel, seating and crimp dies. The .38 Special shellplate fit perfectly and the .40 S&W casefeeder parts rounded out the setup. I use Dillon dies, so I didn’t have to take my 9mm toolhead apart and lose all my

settings – I just bought extra die bodies for the new setup and swapped the die inserts from the 9mm setup to the Short Colt setup as needed. This saves a bit of cash and takes very little time since all you do is pull a clip to release the die inserts.

I won’t go into specific load development, there are too many variables and even the “experts” never agree on the perfect load, but I will say that I started my own quest for .38 Short Colt loads by reading. I read all I could find in reloading manuals (both old and new), manufacturers websites and Internet forums. In the end, I loaded the case with a starting load I’ve often used

for 9mm. I settled on a load that makes power factor (that “Vis” portion of the USPSA motto I mentioned earlier) and burns clean so it reloads quickly both going in and out of my gun’s chambers. A clean powder is key here. If the load doesn’t burn clean you can get a lot of unburned powder and other residue in the chambers which will have a negative effect on the speed of your reload.

Components for .38 Short Colt aren’t exactly varied or plentiful but they are out there. After laying in a supply of Starline Brass, coated bullets from S&S Casting, and some Federal small-pistol primers, I started loading .38 Short Colt and

haven’t looked back. It’s important to note that I’m not mentioning Federal primers just in passing. They are the softest primers on the market and if you want to get your revolver’s double-action trigger pull down to 7 pounds or less, you’ll want Federal primers above all others.

Gearing up to shoot a revolver in any sport isn’t something that most people seem to want to do. For those of us who do it, the rewards are: (1) A LOT of fun. (2) The challenge of getting a stage done when missing is just NOT an option and planning is supremely important. (3) It also doesn’t feel too bad when you beat some guys who are shooting guns that hold three to four times as many bullets! (Not that I would notice something as petty as that.) Try it out, though, and I think you’ll see what I mean.

Why would shooters using eight-shot revolvers, EDM-cut moon clips and race holsters want to use an obsolete cartridge like the .38 Short Colt?

BFR Accessories

A. 50 BMG CASE TRIMMER ASSEMBLY

Features an industry standard 1-1/2"-12 UNF threaded body, a 1/4 HP motor, replaceable carbide cutter, quick-disconnect cord and includes the .50 BMG trim die.

K83-50050, \$384.95

B.

B. 50 BMG CARBIDE SIZE DIE

The only .50 BMG size die in the industry that's a full-length solid carbide size die, for increased die life and scratch resistance. It also has a solid carbide expander ball, placed in the middle of the power stroke for easier operation. The die body is standard 1-1/2"-12 UNF thread, and is manufactured to low chamber tolerance specifications.

K83-50075, \$869.95

C. 50 BMG POWDER MEASURE ADAPTER

For use with the RCBS .50 BMG powder measure.

K83-50125, \$76.95

C.

D.

D. 50 BMG PRIMER SEATING DIE

One of these is included with Dillon's Big Fifty Reloader, but may be used as an accessory on a separate toolhead. The primer seating die is adjustable for enhanced control of primer seating. Includes two primer punches: one flat, match-style primer punch and one cupped, milspec primer punch.

K83-50200, \$149.95

E. 50 BMG PRIMER POCKET SWAGER

Makes it easy to remove the military crimp.

K83-50001, \$299.95

E. (1) PRIMING CONVERSION

Converts Swager to Priming System.

K83-50003, \$76.95

F. 50 BMG PRIMING SYSTEM

Allows off-the-machine primer seating.

K83-50002, \$299.95

F. (1) SWAGER CONVERSION

Converts Priming System to Swager.

RCBS Scale Check Weights

Standard Set: 60.5 grains for powder charges.	K83-12297	\$34.95
Deluxe Set: 510.5 grains for bullets, cases and powder.	K83-12458	\$49.95

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Apex Tactical Specialties Armorer's Block

Apex Tactical Specialties' Armorer's Block is designed for S&W Semi Auto M&P Pistols in all calibers, sizes and configurations, including thumb-safety models and the M&P Shield; also for GLOCK® semiauto pistols in all sizes and calibers. The Armorer's Block supports a pistol for armory work and detail disassembly. Its pre-positioned bosses, slots and holes remove pressure from critical function surfaces while pins are driven in and out. High-density polymer construction prevents marring of the frame while driving pins in and out. Made in USA.

Armorer's Block **K83-19536 \$29.95**

Grace USA⁵³ Gun Care Tool Set

This custom designed 12" x 9" x 1-1/2" case is made from durable soft Nukaf and contains a 17-piece set of Grace USA Gun Care Screwdrivers (8 ea.), Solid Brass Pin Punches (8 ea.) and a specially fabricated 8 Oz. Brass Hammer. The screwdrivers are hand-assembled and custom hollow ground to fit scope screws, plug screws, guard screws, etc. The handles are turned from quality Maine hardwood and protected with a smooth finish. Made in USA.

TACCOM, LLC Accessories for .22 LR AR-15 Conversions 55

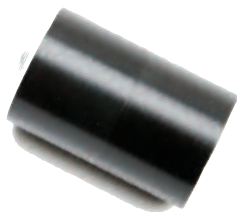

TACCOM's **Enhanced Firing Pin** for Ciener/CMMG .22 Long Rifle AR-15 caliber conversions is a direct-replacement firing pin, made from 17-4 SS heat treated to a condition H900, to present a tough, hard firing pin that won't break or mushroom out after many firings. The tip has been designed to stick out of the hole only .030", so you will not damage your barrel by dry firing your weapon.

K83-19538 \$13.95

The **TACCOM Extreme Extractor** is a drop-in part for your Ciener/CMMG .22 Long Rifle insert that will give you consistent extraction, which is **KEY** for a reliable firearm. This will help with your live-round extraction, depending on how well the factory has cut the chamber, and the type of chamber cut.

K83-19539 \$10.95

Does your .22 Long Rifle insert move back and forth in your AR upper? The **TACCOM Pressure Plug** will apply a constant pressure on your insert, always keeping it in the most forward position when the rifle is in battery. You can install and remove the pressure plug in seconds with no tools.

The Ruger Super

Ruger's Super Redhawk Alaskan is a compact version of the familiar Super Redhawk, designed primarily as a packing gun for outdoorsmen. The SRA is available in .454 Casull and (the comparatively mild-mannered but still brutal) .480 Ruger. Thomas' sample gun was chambered for the latter.

The 2-1/2" barrel has been trimmed even with the end of the frame extension. The recessed crown makes the huge hole in the muzzle look even larger.

By Duane Thomas

In this article we're going to do something a bit different: review a gun chambered in a cartridge for which it's currently out of production. However, once enough people know just how cool is this gun/cartridge combination, maybe we'll see it return.

For years I thought that if Ruger ever decided to chop the barrel of their Super Redhawk even with the end of its frame extension, they'd have a really neat, large-frame, big bore snubnosed revolver. Obviously I wasn't the only one with that idea, because that's exactly what they did with their Super Redhawk Alaskan. The SRA has been chambered for three cartridges, .44 Magnum, .454 Casull and .480 Ruger. Now we will review and test the only version of SRA not currently in production: the .480 Ruger.

The author tested .480 Ruger ammo from four different makers: Buffalo Bore, Cor-Bon, Grizzly and Hornady.

The .480 Ruger cartridge might be called the ".475 Linebaugh Short" because it is, in essence, the .475 Linebaugh with the casing trimmed from 1.400" to 1.275" and the power level reduced. Despite its ".480" name, bore diameter is still .475".

"Reduced power" is a relative term: the .480 Ruger is still a big bore super-Magnum cartridge. I decided to begin my testing with accuracy work from the bench. MISTAKE! When you shoot from the bench, recoil gets about twice as heavy as when firing standing unsupported because your body can't give with it. Most of the guns I bench are 9mm, .40 S&W and .45 ACP. Since they don't have that much recoil to start with, twice what's already there is no big deal. With the .480 Ruger, big deal. Every time I pulled the trigger, I could feel the bones rattling

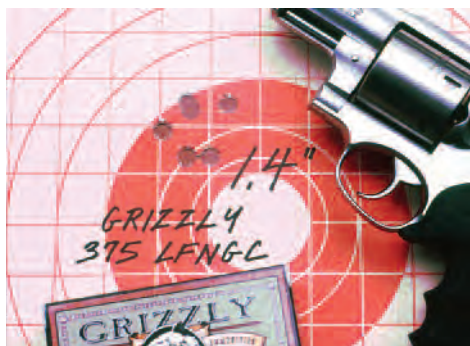

Redhawk Alaskan 63

Even when loaded with six rounds of the “fat” .480 Ruger cartridge, there is still plenty of mass left over in the cylinder walls.

The Alaskan’s trigger is narrow and smooth surfaced.

Best accuracy at 50 feet was 1.4” with Grizzly’s 375-grain Lead Flat Nose Gas Check.

Both Buffalo Bore loads, the 370-grain Lead Flat Nose and 410-grain Wide Flat Nose posted groups of 1.5”.

inside my hands, arms and shoulders, and after two cylindersful I had damaged my elbow joints and given myself “shooter’s elbow” that took months to heal. At that point, bench work ended.

However – and this is how much common sense I have – two weeks later, after healing up partially, I was back at it, and did quite a bit of shooting freestyle, standing up on my own hind legs like a man. From standing, this gun is actually fun to shoot. (Could Dwayne “The Rock” Johnson be wrong? A Ruger SRA is what he uses in the movie “Faster.” And in the hands of guy his size it looks proportional.) When I told John Ransom of Ransom Rest fame about my experiences with this gun, he said, “You fired 12 rounds of .480 Ruger out of this gun from the bench? And then came back later to finish your

review freestyle? I’m impressed! [Name of well-known gunwriter withheld to avoid embarrassing him] told me he fired five rounds and sent it back to Ruger.”

Formal accuracy testing proceeded from a Ransom Rest at 50 feet with ten different .480 Ruger loads. Handheld I tested it rapidfire, in close, just as fast as I could haul the muzzle down from its prodigious recoil.

The Ruger Super Redhawk Alaskan struck me as an excellent choice for those wanting a reasonably compact, heavy duty outdoors revolver. Fully loaded with six Grizzly 340-grain Belt Mountain Punches, the SRA weighs 49.3 ounces according to the postal scale, and that’s not at all bad for what it is. Just don’t try to sight it in from the bench unless you have more robust elbow joints than I.

Freedom Standalone LLC is proud to offer the first and only true full-size torso target on a standalone base. Simply slide the torso into the base wedges for a sturdy and durable fit; then move dirt, sand, etc., onto the base to hold in place even in the wind. There's no more need for heavy, cumbersome target stands. With our 100% recycled targets and bases, sport shooting is simpler than ever.

Freedom Targets 5-Pack **K83-12099 \$29.95**

RANGE TIME. ANYTIME.

Our Pistol Perfect bullet traps make range time, anytime a real possibility.

Available in 3 different sizes, each trap can handle handgun calibers up to .44 Magnum, and rifle calibers up to .223/5.56mm.

Our patented bullet trap technology ensures the shooter of a safe, clean, virtually maintenance free way to target practice. Lead is deposited into a collection pail, which can be recycled or sold. Talk about convenience!

Visit our website to see which Pistol Perfect Trap will work best for you.

Snake Oil is a derivative of an FDA certified medical lubricant used in high-speed medical drills.

- Provides a film that separates and protects moving parts, for smoother operation and increased efficiency.
- Contains no evaporants and has a film affinity in excess of two years.
- Reduces the collection of dirt, dust and other contaminants.
- Performance in extreme conditions is unparalleled.

Sweet's Australian 7.62 Solvent

easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

K83-13128	\$12.95
------------------	----------------

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is used in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	K83-15571	\$7.95
Slide-Glide Lite	K83-15572	7.95

Micron UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

K83-75125	\$9.95
------------------	---------------

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1)

Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps. K83-18599 \$14.95

drymate™

The **drymate™** Gun Cleaning Pad protects your table and firearms from scratches and spilled cleaning fluids. Machine washable, durable, stain resistant and long lasting. Gun Cleaning Pad™ K83-11313 \$19.95

Bore-tips® Bore Cleaning Foam Swabs

No s#!t, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!"

The Bore-tips Swabs REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform appli-

cation of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

Evolution Gun Works

These two-piece flat checkered mainspring housings with bolt-on mag wells are similar to the patented one-piece S&A design. The mag well and checkered mainspring housing are machined from solid bar steel stock and can be used without the mag well attached, although there will be a small dovetail below (this does not impair function). This is a great replacement for plastic mainspring housings on full-size or commander model 1911s.

ElZetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

*Sand not included.

The Dillon Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snapper-release buckles. Dimensions: 66" x 27.75"

K83-18146 \$65.00

This three-piece shooting bag set is an incredible value for the money! The bags are made of durable, water-resistant 600 denier polyester and provide a steady and solid shooting system for long guns and handguns. I filled the ones in the photo with walnut tumbling media and found them to be easy to fill and much lighter to carry than when filled with sand.

Comp-Tac's Trojan Horse Long Gun Case

The Trojan Horse Long Gun Case is the first of its kind: a safe, comfortable, simple and unobtrusive way to carry your long guns with you. No longer do you need to worry about a casual observer spotting you with a "Gun" case as you transport your long guns to and from your car. Instead all they will see is a person with a sports bag. It measures 36" Long, 4"-15" Wide, 4" Deep and features rigid side panels that provide concealment with no printing; an adjustable, padded shoulder strap with side-release buckle on either end; a heavy duty zipper with tactical speed pull attachment for quick deployment; inside divider with Molle straps; and two inside zippered pockets. Will hold up to 20" long barrel with collapsible stock.

Millett Designated Marksman Tactical Scope

The Designated Marksman Scope fills the requirements of the law-enforcement officer, rifle shooter, and the big-game hunter who needs a quick sighting system at ranges of five to 500 yards. The "Dot in a Donut" reticle allows for fast, natural aiming. The shooter's eye lines up the circle at close range, and the one-MOA dot gives accuracy at the longer ranges. Range estimation is straight forward by use of the circle out to

500 yards.

Compact design,

30mm tube and

bright illumination of the reticle are just a

few of the many features of the DMS-1. Bright

red illumination of the reticle adds to the quick-

ness of the sighting system in day and low-light condi-

tions. At one power it works well as a reflex sight and at

longer ranges the four-X magnification gives increased ac-

curacy.

K83-19458 \$249.95

Bushnell Trophy TRS-25 Ultra Compact Red Dot Sight

77

Bushnell's Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell's high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute of angle dot.

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Tactical Sports 45°-Offset Auxillary Optics Mount

A twist of the wrist is – quite literally – all it takes to switch from your long-range optic to a CQB red-dot sight with Tactical Sports' 45-degree Offset Auxillary Optics Mount! Fits most Picatinny rails. (Pictured with Bushnell's TRS-25, which is NOT included!)
45° Offset Optic Mount **K83-14472 \$14.99**

TACCOM, LLC 90° C-More Mount

You won't believe how much this will decrease your times from initial sight picture and target transition. You'll never lose your dot...and finding it has NEVER been easier! Turning your C-MORE (Railway or Slide Ride) 90 degrees and eliminating the rail mount will lower your dot by as much as 1" to the bore of your pistol...and lower is just going to increase your speed. And when you do torque your pistol, you'll find the dot just that much easier. Designed by Bearcave Machining and offered by TACCOM, LLC.

Ruger MK1 (pictured)	K83-19535	\$79.95
Browning Buckmark	K83-19534	79.95

The Japanese Sm

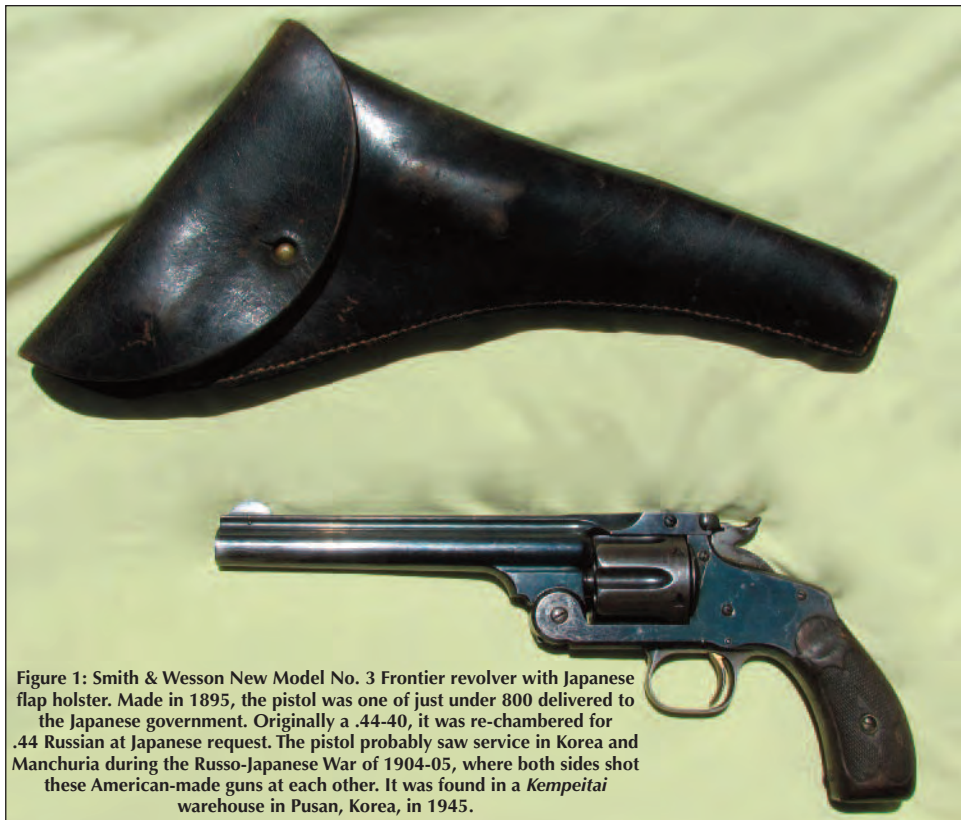

Figure 1: Smith & Wesson New Model No. 3 Frontier revolver with Japanese flap holster. Made in 1895, the pistol was one of just under 800 delivered to the Japanese government. Originally a .44-40, it was re-chambered for .44 Russian at Japanese request. The pistol probably saw service in Korea and Manchuria during the Russo-Japanese War of 1904-05, where both sides shot these American-made guns at each other. It was found in a *Kempeitai* warehouse in Pusan, Korea, in 1945.

By Brian Dervin Dillon, Ph.D.

One of the perks of being on the winning side in any war is that the victors get to take the loser's guns home with them. The house I grew up in was full of such trophies, many of them up on the walls. Many more resided in grandma's basement, a giant gun vault, across town. This was the family armory and firearms lending library. As a kid I checked one gun out each week, disassembled it, cleaned it, reassembled it, then exchanged it for a different firearm. The keeper of the keys was my Uncle Jack Dillon (1915-2001).

In late September 1945, Uncle Jack, recently promoted to Colonel, had a sergeant take a torch to the locks on the steel doors of an unmarked, three-story warehouse building in the port city of Pusan, Korea. Jack Dillon had been drafted into the U.S. Army as a private four years earlier in 1941. He was the second-generation Mustang of our family to rise up through the ranks, repeatedly promoted for merit and for bravery. Scouting ahead of Patton's tanks in the ETO as a Captain, he had been wounded twice, and awarded the Bronze Star. Jack helped liberate two Nazi con-

centration camps before VE day. At the German surrender he was a Major with the easternmost advance of the U.S. Army in Czechoslovakia.

His reward for such exemplary service was to be sent even farther eastwards, all the way to the Asiatic Theater, as a light bird. Fortunately, VJ day came before he had to storm the Japanese homeland. Promoted again, he was sent to the land of the morning calm to help rebuild a prostrate Korea. One of Colonel Dillon's jobs was to deconstruct the pervasive Japanese Imperial legacy of 50 years of occupation. Besides processing small Japanese units straggling southwards, some even coming all the way from Manchuria, Dillon was committed to rooting out vestiges of the Japanese secret military police, the *Kempeitai*.

The *Kempeitai* was created in 1881 as the Japanese Army's police force; later, it assumed a similar function for the Navy, foreign service and judiciary. After 1895, with the Japanese occupation of Taiwan, Korea, Manchuria, and China, the *Kempeitai* took on sinister counterespionage and counterinsurgency functions. Not answerable to any other branch of authority, by the 1930s the

ith Comes Home

Figure 2: The stumpy and underpowered .44 Russian round (center) compared with its more effective black powder contemporaries the .44-40 (immediate left) and the .45 Colt (far left). The two smokeless rounds later descended from the .44 Russian are the .44 Special (near right) and .44 Magnum (far right).

Kempeitai was torturing and murdering prisoners of war and civilians, enslaving “comfort women,” and conducting biological experiments on living subjects, all with complete impunity. Small compared to the immense Japanese army, by the end of World War II at least 2,000 *Kempeitai* were nevertheless stationed in Korea. Jack Dillon considered them the Asian equivalent to the Nazi *Gestapo* and *SS*, whose handiwork had turned his stomach earlier in 1945 at Buchenwald. If he could catch *Kempeitai* in Korea, he would happily send them off to trial for war crimes, or, better yet, as a paperwork reduction move, simply turn them over to local Koreans eager for justice. The mysterious Pusan building Colonel Dillon was cutting the locks from in September 1945 had been identified as a *Kempeitai* warehouse by a Korean informant.

It proved to be just that, stuffed to the rafters with loot from both Korea and China, much of it stolen from museums and from the houses of wealthy *politicos* or merchants murdered by the *Kempeitai*. Firearms and edged weapons were also found inside, the usual Samurai swords, Arisaka rifles, and Nambu pistols and machine guns. Also, surprisingly, was an old American Smith & Wesson revolver with 6-1/2” barrel inside a military flap holster. Dillon put his own locks on the doors, posted guards, and pondered what to do with the treasure he had stumbled upon. Local Korean authorities were able to identify some of the stolen material, so it was returned to the museums from which it had been pilfered. But North China by this time was in the hands of the Communists. Erstwhile allies while the shooting war had been going on, now little communication and even less

cooperation took place between American and Communist Chinese forces. Many of the Chinese art treasures, consequently, were loaded aboard empty Liberty ships that had brought emergency foodstuffs to a now-starving Korea as the winter of 1945-46 approached. Much of this material ended up in San Francisco’s De Young Museum. Colonel Dillon kept the Japanese Smith & Wesson pistol and took it back to California when he finally rotated home the following year. But why would an American revolver in a Russian caliber show up in a Japanese secret police warehouse in Korea? What was the Russian-American-Japanese-Korean connection?

Just as Americans had pushed westwards across our continent to the Pacific, the Russian frontier had moved ever eastwards through Siberia to the same ocean. Russia took Sakhalin, just north of Japan, in 1815. In 1860 she annexed Amur province, northern Manchuria, with a tiny Pacific coastal finger bordering Korea. Russia released her claim on Alaska and the Aleutians, selling them to the United States in 1867. Cowboy mythology relates how, shortly afterwards, Russian Grand Duke Alexei Alexandrovich, with Buffalo Bill Cody as his guide and accompanied by both Phil Sheridan and George Armstrong Custer, shot hundreds of buffalo from his private train. The Duke so admired Cody’s rapid-reloading Smith & Wesson revolvers (and with the S&W factory representative “just coincidentally” along for the ride) that he ordered 20,000 pistols for his Cossacks on the spot. But this persistent story is just one more example of **Buffalo Bill B.S.**, for the royal hunt took place in January 1872, more than ten months *after* the Czar had already ordered his first ship-

ment of S&W single-action revolvers in a brand-new caliber, .44 Russian.

The .44 Russian round was underpowered in comparison to contemporaries like the very hard-hitting .44-40, which was, after all, originally a big-bore rifle round. Both the .45 Colt revolver cartridge and the .44-40 employed 40 grains of black powder while the .44 Russian used only just over half that amount. The .44 Russian, however, was very accurate, it was easy to shoot and easy to control, because of its heavy – 246-grain – bullet and comparatively small powder charge. It became the favorite of “trick shooters” like Annie Oakley, who sometimes shot hundreds of .44 Russian rounds sequentially, invariably hitting her targets while others continuously reloaded her pistols. But, with the advent of smokeless powder, Ameri-

revolvers were sent to the Czar, and an equal or greater number of Russian-made copies were also made, until both began to be replaced by the weird Nagant gas-seal design after 1895.

Continuing on to Japan, beginning around 1550, thousands of soldiers armed with smooth-bore matchlocks fought each other for almost a century, until all firearms were banned as inconsistent with the spirit of *Bushido*. Warfare then became the province of small numbers of specialists, sword-wielding Samurai. Two centuries of near-total gun control followed. Interest in firearms was reawakened in the late 1860s but Japanese technology in everything but sword making was now three hundred years out of date. So, emissaries were sent to England, Germany and America to buy everything from pistols to war-

Figure 3: One of General Oku's officers at the head of his troops storming the Russian defenses at Kin Chau, firing his revolver in combat. Such depictions from the Russo-Japanese War of 1904-05 are rare; usually shown is the sword, the traditional Japanese weapon. Print by Richard Caton II Woodville.

can shooters grew disenchanted with the old .44 Russian, so, around 1907, its casing was elongated, a more powerful charge of smokeless powder was introduced, and the .44 Special was born. The .44 Special, while reasonably accurate and controllable, still came up short in comparison with the older .44-40 and .45 Colt cartridges. So Elmer Keith tinkered with the .44 Special, stretched its case and upped the powder charge once again until, by 1955, the .44 Magnum had been created. Today a smokeless .44 Russian variant is most often fired in new “cowboy action” replicas, the old round seldom recognized as the father of the .44 Special and grandfather of the .44 Magnum.

The First Model .44 Russian pistol looked very much like its American Model 3 predecessor, but the Second Model .44 Russian took on the distinctive “double” trigger guard spur extension, humped backstrap, and tapered grip that would be its hallmark for the next quarter-century. Eventually, over 130,000 Smith & Wesson .44 Russian

ships, both for reverse engineering and to equip the nascent Japanese Army and Navy.

Following the Russian example, the Japanese embraced the Smith & Wesson design, first buying 5,000 Second Model single-action pistols in .44 Russian in 1877. Most were issued to military police and to naval officers. Within the next two years just under two thousand more Third Model single-action .44 Russian pistols were bought, again for the Navy. The third and final purchase of S&W guns by the Japanese was in 1895-96, when almost 800 New Model No. 3 Frontier single-action revolvers, including the Pusan example, were bought, for both the Navy and *Kempeitai*. This variant, introduced in 1885, had a long cylinder to accommodate the powerful .44-40 round, yet all the pistols shipped to Japan were re-chambered to .44 Russian, to match pre-existing official ammunition requirements. The Pusan Smith & Wesson arrived too late to see service in the Sino-Japanese War of 1895, but may have been used

during the China Relief Expedition of 1900. It was almost certainly a veteran of the Russo-Japanese War of 1904-05, in which *both* sides shot at each other with American-made Smith & Wesson .44 Russian revolvers.

The Sino-Japanese war of 1894-95 was fought over, and in, Korea. Korea by 1894 was a semi-autonomous kingdom paying tribute to the Manchu Empress to be left alone. But a peasant revolt led to Chinese troops marching in to restore order. The Japanese objected, and marched in themselves. The Chinese were defeated on both land and sea. As prizes, the Japanese took the island of Taiwan and the Manchurian Liaodong Peninsula, halfway between Peking and Seoul. Russian pressure shortly forced the loss of Manchurian lands, but by this time the Korean peninsula had become a Japanese colony in all but name.

Tensions between Japan and Russia now simmered. The Russians secured Chinese permission to extend their trans-Siberian railroad across Chinese Manchuria, the Manchu homeland, to Vladivostok. But this harbor was iced up for most of each winter and unusable. So, in 1898, the Czar pressured China into leasing him the same Manchurian lands recently denied to Japan. Construction soon began there for Russia's only ice-free Pacific naval base: Port Arthur. The Russians also began pushing south of the Yalu River, antagonizing the Japanese who now considered all of Korea their own preserve.

Meanwhile, Chinese humiliation by the Japanese in war and the Russians at the bargaining table spurred a revolt by traditionalists demanding that all foreigners and foreign influence be erased from China. Because of their elaborate *Kung Fu* unarmed combat exercises, Westerners nicknamed these rebels "Boxers." By the Spring of 1900 the Boxers were rampaging through North China, killing western missionaries and thousands of Christian Chinese converts, finally besieging foreign diplomats within Peking's legation quarter.

The China Relief Expedition of 1900 was a multi-national effort, American, Austrian, British, French, German, Italian, Japanese and Russian. An American hero of the campaign was Captain Henry J. Reilly, commander of Battery F, 5th Field Artillery. One of Reilly's enlisted men was my grandfather, William T. Dillon, then on his third war in as many years. Grandpa Dillon, Jack's father, fought alongside Japanese troops in China, considering them our most effective allies. After bitter fighting the Boxers were defeated, and the "Eight Nations," with the exception of America, carved up China like a Christmas turkey. Russia now expanded her holdings in southern Manchuria, making conflict with Japan inevitable.

A flock of American war correspondents, including Richard Harding Davis, Jack London and Frederick Palmer, rushed to Tokyo to beat the outbreak of hostilities, declared on February 8, 1904. The Russians mobilized two million men, the Japanese a quarter that many. Jack London

headed towards the Yalu River, the Korean/Manchurian border, where much early fighting took place. After repeated misbehavior, the Japanese finally threw the cantankerous California reporter out of Korea. London wrote in his Hearst newspaper column that he couldn't see "how Japan can possibly win" its war against Russia.

But the Battle of the Yalu was a Japanese victory. Then, eight months later, Port Arthur fell despite more than 50,000 Japanese KIA. Another month later, in February 1905, the Japanese inflicted 90,000 casualties on the Russians, utterly defeating them at the Manchurian city of Mukden. The final victory was the Naval Battle of Tsushima on May 27-28, 1905, when the Japanese wiped out the Russian Fleet. President Teddy Roosevelt brokered the peace between Russia and Japan, becoming the first American awarded the Nobel Prize for his efforts. Russia was forced to give up her Manchurian and Sakhalin holdings to the Japanese. In 1910, with nobody left to tell them no, the Japanese formally annexed Korea, and began planning their next imperial adventure, the conquest of China.

Meanwhile, as early as 1893, the Japanese began to equip some Army non-coms with a top-break, 9mm (.38) Japanese-made revolver, the Model 26. Despite its bobbed hammer, the gun was an obvious copy of Smith & Wesson double-actions. Then, in 1904, the first semi-automatic Nambu pistol chambered for the bottleneck 8mm round was issued in very small numbers. This gun was superseded by a *tsunami* of "improved" Type 14 Model Nambu, beginning in 1925. All Japanese pistols, both revolvers and semi-autos, at least to me, appear crude and awkward, as if designed in darkened rooms by groups of near-sighted engineers unable to agree with one another. The most ungainly of them all was the Type 94 semi-auto, the last made in any numbers before the end of WWII.

The Pusan Smith & Wesson revolver may have come to Korea as early as 1904, or as late as 1910. There it remained until the Japanese Empire was demolished by America and her allies. It is likely that by the 1920s the old single-action pistol had become an historical curiosity. By then it was obviously and embarrassingly too "foreign" for use if a Japanese-made sidearm was instead available. And, in any case, once the old black-powder ammunition for it ran out, the American revolver had to be retired. Obsolete long before the *Kempeitai* excesses of the 1930s and '40s, it was probably, and hopefully, never used against innocent Koreans or Chinese during the most horrific years of Japanese occupation.

The single-action Smith & Wesson crossed the Pacific to Japan in 1895 or '96, then came home again after exactly a half-century. Uncle Jack Dillon gave it to me many years later. At 119 years of age, it still resides within its country of manufacture, a unique survivor of the thousands sent over the ocean so long ago, most now vanished into the mists of time.

Close & Ready Bedside Holster Caddy

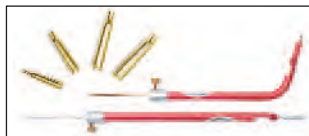

Holster NOT Included

The key to the successful gunfighters of the Old West was not so much the weapon of choice, but rather the holster. How quickly the weapon could be retrieved, aimed and fired was the difference between survival and becoming a statistic. The Close & Ready Holster Caddy provides a faster and safer way to protect your family. It works with most existing holsters and slides easily between the mattress and box springs on either side of your bed.

Attain Peak Accuracy With Hornady's L-N-L O.A.L. Gauge, Bullet Comparator

Overall Length Gauge

The initial distance a bullet must travel when fired (from the cartridge case mouth until it engages the rifling) is absolutely critical to achieving peak accuracy. A free run of .010 to .060 is commonly employed for accurate target, varmint and hunting loads. Consequently, knowing and being able to alter the dimensions, as needed, is vitally important to precision shooters and handloaders.

Replacement M2 Sensor	K83-18877	36.95

The **M2 Chronograph** comes with sensors, screens and one two-foot mounting bracket. A nylon carrying case and tripod are available options. The **CED7000 Shot Timer** is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the "next generation" Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

Cavalry Arms Medical Trauma Kits

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics.

The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll.

The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.

Personal Trauma Kit (P.T.K.)	K83-19220	\$29.95
Advanced Trauma Kit (A.T.K.)	K83-19322	69.95
