THE RUGER[®] LCP[®] CUSTOM

WIDE ALUMINUM TRIGGER • PHOTOLUMINESCENT SIGHT • STAINLESS STEEL GUIDE ROD

★ NEW

Photoluminescent Front Sight,
Drift Adjustable Rear Sight

Wide, Red-Anodized,
Skeletonized Aluminum Trigger

Polished, Stainless Steel
Guide Rod

The Ruger[®] LCP[®] Custom is a compact .380 Auto pistol designed with the shooter in mind. Affordable and comfortable, the Ruger[®] LCP[®] Custom is perfect for licensed carry for personal protection, or as a backup firearm for law enforcement. The Ruger[®] LCP[®] Custom features a polished, stainless steel guide rod; a wide red-anodized, skeletonized aluminum trigger for a lighter left trigger pull; a photoluminescent front sight for low light conditions; and a square edge, drift adjustable rear sight that facilitates slide manipulation.

Join Ruger and help us raise \$4,000,000 for the NRA.

Dillon's RF 100 Automatic Primer Filler

***Eliminates the need
for primer pick-up tubes!***

***Fills the primer tube
while you reload!***

***Clear polycarbonate shield
and protective housing***

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

We READ Our Mail!

My husband receives *The Blue Press*.... While picking up the mail and noticing the cover, I just had to say how pleasing it was to see an accomplished woman shooter, Kenda Lensigne, on the cover of the May 2015 issue. Intrigued, I read her story inside, very nice. Most often I don't even open them, but this cover girl is portrayed by an amazing woman shooter and not just the bearer of a nice set of boobs. No offense to your models but it is the image projected. Or...bit of humor, at least equal opportunity viewing, put a bare-chested hunk on there with a nice six pack. LOL

There are many women's shooting organizations out there. A new and upcoming one, "A Girl and A Gun" has gone national, check it out: www.agirlandagun.org.

Wanda Jasper – Onalaska, WA
Thanks, Wanda, but wouldn't a "bare-chested hunk" technically be just a bit MORE than "equal opportunity" viewing?

Just received your July 2015 catalog and was pleasantly surprised. The picture of the young lady on the cover for once reflected class and was not inappropriate as most come across. Keep up the class act.

Albert L. Chambers –
alc4231@aol.com

Thanks for the heads-up about the Colt M1911 laying beside the lovely Shristi (July issue cover of *The Blue Press*). All those who saw the M1911 raise your hand. Yeah, that's what I thought! None!

Allen Poland Keyser – West Virginia
If smart is sexy, July is one of THE sexiest covers ever. Hell, I didn't even notice the pistol...wondered what book she's holding, though. (How sick is that?)

Barrett Tillman – Arizona
Re: "East German Makarov Pistol – Pistole M" (July issue). I bought my Mak in the 90s too. My first shots were from a rest at 25 yards – verified by my supervisor at the police pistol range. The first four shots were in one jagged hole dead center, and the fifth shot was a quarter inch to the left. The Ammo was NORINCO ball. What a carry pistol it has been! The 9x18mm Hornady round is deadly on raccoon.

Gerald Ulrich – Dunlap, IL

Which Dillon is Right for YOU?

Page 8

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550B

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

BLAST FROM THE PAST

Reviewed by Peter Caroline

My introduction to the M1 Carbine was at Fort Dix, New Jersey, in the summer of 1957. Our Basic Training company was short a full complement of men, so we were assigned to a series of work details for several weeks until we had sufficient numbers to begin actual Basic. At one point, several of us were marched to a supply room, where we were introduced to Staff Sergeant Hatchett, a small, southern gentleman who was built like a mailbox. He set us to work removing great globs of protective cosmoline grease from a large quantity of M1 Carbines that had recently been brought out of storage. The sergeant had a wealth of information on this particular species of weapon, which he had carried in Korea. He not only showed us how to disassemble, clean and reassemble the Carbine, he also disclosed its unique history. "Men," he said, "this here's the M1 Car-been. It is called the Car-been because it were invented by a man named Car-been, while he were in prison for makin' moonshine whiskey."

About a year later, at Fort Belvoir, Virginia, I was issued a Carbine as my assigned weapon. I never actually saw it until we were sent to Camp A.P. Hill for our allegedly annual qualification. I

remember getting into a prone position. At "Commence Fire," I squeezed the trigger. There was a short burst of full-auto fire. "Cease Fire! Cease Fire! Who's the goddamn idiot?" I raised my hand. Having never been briefed on said assigned weapon, I didn't recognize it as an M2, the selective-fire counterpart of the M1. Once squared away on that minor detail, I was allowed to qualify.

After leaving the service, I owned several M1 carbines. They were quite inexpensive at the time, and surplus ammo was cheap and plentiful. In more recent years, they became costly collector's items, and the best specimens became safe queens, never to be seen on the range. Several commercial copies were available, which by and large sucked.

Late in 2014, I received word that Inland Manufacturing, in Dayton, Ohio, would be making an exact reproduction of the M1 Carbine, virtually indistinguishable from the original. At the 2015 SHOT Show in Las Vegas, I had my first hands-on encounter with this new old gun, and I have to admit, I was impressed. What's new? Nothing, and that's the point. This is an absolutely faithful reproduction of the original, just as it came out of the factory during The Big One, with even the

"THERE IS ONE MAJOR DIFFERENCE BETWEEN THIS NEW INLAND M1 CARBINE AND THE ONES I'VE OWNED IN THE PAST: THIS ONE I WILL KEEP."

THE PAST DEPT.

11

INLAND M1 CARBINE, CALIBER .30

original markings on the metal parts and the stock. In order to keep these new guns from being passed off as originals in the collectors' market, the underside of the barrel and the inside of the stock have their own special markings.

The new Inland M1 Carbines are marketed by MKS Supply in Dayton, Ohio, in three configurations: the M1 1944 wood-stocked original without bayonet lug; the M1 1945 wood-stocked original with bayonet lug; and the M1A1 Paratrooper model with heavy folding wire stock. The original 1944 model comes with a 10-round magazine, to satisfy the requirements of those states that believe that any greater magazine capacity is inherently evil. And of course, the lack of a bayonet lug protects the innocent from drive-by bayoneting. The 1945 and Paratrooper models come with 15-round magazines, and all models are equipped with a web sling and oiler. To my chagrin, Inland does not offer an M2 version, but I have learned to deal, albeit grudgingly, with disappointment.

My own 1945 model arrived several months after the SHOT Show, and it was well worth the wait. No surprises...just like the WWII specimens I'd owned, except without the battlefield or arms room dings and scratches. I collected an assortment of commercial and surplus M1 Carbine ammo and headed for my desert "range."

In terms of sighting equipment, the M1 Carbine was never intended for minute of angle performance. The rear peep sight is adjustable for elevation and windage; the front sight is a simple post

flanked by protective ears. There is no Picatinny rail or such for mounting optical sights, lasers, illumination devices or other accessories. The trigger pull is around six pounds and surprisingly smooth. From a sandbag rest on my Knothole Designs portable bench, I was able to get some nice tight little groups at 25 and 50 yards. The carbine is a joy to shoot; it eats everything...Korean War surplus, Hornady Steel Match 110-gr. FMJ, American Eagle 110-gr. FMJ, Aguila 110-gr. FMJ and assorted soft-nose hunting rounds that someone gave me years ago. It all functioned without a hiccup. For casual plinking or introducing a new or recoil-averse shooter to the centerfire experience, the M1 Carbine is a natural.

MSRP on the 1944 and 1945 wood-stocked Carbines is \$1,049. The Paratrooper Model is \$1,179. It might sound a bit steep, but then, figure what you'd have to pay for a pristine, never-issued original, if you could find one.

There is one major difference between this new Inland M1 Carbine and the ones I've owned in the past: this one I WILL KEEP. Way back when, you could pick up a surplus M1 Carbine for 20-something bucks. Not any more. I've ordered a bunch of 30-round magazines, and I'll probably pick up a repro bayonet...just because.

BL 550 Dillon's Basic Loader

\$259⁹⁵

L41-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount L41-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Square-Deal-Only Wrench	L41-19970	8.95

Dillon's Strong Mounts

increase your machine's "footprint" to over 10",

spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL550/XL650	L41-22051	\$48.95
XL650-only	L41-22052	45.95
Square Deal "B"	L41-22223	64.95

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550B and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL 1050.

Bullet Tray Kit	L41-22214	\$41.95
RL 1050 Tray Kit	L41-22215	41.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	L41-97126	\$142.95
----------------------	------------------	-----------------

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	L41-16306	\$41.95
--	------------------	----------------

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Alum. Roller	L41-17950	\$45.95
Plastic Roller	L41-22183	40.95

Quick-Change Cover for use with powder measure. **L41-11143 \$14.95**

With Dillon's RL 450 Upgrade components, you can, either all at once or one assembly at a time, upgrade your RL 450 reloader to an RL 550B!

Dillon's Case Preparation Equipment

CV-2001
L41-20493
\$188.95

CV-750 L41-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator L41-20675 \$75.95

CM-500 Case/Media Separator L41-21045 \$47.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 L41-22047 \$213.95

Euro CV-750 L41-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **L41-13804** **\$8.95**
Case (20 pc.) **L41-20255** **135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

Super 1050/RL 1050 Short Trim Die Toolhead

L41-62219
\$224.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. (NOTE: the 1050 toolhead stand is not included.)

Dillon's New Rapid Trim 1500 Case Trimmer ²³

Dillon's RT 1500 shown installed on an XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer Assembly **L41-62164** is **\$327.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (Please see chart below). Replacement carbide cutting blades, **L41-13141**, are **\$19.95** each. Upper lock rings, **L41-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Packin' Dillon's Way

Dillon's "Plan B" Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

Dillon's Concealed Carry Tote accommodates all the tools you need to survive the urban jungle!

This low-profile carry case looks like a mild-mannered-computer-nerd accessory, but it's designed for your pistol as well as your PC! Made of rugged fabric, with heavy duty zippers on all three main compartments – one designed to hold a laptop or tablet, one for folders and paperwork, and one in the middle for a handgun.

Inside the case are pockets and pouches that will hold spare magazines as well as folding knives, letter openers, flashlights, smart phones, full-sized 8.5" x 11" paper note pads, etc. Measures 13.5" x 11.5" x 6.5" deep.

Mernickle Holsters' Conceal-Carry Performance Series

If Cowboy Action Shooting is your game, why not CARRY the gun you shoot the most? These holsters can be worn strong side, appendix carry or cross draw and are fully molded. Now also available for J-Frame S&Ws.

"Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

UM Tactical Universal Sight Mount and Holster System

UM Tactical has created a universal sight mount that will fit all pistols with a 1913 picatinny rail. Although many sight mounts exist; what makes the unit produced by UM Tactical unique, is that it will mount and dismount from your firearm in under 30 seconds with no tools or gunsmithing. Once set up with your favorite scope or red dot sight, the mount and optic can be taken on and off your firearm and still hold the zero. This high quality mount is constructed from CNC machined aluminum and is finished in Mil-Spec Type III anodizing.

UM Tactical's UMH3 Universal Holster attaches to the UM3 sight mount and not your handgun. This unique design is hand made and is constructed of thermoformed plastic (Boltaron).

BLADE-TECH™

“Revolution” Holster Series

Blade-Tech used its extensive knowledge of Kydex® holstermaking to bring you the Revolution line of holsters. Using a proprietary blend of polymers, Blade-Tech has engineered these holsters to offer lifetime performance in a wide range of conditions. The holsters won't become soft in extreme temperatures (over 300° F) and won't become fragile in low temperatures.

Dillon's Pistol Die Sets

Size Die

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets 35

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Dillon Rifle Dies (Three-Die Sets)

The Beretta Pico

The Beretta Pico, left and right sides.

By J.B. Wood

Well, Beretta has finally entered the "little .380" game and the Pico is now available. The delay was likely due to the laborious process of moving a large part of the manufacturing away from Maryland's oppressive firearms regulations. In doing this, they have joined a growing number of firearms-industry firms that have left "unfriendly" states.

The word "little" certainly describes the Pico. At its widest point, it measures only 0.725 of an inch, and it weighs just 11.5 ounces. The other numbers are 5.1 inches in length, and 4 inches in height. Barrel is 2.7 inches. All of this makes it very concealable, the perfect back-up piece.

The slide stays open after the last shot. There is an external slide latch, but minimal projection makes it easier to just pull back slightly on the slide and let it go when reloading. The firing system is DA-Only, so there's no need for a manual safety. The trigger pull is smooth and quick, and it has second-strike capability, if you encounter a hard European primer.

The magazine holds six rounds. Also supplied, with my sample gun, was a spare magazine with

a generous finger extension floorplate. It gives a much better hold, but would detract from the concealability. The ambidextrous magazine release is at the lower rear of the trigger guard, and is pushed downward. No chance of inadvertent operation.

Like several of the other small .380 pistols, the Pico is a locked-breech design. The squared-off rear section of the barrel locks into the large ejection port in the slide, and the barrel is cammed downward to unlock as the action opens. The advantage of this, in a tiny .380, is that there is less felt-recoil. In the Pico, this factor is brisk, but not painful.

On a personal defense pistol of this type, sights are not of huge importance. However, if there's a need to take careful aim, these are excellent. Three big white dots and a square-post/square-

For cleaning, the Pico easily field-strips into these components. Take-down and re-assembly are simple.

The spare magazine has a comfortable finger extension.

An external latch holds the slide open on the last shot.

notch picture. The rear notch is quite large, for easy eye pick-up of the front sight. Loosening an Allen screw allows lateral adjustment of the rear sight in its dovetail mount.

Other little good points include a smooth, rounded trigger with no serrations, and the fact that there is no annoying magazine-disconnect safety. The metal parts are mostly stainless-steel, and the grip-frame is high-tech fiberglass-reinforced polymer. According to the manual, occasional use of Plus-P ammo is no problem.

Trying out the Pico at the range, I used 90-grain JHP loads from Black Hills and CorBon. Distance was the classic 7 yards, standing, and two-hand hold. All groups were well-centered in the 8-inch black of the Champion VisiShot tar-

gets, and were mostly 3.5 to 4 inches. No malfunctions, of course, it's a Beretta.

Takedown for cleaning is easy. On the right side of the frame, the thing that looks like a wide-slotted screw is the disassembly latch. A quarter-turn counter-clockwise, (magazine removed), and the slide and barrel assembly can be moved off toward the front. The recoil spring unit and the barrel are then taken out of the slide. On re-assembly, the retaining latch will automatically reset, a nice touch.

The Pico comes in a padded nylon zipper case with internal pockets for the pistol and spare magazine. The suggested retail price is around \$400, and this makes it a Beretta bargain. Quality and features of this sort will usually cost quite a bit more.

40 12 Gauge Shotshell Tactical Strippers

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device

(C. & D.) that will accommodate up to a 2-1/4" duty belt.
A. Six-Shell Tactical Stripper **L41-18606 \$23.95**
B. Four-Shell Tactical Stripper **L41-18605 22.95**
C. Three-Shell Aluminum Stripper* **L41-19475 34.95**
D. Six-Shell Covered Tactical Stripper **L41-19225 33.95**
**Three-Shell Aluminum Stripper accommodates 2-3/4" shells only.*

AP Custom USA Shotshell Carriers/Caddies, Mag ID Kits

AP Custom USA's Shotshell Caddies are 100-percent machined from solid billet aluminum. The **4x4 Shotshell Caddy** holds four 2-3/4" 12 Ga. shells in two adjacent slots. The 4x4 is designed for loading four shells at once, either strong- or weak-handed. The **3x3 Shotshell Caddy** holds three 2-3/4" 12 Ga. shells in two adjacent slots.

The **QL/4 Shotshell Carrier** is a four-round 12 Ga. "quad-load" system consisting of a single QL shell carrier mounted to an adjustable billet aluminum backer plate on a Blade-Tech Tek-Lok. The QL/4 backer plate allows the shooter to adjust the angle of the QL to his or her liking. The backer plate is also drilled and tapped to accept Safariland ELS and Blade-Tech MOLLE attachments. The **QL/8 Shotshell Carrier** is an eight-round 12 Ga. "quad-load" system consisting of a two QL/4 shell carriers.

AP Custom USA's **Mag ID Kits** enable you to color code and number your P-Mags and pistol magazines.

TACCOM, LLC Tactical and Competition Accessories

TACCOM, LLC's Duaload Shotshell Holder is available in 2-, 4-, or 6-Shell versions and can be customized to carry your shotgun ammo in several configurations. The 2Up version can be either attached to a belt or MOLLE gear, and the 4Up and 6Up versions feature a **BLADETECH Tek-Lok™ Universal Belt Clip (included)** that can be attached at various angles. The Duaload allows you to grab two shotshells aligned in such a manner that it makes it easy to load two at a time into your shotgun.
2Up Belt/MOLLE **L41-19530 \$9.95**
4Up w/Tek-Lok™ **L41-19531 29.95**
6Up w/Tek-Lok™ **L41-19532 34.95**

TACCOM, LLC's Quaload Shotshell Holder is a serious game changer! It's so radical that they are patenting the device. The Quaload holds the 2 columns of shells next to one another, you can't get any closer than having them touch. No other quad load device can do this! This allows for you to control how the shell come out of the holer and not have to worry about rim overlay...the rims are already overlapped in the correct position!
4Up Quaload Shotshell Holder **L41-19543 \$39.95**
8Up Quaload Shotshell Holder **L41-19544 69.95**

CLASSIC FIREARMS: The Savage

By John Marshall

If you look up the word “versatile” in the dictionary, I wouldn’t be surprised at all if you would find a picture of a Savage Model 24 over/under combination rifle/shotgun. As a “do all” field or survival piece, it has great utility. Specifically, depending on the chamberings of a particular gun, it can handle medium-sized game and birds. With slugs in the shotgun chamber, even downing larger game can be possible. Grabbing this one gun and some ammo out of your car or truck will give you a lot of capability still not easily matched by any other firearm. Although rifle/shotgun combinations have been common for a long time in Europe, for many years the Savage 24s were the only similar guns available in the United States. The history and details on this gun are quite muddled, particularly since there have been so many variations and designations. Even Savage Arms has been unable to give much in the way of information. I found it challenging to research the Model 24, and I’m glad to reveal a few of its mysteries here.

As a bit of background, we need to go back to the Stevens Arms company, which was founded in 1864. One of its more noteworthy achievements was the invention of the .22 Long Rifle cartridge in 1887. This round is now the most popular cartridge in the world. Stevens was bought in 1920 by Savage Arms, and the two companies merged their management and manufacturing capabilities. Firearms were marketed under both names, and this practice continues to the present day.

In 1938 or 1939, a Stevens combination gun was introduced, manufactured in Chicopee Falls, Massachusetts. It was called the 22-410 for the simple reason that it was an over-under design in which the top barrel was chambered for .22 Long Rifle, and the bottom for the .410 3-inch shotshell. Weighing about 6-1/2 pounds, it had a 24-inch barrel and had open sights that were similar to those common on most .22 rifles of that era. It was a traditional break-open design, with a top lever that could be pushed to either side to open the

breech. A sliding button on the right of the frame was pushed up to select the .22 barrel or down to pick the .410. The button moved a connecting piece that would transmit the blow of the hammer to the appropriate firing pin. The barrels had separate extraction mechanisms. The bottom one was a cam-operated extractor, while the one for the upper barrel was spring powered. Opening the breech would activate both. Some early guns had Tenite™ stocks and fore ends. This early plastic material could be brittle, and broken stocks were unfortunately common.

During World War II, some of these 22-410s were issued to the U.S. Army Air Corps to be carried on aircraft as survival guns for downed crewmembers. Most of these were marked with an ordnance “flaming bomb” stamped on the receiver near the hammer, which was the only thing distinguishing them from civilian arms. A full-metal-jacket .22 LR projectile was designed and issued to comply with the Hague Accord provisions against expanding bullets. Some later-issue guns were marked “USAF” on the bottom of the receiver when the Air Force became a separate service.

In 1950, the Stevens 22-410 became the Savage Model 24. It’s interesting that around 1960 the Model 24 became the first long gun that could be had with a .22 Winchester Magnum barrel. Most other rimfire rifle actions didn’t have the requisite length, but with a break-open design, this chambering was no problem. Around 1962, the Model 24’s side-mounted sliding selector was replaced. It was found that the detent became weak, and the selection function became less than positive. The new system was a hammer-mounted selector. This could be tilted up or down so that an integral projection on the device would impact the selected firing pin. The selector was marked with up and down arrows for clarity. Older guns could be retrofitted with the new selector hammer. Additionally, finding that the .410 chambering lacked power, Savage changed the lower barrel to 20 gauge three-inch. Other changes were a dull nickered receiver,

Savage Model 24 Combination Gun

“It was never glamorous, and not particularly ‘tacticool,’ but nonetheless, it has proved its worth for decades....”

impressed checkering, and a Monte Carlo comb on the stock. This was designated as the Model 24 DL. Not long thereafter, the top .22 barrel was grooved for tip-off scope mounts, permitting the use of a telescopic sight. While somewhat at odds with the gun's shotgun capability, a scope could also prove useful for slug loads.

In 1964, Savage redesigned the opening mechanism and transitioned to a lever on the right side of the frame. This was not liked and the system was soon canned. Beginning in the late 1960s, features such as separated barrels, optional 12 gauge chambering, plastic stocks, camouflage coats, a monobloc breech, and centerfire rifle cartridges were introduced.

Around 1980, the .22/.410 variations featured an opening lever at the bottom of the receiver in front of the trigger guard. This was the Model 24D. Production ceased for this model in 1987.

A bewildering variety of Model 24s has ensued dating from the 1960s, and the model designations are also many and confusing. It's beyond the scope of this article to sort them all out, but here are the combinations that have been offered, in no particular order: .22LR/.410, .30-30/20, .22 WMR/20, .222/20, .223/20, .22 Hornet/12, .223/12, .22 Hornet/20, .222/12, .22LR/20, .17HMR/20, .357 Magnum/20, .357 Maximum/20 and .30-30/12. The 24C model was the “Camper” variation with 18-inch rather than 24-inch barrels. It was a .22LR/20, bored with a cylinder choke instead of the normal modified configuration. It also had compartments for ammunition in the stock. A factory cartridge sling and a carrying case for the taken-down gun were also available.

The gun illustrated is a fairly typical Model 24V, series C. It was originally chambered for .222 Remington over 20 gauge, but the upper barrel has been rechambered for the more available .223 Remington. Manufactured in 1963, it has typical Model 24 features – impressed checkering and a Monte Carlo stock. The top barrel has a sight block that's factory drilled and tapped for a scope base,

and it's equipped with a classic Weaver K-1 scope (no magnification). This scope allows precision sighting of the rifle barrel, but can be ignored for shotgun use.

Takedown of the Models 24 is very typical of most over/under firearms. If a screw is located in the middle of the forestock, it must first be loosened. Then the front of the forestock is pulled downward. It can then be slid forward and out from under the barrels. The action must then be opened fully, and the barrels pushed forward and off of the receiver. Assembly is simply the reverse of this procedure. No further disassembly is necessary or desirable for cleaning and lubricating.

Dating the year of manufacture of a specific Model 24 is difficult except for guns made in a span between the years 1949 to 1970. In these years, a letter and a number may be stamped within an oval at various places on the gun. The number is inconsequential, but the letter is coded to the year of manufacture as follows: A=1949, B=1952, C=1951, D=1952, E=1953, F=1954, G=1955, H=1956, I=1957, J=1958, K=1959, L=1960, M=1961, N=1961, P=1963, R=1964, S=1965, T=1966, U=1967, V=1968, W=1969, and X=1970. I emphasize that although this is the normal pattern, exceptions do exist. For example, the 24V series C illustrated, just has the letter “P” stamped on the frame – no oval and no number.

As of 2013, Savage Arms was bought by the ATK Sporting Group. The Model 24 is no longer listed in the Savage catalog, making it only available as an out-of-print item in the secondary market.

The Savage Model 24 had a long history, with origins dating back over three quarters of a century. It is an unusual design in the United States, but a more useful and versatile gun could not be imagined for field and survival applications. It was never glamorous, and not particularly “tacticool,” but nonetheless, it has proved its worth for decades in the singular niche that it carved for itself. It could very well be the best single firearm to take along on outdoors excursions!

46 Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Berry's Mfg. Pan Sifter

L41-17519

\$9.99

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mms. Made in the USA and comes with a lifetime warranty.

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

The Threat H

By Barrett Tillman

Your five-shot revolver may not be enough anymore.

On May 3 two American-born Islamic radicals attacked a public gathering near Dallas. They engaged police in a rifle-versus-pistol fight that was won by a 60-year-old traffic officer who knew how to use his .45 cal. Glock, though SWAT was involved. Both of the self-proclaimed mujahideen [“those engaged in jihad”] were killed; a school guard was wounded.

The attackers, whose names are irrelevant, were not starry-eyed kids. They were self-motivated lone-wolf assassins in their thirties, and they lived in Phoenix. Press reports stated that they had pledged loyalty to ISIS, which later attributed credit to “two soldiers of the caliphate,” for whatever that’s worth.

The Garland incident followed the January attack on the controversial *Charlie Hebdo* magazine in Paris, resulting in 12 dead and about as many wounded. Those attackers, also in their thirties, were subsequently found and killed.

Both incidents involved depictions of the prophet Mohammad, whose image is banned due to Islamic aversion to idolatry. Organizers of the Garland event drew criticism from liberals who considered the prize for a picture of the Prophet equal to trolling – ensuring a violent response. Defenders of Americans’ freedom of expression thought otherwise, and there’s no middle ground.

None of which need concern us overmuch. Sunni and Shia Muslims probably have slain far more Sunni and Shia Muslims than either has killed infidels. But jihadists and others do not need a specific reason to target Americans or westerners. They *will* try again.

After Garland, ISIS announced that it had 71 “trained soldiers” in as many as 15 states and

would commit them to the jihad. It’s probably impossible to know, but Paris and Garland certainly lend credence.

The Garland event was held at the Curtiss Culwell Center, owned by the school district. Certainly it was a potentially target-rich environment, with 6,800 seats. Its website makes no mention of firearms, pro or con. But apparently few if any of the attendees were armed because reportedly their response to gunfire was merely to sing the national anthem....

Lessons Learned

So what can we learn from Paris and Garland?

For starters, the S&W J-frame in your fanny pack probably won’t cut it these days.

Many Dillonites routinely carry a “groceries gun” – a small gat that fits in a pocket or non-standard conveyance, often without a reload. It’s probably adequate for the high-percentage confrontation: a random encounter at conversational distance in a store or on the street.

It is not optimum for a focused attack

by jihadists or a mob of any origin.

Without delving into the legal complexities of shooting “unarmed teenaged assailants”

(who kill hundreds of Americans annually), let’s concede that more ammo equals better. And here’s why:

The jihadist attacks involved dedicated assailants armed with rifles and, if we can believe the press, body armor. (Frequently the media cannot distinguish between armor and load-bearing “tactical” vests.)

The engagement distances were far more than across the cafeteria counter or even across the convenience store lobby. Film from Paris showed attackers shooting well down a street, and a detailed account from Garland said the effective police officer engaged from 20 yards down to 10.

as Changed ⁴⁹

Most “civilian” mass killers stop or self-destruct when they encounter resistance. Religious zealots do not. They expect to kill or die fighting. Reportedly the same applies to drug cartels insistent on making a point.

So: assume you will face two or more determined killers at medium to long range for a pistol, and they may wear armor. How many rounds do you need to end the fight?

Damn sure more than five.

How accurate are you under stress? Can you make an all-or-nothing head shot across the street – maybe 25 or 30 yards?

In a gunfight you might get shot. You don’t quit, but how’s your one-handed ambidextrous shooting?

Clearly, a three-round Mozambique Drill might not solve the problem. And six or eight rounds may not be enough. That’s why some confirmed single-stack .45 guys are converting to double-stack 9mm or .40 cal. With today’s quality ammunition, increasingly it’s more about placement than bullet size. My Para-Ordnance Lightweight Commander is spooky accurate, but a double-column looks attractive.

Carry Modes

Many shooters prefer “off body” carry for convenience – no strapping belts, holsters, and mag pouches on and off. Contrarily, a Safepacker (wildernesstactical.com) is handy, practical, and fits almost any likely scenario.

But it doesn’t fit them all. And it can never be as fast as the holstered pistol under your shirt.

While scenario shopping, consider the assassins’ perspective – what’s an optimum location? Someplace where the victims are crowded, offering dense targets amid low mobility. Like a restaurant. (Remember the 1984 San Ysidro McDonald’s and 1991 Killeen Luby’s, both with 20 dead.)

In a safe area I sat at a table in a chair with arms on both sides. With the Safepacker open on

my lap, I could draw and hit a seven-inch target at ten yards in 3.3 to 4.3 seconds. Condition One or Three didn’t matter much – you can chamber the round on the upswing.

The same start position with a cocked and locked 1911 yielded hits in 1.3 to 1.5 seconds. For you number crunchers, the median difference was 39 percent faster from the holster, with far less fumble factor. That may seem small in actual time but in relative difference it’s huge.

(Note: in a crowded, frantic situation you are bound to cover no-shoots with your muzzle, which is why Rule Three is so important.)

I chose that scenario for its complexity, and to minimize the difference between off-body and “on body” carry. Additionally, a reload is far handier from the belt than from the Safepacker, which easily could run five lethal seconds.

Meanwhile, you may want to expand your options beyond a handgun. A friend often carries a Ruger 10-22 in a zippered tennis racquet case. He routinely makes fast, offhand 50-yard head shots on IPSC targets. Another sportsman

reportedly uses the same carry mode for a compact AR-15.

Of course, not everyone lives in Free America. We Arizonans can legally carry concealed almost anywhere, and with a CCW we can carry where adult beverages are served. (Meanwhile, there still have been no liquored-up Long Branch Saloon shootouts, just as we predicted.) But since mass murderers prefer gun-free zones – recall the Colorado movie theater – you can guess where you and your loved ones are most vulnerable.

Whatever your preference, it’s vital to analyze your options and to practice. Get quality training – it’s the best insurance available. But perhaps more than anything, make the attitude adjustment. They’re here, folks. They walk among us, and the initiative is always theirs.

Be aware, stay alert – and practice.

50 "Big Fifty Reloader"

STANDARD FEATURES:

- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2"-12 UNF Thread Dies

Dillon's New Bench Wrench Fits new 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

1" Dillon Die Lock Ring L41-14067 \$1.35

5-Pack of Die Lock Rings L41-10669 4.15

1" Dillon Bench Wrench L41-10842 7.95

Comtech's STINGER

THE STINGER:

Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger today!

L41-19495 \$9.95

Take out your frustrations, and build your grip strength at the same time! Just think about...oh, socialized medicine, tax increases, high-capacity magazine bans, etc.

1 lb. L41-15532 \$7.99

2 lb. L41-15533 \$14.95

Note: These Come in Assorted Colors

ElZetta

Tactical Flashlight Mounts

Every ElZetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the ElZetta® ZFL-M60. (Sizing Adapters are not required when using an ElZetta ZFL-M60 or other 1-inch lights.) The ElZetta ZSM is made from the same advanced glass-reinforced polymer that has proven itself in the popular ElZetta ZFH1500.

The NEW ElZetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the ElZetta ZFL-M60. The ElZetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

The California Competition

The author's carry Glock 17 has had a California Competition Works mag funnel installed.

By Duane Thomas

The Glock is, in stock form, actually one of the easier auto pistols to speedload. It has a taper top doublestack magazine and a comparatively large mag well opening, complete with bevel. Also, we have the option of installing a Pearce grip frame plug to fill in the hollow cutout at the bottom/rear of the mag well, which can hook into the extractor groove of the top cartridge in a fresh magazine and stop a speedload cold. The Pearce plug fills in that problem area, and forms, in effect, an extremely low profile mag funnel. I would never say that someone simply running a Glock mag well stock but for a Pearce plug was doing things "wrong." However, there is still room for improvement in this area. That's where the Glock mag funnel from California Competition Works comes in.

In contrast to some of the hideously oversized Glock mag funnels on the market, the CCW (gotta love any company name with those initials) is quite low profile. According to my ruler and finely calibrated eyeballs, it adds a whopping 1/8" to each side of the Glock butt, and halfway between 1/8" and 3/16" (dusting off the old math skills says that's 5/32") to its length. That last measurement is shorter than the protrusion of a magazine with stock baseplate when snapped into the gun, so in effect the CCW mag funnel [See Page 59] adds no length at all. This is a Glock mag funnel small enough that a gun so fitted could be carried concealed – and I say that as someone doing it.

The method by which the CCW funnel affixes is rather clever. Inside the funnel (which is machined from Delrin®) at the rear, an angled piece of metal (anodized aluminum) inserts somewhat snugly – I say that in positive sense – up into the hollow area

behind the Glock mag well. A screw located on the bottom of the funnel travels up through the funnel body into the base of the angled metal insert. After the funnel is inserted over the end of the grip, that screw is tightened down, causing the angled, forward edge of the metal insert to pull UP on the mag funnel, snugging it securely into place. Then another screw, located at the rear of the metal insert, and travelling through the lanyard hole in the grip, is also tightened down and snugs the funnel into place front to rear. Simply tightening those two screws results in an impressively solid feeling funnel installation.

The bottom of the heel of my master hand does come over and touch that rear screw on the CCW funnel when I grip the gun. You would think that would be uncomfortable, if not injurious. The truth is it's so comfortable I don't even notice it's there.

Unlike some Glock mag funnels I have tried, the CCW funnel aligns with the mag well so nicely you don't really NEED to fill in the holes in the frame – one to the rear on all Glocks, also one in the front on older guns – the CCW works anyway. However, again there is room for improvement. J-B Weld makes several sorts of epoxy that can be used for "fill" jobs like this. After comparing all their options I chose the J-B SteelStik, so-called because the material is actually steel reinforced for a high tensile strength.

I filled in the holes by pressing SteelStik into them with my fingers, then flattened and shaped it with a high tech butter knife. According to J-B, the SteelStik epoxy sets in 5-6 minutes. Don't you believe it. The material does become considerably harder than its initial putty-like consistency after that time; however, it can still be shaped – or

Works Glock Mag Funnel

A piece of metal, flat and angled in front, round at rear to fill in the hollow area behind the Glock mag well, serves to snug the funnel into place horizontally.

A screw at the rear, traveling through the lanyard hole, snugs the funnel into place vertically.

Note that even a short, stock Glock magazine baseplate protrudes farther than the length of the funnel, so in effect the CCW funnel adds no length to the loaded gun.

Unlike some other Glock mag funnels, the CCW gives sufficient clearance around baseplates to easily snap magazines into place. Arredondo +3 shown.

On older Glock's like the author's Gen-3 G17, there is a cutout at the bottom of the frontstrap.

Here that hole has been filled in with J-B Weld SteelStik.

There is a hole at the bottom rear of the Glock mag well. Note how the screw does protrude slightly into the mag well.

Here is what that hole looks like after being filled with and covered over by J-B SteelStik. The screw has now been trimmed so it no longer protrudes into the mag well.

deformed – for a considerable period thereafter. I would suggest waiting a full 24 hours after applying SteelStik before you begin practicing speedloads, unless you don't mind putting divots in your mag well fill. The SteelStik fill job I did here is not the prettiest thing in the world – but y'know, it works well.

I honestly thought that simply installing the CCW funnel resulted in pretty darn slick speedloads, noticeably faster and easier than having no funnel at all. After the SteelStik fill, it actually became a WEIRD experience to speedload this gun – my carry Glock 17 – because it felt TOO easy. Wasn't there supposed to be some drag in there somewhere? Where was the resistance?

The CCW mag funnel affixes in front by having a triangular hollow fit over the bottom of the Glock frontstrap. This means the funnel covers about half the bottom finger groove. But that's okay, since the bottom finger groove on a "medium frame" Glock Gen-3/Gen-4 is about twice as tall as the other two grooves. Ever notice that? You still have enough room for your little finger. And while I thought just the simple install with no epoxy felt secure, further sticking (literally) the mag funnel in place with epoxy takes the feel from "secure" to "rock solid."

Should you want to remove the mag funnel – though I can't imagine why you would – it actually is possible to deliberately break the funnel free. I say that as someone who removed what I can only describe as a lesser mag funnel to install the CCW.

The CCW mag funnel works with the "service/medium" frame size Glock's (G17/22/34/35 etc.) but not at all well with the compacts (G19/23 etc.). The funnel dimensions that align so well

with the service sized guns' mag wells don't align at all with the compacts'. And while covering over the bottom half of a G17's bottom finger groove is no big deal, it is indeed a big deal with the G19's much smaller bottom finger groove.

Something I like very much about the CCW mag funnel, compared to certain other mag funnels out there, is that it doesn't make the gun extremely picky about which aftermarket floorplates you can run on your magazines. The only aftermarket jobbies I found with which the CCW would not work were the ovoid Tango Down Vickers, where the sides of the floorplate stick out considerably farther than stock. On the other hand, my Arredondo and Taylor baseplate equipped mags all snapped into place easily.

The one negative comment I might make about the CCW funnel is that the bottom screw does extend a bit into the mag well, and that can hook on a magazine during a speedload. That's an occasional thing but irritating. I trimmed the screw down after installation – thank you, Mr. Dremel – and did away with THAT problem.

Sadly, the CCW funnel is not available for Gen-4 Glock's; the aluminum insert is too large to fit into the smaller hollow behind the Gen-4 mag well. Since I actually prefer the Gen-3 that bothers me not at all. It's sad for Gen-4 fans, though.

The CCW mag funnel really is a better mouse-trap. It's not big enough to make a difference in concealed carry. It IS big enough to make a difference during a speedload. It can work with a simple install, but with an epoxy fill and a slight screw trim, it really comes into its own. I'm glad I have one on my carry gun.

Extra Loading Data Labels, L41-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em - you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools - the list is endless.

Bore-tips® Bore Cleaning Foam Swabs

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!"

The Bore-tips Swabs REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform appli-

cation of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

The Larry™ 8 LED Pocket Work Light

The Larry™ 8 LED Pocket Work Light is the essential handyman light. 8 powerful LEDs provide 60 lumens of bright white light. The rotating magnetic clip gives you convenient hands-free lighting. The reinforced plastic body design is shock-proof and water-resistant, making the Larry™ basically indestructible.

L41-15432 \$9.99

Baschieri & Pellagri 12 Ga. Target Slug

Streamlight's Nano Light® LED flashlight is super bright (10 lumens), can be seen a mile away, is made of virtually indestructible machined aluminum with an anodized finish, is weatherproof, nearly weightless and fits on your keychain or zipper pull tab!

L41-19942 \$11.95

The Kershaw Nerve has 3-D machined G-10 scales that provide a great grip without roughing up your pocket. Jumping on the back of the handle and in the index-finger contour further enhances grip. It's made of 8CR13MoV stainless steel with CNC-machined G-10 scales, a liner lock, and a 3-1/8" blade.

L41-15391 \$19.95

KEEP YOUR GUNS! (Clean)

Product is color-coded by caliber. White shown here for clarity only.

Bore Snake, the "World's Fastest Gun Bore Cleaner™" from Michaels of Oregon is a better way to clean handguns, rifles and shotguns. Originally sold as a field tool, this product is popular with gunsmiths and benchrest shooters as well. *Try one and you'll be hooked!*

-------	------------------	----------------

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

L41-13128	\$12.95
------------------	----------------

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is for use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	L41-15571	\$7.95
Slide-Glide Lite	L41-15572	7.95

Microlon UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

L41-75125	\$9.95
------------------	---------------

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

Dewey's AR-Link Cleaning Pin

utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

L41-18599 \$14.95

California Competition Works' Tandem Tactical Stripper

Sorry, Baschieri & Pellagri target slugs not included.

California Competition Works' Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

Adjustable Target Sight for 1911s

This Adjustable Target Pistol Sight is precision machined and fits in a standard "Bomar slide cut." Yeah, the services of a gunsmith are required to cut the slide (unless your 1911 pistol already has a Bomar cut) but the results are worth it.

Adjustable Pistol Sight L41-18210 \$53.95

Secure Firearms Products' Universal Spring Tester will help you determine if the recoil spring in your pistol needs replacing, and you'll save time and money by testing and organizing loose recoil springs in your shooting bag.

Recoil Spring Tester L41-15305 \$39.95

MAGPUL 1911 Grip Panels feature reinforced polymer construction and a unique diamond-shaped cross section to prevent twisting in the hand. They also have an aggressive mag-release cut out and are compatible with ambidextrous safeties.

HIPERTOUCH®
24C
AR 15/10 Fire-Control

The HIPERTOUCH® 24C is the competition version of high precision fire-control drop-ins for installation in AR-15® and AR-10® type rifles.

L41-11816
\$235.00

HIPERTOUCH® 71
24 3G
AR 15/10 Fire-Control

The HIPERTOUCH® 24 3Gun, or 24 3G, is similar to the 24C, but with a curved trigger bow instead of straight, for installation in AR-15® and AR-10® type rifles.

L41-11819
\$225.00

HIPERTOUCH® Fire-Control Groups have uniquely solved two problems with stock AR triggers and AR trigger upgrades respectively: 1) High Trigger Weight, and 2) Low Hammer Fall Energy.

Trigger Weight: The real culprit behind high trigger pull weight is high sear impingement force that produces high friction. To get around that, the stock "AR" trigger and toggle mechanical advantage was changed and the toggle spring feature added to reduce the impingement force on the trigger sear.

Hammer Fall Energy: HIPERTOUCH® features the unique toggle spring functionality that reduces trigger

weight, but while doing so, it also increases hammer fall energy by over 35 percent over the MIL-spec stock design and every trigger upgrade in the market. This permits the shooter to ignite hard MIL and foreign primers as well as hard to ignite .22 rimfire ammunition.

HIPERTOUCH® FCGs retain Eugene Stoner's design of simple elegance while remaining very robust, without the gritty feel. Shooting for high accuracy is no longer an almost impossible chore. It's no longer necessary to improve the stock performance by manually polishing the high-friction trigger and hammer sear surfaces, where the end result was only marginally better anyway.

TACCOM, LLC .22 Rimfire AR Components

TACCOM's **Enhanced Firing Pin** for Ciener/CMMG .22 Long Rifle AR-15 caliber conversions is a direct-replacement firing pin, made from 17-4 SS heat treated to a condition H900, to present a tough, hard firing pin that won't break or mushroom out after many firings. The tip has been designed to stick out of the hole only .030", so you will not damage your barrel by dry firing your weapon.

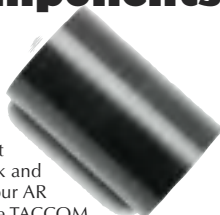

L41-19538 \$13.95

The TACCOM **Extreme Extractor** is a drop-in part for your Ciener/CMMG .22 Long Rifle insert that will give you consistent extraction, which is KEY for a reliable firearm. This will help with your live-round extraction, depending on how well the factory has cut the chamber, and the type of chamber cut.

L41-19539 \$10.95

Does your .22 Long Rifle insert

move back and forth in your AR upper? The TACCOM **Pressure Plug** will apply a constant pressure on your insert, always keeping it in the most forward position when the rifle is in battery. You can install and remove the pressure plug in seconds with no tools.

L41-19533 \$7.95

M-16/AR-15 BUTTSTOCK CLEANING KIT

In "MIL-SPEC Speak," this is a KIT, CLEANING, BUTT STOCK M16A2 RIFLE, which contains: ROD, CLEANING, SMALL ARMS; M1 TE3; CASE, SMALL ARMS ACCESSORIES; BRUSH, CLEANING SMALL ARMS; BRUSH, CLEANING SMALL ARMS; BORE; BRUSH, CLEANING SMALL ARMS; CHAMBER; AND BOTTLE ASSEMBLY LSA 5 OZ. It just doesn't get much more MIL-SPEC than that.

L41-15383 \$14.99

Adjustable M1/M1A Gas Systems

All Schuster Mfg. Inc. adjustable gas plugs are made in the U.S.A. from hardened tool steel, Parkerized and feature a lifetime factory warranty. By adjusting the volume of gas, you change the speed of the op rod and the barrel harmonics. If you're working up your own handloads, a quarter of a turn WILL affect your group size. Includes instructions and the adjustment tool (Allen wrench).

Bushnell Trophy TRS-25 Ultra Compact Red Dot Sight

Bushnell's Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell's high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute of angle dot.
TRS-25 **L41-11643** **\$89.95**

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle **L41-25374** **\$79.99**
Scout Scope Mount for SKS Rifle **L41-25373** **78.99**

PRIVATE DILLON

Figure 1: Weapons platoon of Love Company, 315th Infantry Regiment, 79th Division, near Bochum, Germany, in April 1945. Private Richard H. Dillon leans against the fence at far right, his .30 M1 Carbine slung muzzle down, and looks over his shoulder at the camera. Russian DPs (Displaced Persons) are behind the fence. Wounded in France in October 1944, Dad still had trouble standing. *U.S. Army Photo.*

By Brian Dervin Dillon, PhD.

As the Nazis took power first in Germany, then in countries unfortunate enough to be their neighbors, the Hollywood symbol of the evil Hun became the Luger pistol. Incognito German spies up on the silver screen in the late 1930s could not conceal their true identities once the telltale Lugers were in their hands. So, for an entire generation of American teenagers, who ended up killing Germans in France, like their fathers had in the previous war, a captured Luger became the ultimate ETO GI status symbol, a trophy equivalent to an Apache's enemy scalp. Of the many millions in the American Army during WWII, only a third served as ground forces in active theaters, and many fewer in combat, yet every last one wanted a Luger. If you brought one back from Europe, it was silent testimony that you had really seen the elephant, and paid your dues. My Infantry Private Dad and Armor Officer Uncle Jack (*Blue Press* No. 266) both fought their way across Europe in 1944-1945. For a while both Dillon brothers were even in combat in close proximity to one another within Patton's 3rd Army. Both were WIA, and both brought Lugers home to California. Neither one came cheap: both were paid for with blood.

One of the Dillon family Lugers was given to a close friend, a U.S. Navy Destroyer officer whose long Pacific War gave him absolutely no chance of ever finding one himself. The other (Figure 2) remains in the family. It was made by Mauser (S/42) in 1938, and all numbers (barrel, frame, receiver, etc.) match. The holster, made in Berlin by A. Fischer, is a second-generation recycle, as it is dated 1933; it retains the original-issue takedown tool, and spare magazine. The owner's name, "Druffel," is inked inside the flap. The two magazines are mismatched; one with an aluminum terminal, the other, older, one is hardwood.

My father, Richard H. Dillon, was born in Sausalito, California, in 1924, the youngest of four

Army brat brothers. His dad was a career soldier, a mustang officer, and the local small-town war hero. Grandpa Dillon filled their home with his own WWI souvenirs (*Blue Press* Nos. 253, 255). Dad graduated from high school in June 1941. A straight-A student, school paper columnist and on both the track and rifle team, because of his Black Irish background and Spanish fluency his nickname was Duke Lopez. He began at the University of California, Berkeley that fall at age 17. In January 1943, as soon as he turned 19, Dad was drafted into the U.S. Army. After basic, like most "college boys" he was selected for Army Air Corps training. After soloing in his single-engined Taylorcraft, cadet pilot Dick Dillon flunked navigation, flying to Springfield Missouri instead of Springfield Illinois during his final evaluation flight. Washed out of the Air Corps, Dad now trained as a mortarman, and was posted to the 100th Infantry Division, a state-side repple-depple. Then he was sent overseas as a combat casualty replacement to the weapons platoon of Love Company, 315th Regiment, 79th Infantry Division.

The 79th was an old WWI unit that had fought in Alsace-Lorraine in 1918. There it adopted the distinctive, double-barred, Cross of Lorraine as its divisional symbol. Recent historians and movie-makers have glorified some ETO combat units like the Rangers and Airborne at the expense of older infantry divisions, like the 79th, that fought in not one, but both European wars.

Remarkably the Cross of Lorraine Division fought on some of the very same French battlefields in both 1918 and in 1944. The 79th was beloved by the French, not the least because its divisional symbol was shared with the FFI – the French Resistance – and the 2nd French Armored Division. The 79th Infantry Division came ashore at Utah Beach on D+8 as part of the American 1st Army's 7th Corps under Lightning Joe Collins, and immediately headed north, towards the German stronghold of Cherbourg. After weeks of

GETS HIS LUGER ⁷⁹

Figure 2: One of the two Lugers the Dillon brothers captured in WWII, with issue holster, spare magazine, and takedown tool. Arranged around this battlefield trophy are a “tip of the iceberg” sample of things from Private Dillon’s second, 1945, wartime collection, spread out over his GI wool blanket. His first collection was lost when he was badly wounded in France in October 1944. Clockwise from top left: German Panzer postcard sent home to Grandma Dillon in Sausalito on April 5, 1945, with Silver High Ranking Combat Police Officer’s Cap Badge superimposed; golden oak leaf (First Prize) for Nazi Party athletic competition; post-liberation postcard lampooning Hitler, from Eindhoven, Holland, sent home to Grandma Dillon on March 24, 1945, with large and small enameled Nazi Party Member pins superimposed; German portrait postcard of Generaloberst Hans Guderian, sent home to brother Gene on May 13, 1945, with WWI Iron Cross (lower left) and WWII Iron Cross (upper right) superimposed; Luftwaffe Flak Badge; 1941 German Wehrmacht machine-gunner postcard, sent home to Grandma Dillon on May 27, 1945, with two Waffen SS “totenkopf” or skull and crossed bones cap badges superimposed. At bottom center and right are Dad’s serviceman’s pocket Bible and rosary, a Christmas 1943 gift from Auntie Alice Brennan, carried throughout the war, and his dog tags. *Dillon collection and photo.*

hard fighting, the division captured the city, the first Channel port to fall to the allies. Then, in early July, it changed direction, now heading southwest, fighting towards La Haye du Puits, then St. Lo.

By early August, Patton and his armored divisions had arrived in Normandy. Now assigned to the XV Corps of the U.S. Third Army, 79th Division soldiers hopped aboard his tanks for the breakout after the German defeat at Avranches. Racing across central France, providing infantry support for Patton’s armor, the 79th was the first to cross the Seine below Paris on August 19th, six days before the liberation of the French capital. Shortly afterwards, hooking around to the northeast, the 79th tied with another division as the first to reach the Belgian border. The Cross of Lorraine troops now turned south and east, headed for their namesake, where they would fight against three German armies, the 1st, 5th Panzer and 19th. Lorraine, the province

contested between France and Germany ever since the Franco-Prussian War of 1870, was shaped like a spearhead aimed at the heavily fortified underbelly of Hitler’s Reich. The 79th division took Neufchateau, and was the first across the Moselle River, whipping the 15th Panzers. But German resistance stiffened, and the strongpoint of Metz held out against the Americans for two months. General Omar Bradley called the Lorraine campaign “a ghastly war of attrition.” It would eventually cost more than 50,000 3rd Army casualties. Patton’s 3rd Army push through Lorraine had been slowed – and occasionally stalled – by the competing demands for supplies, primarily fuel, occasioned by Sandy Patch’s 7th Army landings on the southern French coast in mid-August, then even more so by Bernard Montgomery’s ill-advised and ultimately unsuccessful Market-Garden campaign in Holland in mid-September.

Meanwhile, my dad, who had come ashore at Arronanches in the British sector of the Normandy invasion beaches, had caught up with his division near Luneville (universally known by American troops as "Looney-Ville"). He was immediately christened "the Perfesser," a nod to his educational achievements, by his new, semi-literate, hillbilly friends in Love Company's 60mm mortar section. Private Dillon's first combat action was in the Forest of Parroy, about 20 miles east of the provincial capital of Nancy. This grinding bloodbath, where the 79th Division fought alongside the American 749th Tank Battalion, has been almost completely overlooked by historians. Here my Dad saw his first dead Germans, some as young as only 14, and still remembers, to this day, his first dead GI. Hitler himself had fought in the Forest of Parroy as a WWI Corporal, and as a point of personal pride demanded that his troops stop the Americans at all costs. Defenders were the 5th Panzer Army, including the 15th Panzer Grenadier Division, 11th Panzer Division, 12th Panzer Division, the 113th Panzer Brigade, and the 19th and 553rd Wehrmacht Infantry Divisions, amongst others. The Germans had numerous defensive trenches, tank-traps, and strongpoints, including an almost continuous line of concrete pillboxes, machine-gun nests, and dug-in tanks. Parts of the forest had been shelled so heavily that they looked like old photographs of no-man's land from WWI. Trees were shattered and unexploded shells still projected from their trunks above head height. As Patch's 7th Army kept pushing north, the 79th Division continued attacking east. On September 29th it was administratively transferred from Patton's 3rd Army to Patch's 7th. After two weeks of heavy combat in the Forest, Dad left the dubious "cover" of the trees and moved into open fields to the east. He had helped his division drive four different German Divisions out of the woods. Some would later reappear during the Battle of the Bulge, attacking a much weaker part of the American front. Many junior officers were lost in the Parroy fighting, including General Patch's son, Captain Alexander M. Patch III, the 315th Regiment's C Company commander, killed on October 22nd.

Many other officers became casualties and they were not always replaced with the best and brightest. By late October, my Dad's new company commander was an inexperienced captain transferred in from a graves registration unit. He inspired little confidence. On October 23, he issued a bonehead order (his last) for Love Company to occupy foxholes and defensive positions just abandoned by the retreating Germans on an exposed ridgeline east of the tiny village of Embermenil. These familiar locations had been pre-registered by enemy artillery, just in case such an error might be made. Private Dillon, outside his foxhole when the German barrage began, was hit by a "daisy cutter" mortar shell, and caught shrapnel in both feet, both ankles, and one knee. Dillon's new company commander took a direct hit on his own foxhole, and, as a macabre form of poetic justice, went back to his old graves registration unit as a KIA. Sandy Patch visited his wounded soldiers, his dead son's comrades, in the front-line hospital that same day. This was the only

time my Dad ever saw a General "up close" during the entire war. One day later, the battered 79th began to be augmented, then relieved, by the 44th Infantry Division. After a short breather, the 79th Division resumed its offensive northeastwards through Lorraine. By December, now supported by General LeClerc's French 2nd Armored Division, it became the first division into Strasbourg and Haguenau, finally within sight of the Rhine and Germany.

Meanwhile, badly wounded Private Dillon was evacuated far to the south, to a hospital in Aix en Provence near where Patch's 7th Army had come ashore just over two months earlier. Another wounded soldier in this same hospital was Tony Hillerman, later the author of the Jim Chee Navajo detective stories. Dad later learned that his older brother Jack, the mustang officer in Patton's 3rd Army, was also WIA just a short distance north of where he had been. And, irony of ironies, both Dillon brothers had been hit not too far from where their own father, the first Dillon mustang officer, had almost died during a 1918 German Mustard Gas attack. Limping back to Love Company after three months of convalescence in late January 1945, Private Dillon now took part in ongoing attacks against the Siegfried Line in the Moder River sector. In February, the exhausted 79th Division was pulled out of Lorraine and sent north to the southernmost tip of Holland, a narrow finger between Belgium and Germany, to rest, refit, and prepare for the Rhine Crossing to come. My father was billeted with a very kind Dutch family in the little town of Brunssum, due west of Cologne, just over the Dutch border from Germany. "Perfesser" Dillon was still tail-end Charlie, the last in line on every march, barely able to walk, much less keep up with his unwounded fellow soldiers. His knee was healing, as was his right foot, but the shattered bones in his left foot had not completely knitted back together yet. The Dutch kids who tagged along behind Love Company called him "Pietert Stuyvesant" after the legendary 17th Century peg-legged Dutch hero whose New Amsterdam later became New York City.

After being in the 1st, 3rd, and 7th U.S. Armies, in Holland the 79th Division now became part of the 9th. It would be one of two divisions that spearheaded the American drive across the Rhine and into the Ruhr. The Ruhr was the industrial heartland of Germany, home to most of its heavy industry and armaments manufacturers. Cities and towns, from west to east, were Duisberg, Dinslaken, Dusseldorf, Essen, Bochum and Dortmund. On March 24, 1945, the 79th crossed the Rhine in attack boats. Private Dillon's new Company Commander, cognizant of his still unhealed shrapnel wounds, ordered him across in an armorer's jeep instead. So Dad went over on the first pontoon bridge across the Rhine in his sector. Three more weeks of constant combat followed, until by the end of April most of the Herrenvolk the Cross of Lorraine troops encountered were protesting that they were "gut chermans, never Nazis." VE-Day found my dad in Bochum (Figure 1) where his company had been mopping up for the previous two weeks.

The formal surrender on May 8th meant little, for not all Germans were yet willing to give up. Particu-

larly troublesome were SS men who had shed their black uniforms and were now masquerading as civilians or regular Wehrmacht troops, and the young, brainwashed, Hitler Youth fanatics. Right up until his suicide, Josef Goebbels had been urging such diehards to become Werewolves, or guerilla assassins, killing unsuspecting Americans when their guard was down, and murdering any Germans willing to surrender to or collaborate with them. On March 30th, 1945, the 3rd Armored Division commander, Major General Maurice Rose, the highest-ranking Jewish officer in the American armed forces, was killed by Panzer troops. Goebbels immediately lied over Nazi radio, boasting that he had been assassinated by Werewolf agents.

In May, after VE-Day, the 79th Division was ordered to Czechoslovakia to relieve Patton's 3rd Army, the war's easternmost American units. Private Dillon took over for his brother, Captain Dillon, who gladly headed west. For the next three months Dad guarded prisoners near Pilsen (Figure 3). The 79th processed, then released, more than 36,000 surrendered German soldiers. More problematic were the more than 94,000 DP's (Displaced Persons), mostly Russian slave laborers, few of whom wanted to return to Russia. Promoted to PFC, Dad pulled occupation duty in Czechoslovakia and then in Germany through the end of 1945. He was finally demobilized, given his "ruptured duck" badge, in early 1946: he had just turned 22. "Perfesser" Dillon went straight back to U.C. Berkeley, to pick up where he had left off three years before.

In WWII the 79th Division never numbered less than 10,000 men, and probably never exceeded 16,000. Yet, total casualties for the Cross of Lorraine Division were 23,457, greatly in excess of 100 percent of full strength at any time during its combat history. 8,582 of these were non-battle casualties, mostly trench foot and frostbite, but 2,476 were KIA, another 467 soldiers later died of their wounds, and an additional 1,699 men were MIA and presumed killed. During its 248 combat days the 79th Division won eight Distinguished Unit Citations. Three of its soldiers earned the Medal of Honor, 904 the Silver Star, and 4,012 the Bronze Star. My father was one of 12,608 79th Division soldiers who earned the Purple Heart Medal.

The old WWII joke that the Germans fought for der Fuhrer, the British fought for King and Country, while the Americans fought for Souvenirs was true,

at least in part, for Private Dillon. During his service in France, Belgium, Holland, Germany and Czechoslovakia, he liberated guns, medals, uniform elements, postcards, photographs, stamps and money from enemy soldiers, abandoned barracks, and bombed-out houses. On one memorable occasion during intense fighting Dad was rooting through the basement of an abandoned building for souvenirs while others in his platoon were blasting away at German troops with their .30 cal. BMG just one floor above. Much later he was called onto the carpet by his C.O., the one and only time he ever

came face-to-face with his Company Commander. A nervous German civilian twisted his hat in his hands as the officer demanded: "Dillon, do you have this man's Undertaker's License?" my father, of course, being the only logical suspect. Most captured rifles were broken against fence-posts, and "junk" pistols, small-caliber police guns, were dumped in latrines. But Dad mailed home, courtesy of the free U.S. Army postal service, both German and Polish 8mm Mauser rifles, percussion fowling pieces and pistols, a Hitler Youth pellet rifle, SS and SA "short sword" daggers, Hitler Youth knives, German helmets, medals, and thousands of documents, photos, and stamps. He also tried to send a postcard or a letter home to his widowed mother every day he was overseas, to let her know he was still alive. These postcards were invariably captured German items, most with Nazi themes (Figure 2). The family still retains every one of them.

Private Richard H. Dillon personally hammered one small nail in the coffin of the Thousand Year Reich. The Nazi trophies he liberated in 1944-

1945 are reminders that long ago and far away he was a combat soldier who fought for the freedoms that all Americans enjoy today. In my hometown there is a clock tower at the high school every member of my family has attended for almost a century. Near its base is a small bronze plaque, now green with age, bearing the names of the many young men, all Tamalpais High School graduates, who were killed in World War II. My father's name is not on that plaque, but those of all his closest friends are. In April of 1945, as the war was drawing to an end, in an abandoned Wehrmacht barracks, Private Dillon finally found his Luger. He, his brother, and all of those friends whose names are on that clock tower, had already paid for it, long before.

Figure 3: After depositing many other less-desirable captured pistols in latrines across France, Holland, and Germany, 21-year-old 79th Infantry Division Private Richard H. Dillon finally got the Luger he had been looking for. Here, in Czechoslovakia, near Pilsen in June 1945, a month after VE-Day, he fires it in the approved single-handed position. Photo by unremembered Love Company GI.

Cavalry Arms Medical Trauma Kits

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics. The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll. The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.
