Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!

Fills the primer tube while you reload!

Clear polycarbonate shield and protective housing

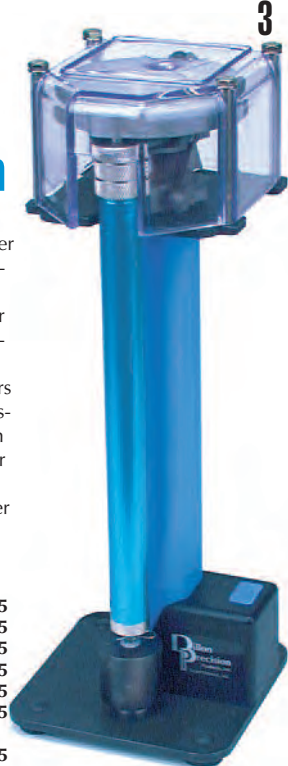

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$47.95 each.

We READ Our Mail!

I enjoyed the August issue of *The Blue Press* as usual, they are always filled with informative and well done articles in addition to all of the catalog information. In the August issue I particularly enjoyed John Marshall's piece on the MAC-10 family of firearms. While serving in the U.S. Marshals Service we had a number of them in 9mm and .45 A.C.P. issued to the Special Operations Group (SOG) and certain divisions as well as for special assignments. I had a fair amount of trigger time on the .45 A.C.P. version and found it a capable weapon and useful for both close-in personal protection and for breaking an ambush. I also carried a MAC-11 in .380 caliber while assigned to a dangerous motorcycle gang task force. I carried it in a spring-loaded open-top valise while transporting gang members to and from court. Thanks for the memories.

Budd Johnson (Uncle Budd)

Inspector, U.S. Marshals Service - Retired

We the customers read the mail, too. In the July issue one of the writers commented on the matter of getting people to vote. I agree, it's a challenge. For my college classes, I kept a small stack of registration forms. At the appropriate times I would encourage (nag) my students to register if they were eligible. I used the approach that if you vote, you've earned the right to complain if the election results didn't work out your way, or to brag if they did. I cited myself (I haven't missed since 1945) and stated that having voted, I have the full right to express my feelings. That could work whether my choice won or lost. If you don't vote, then you have no right to say anything. So, if someone complains about election results, ask if they voted.

Robert Munsey - Winnetka, CA

Hello, I am a 26-year-old female who receives your catalog in the mail. I would like to comment on the over sexualization of the females holding guns on each issue. As a female gun owner, who also shops for accessories for her firearms, it slightly offends me to always see a female wearing tight clothing, holding a gun trying to sell me something. I understand these women are not the worst that I have seen in advertising, so I applaud your company for that, but why not have a cute-looking guy holding a handgun, chest bulging through his tight shirt, ass sticking out, trying to sell me more ammo? Granted, I understand most of your customers are males, and you have to cater to the majority. But c'mon, throw your female customers a bone!

Rebecca - eeyore_chik@hotmail.com

Over sexualization? Us? Hmm.

The New Dillon Range Bag, Redux

By Larry Drake

Back in the late 90s when I first started shooting competitively, a friend told me to make sure I had a good bag to carry all my stuff around the range. I did what everyone probably does and used an old backpack. This bag had been used to lug books around campus when I was in college and it had certainly proven tough enough for that task. It was sturdy, reasonably compact, and it held all of my gear. Unfortunately, it was also just a big sack with shoulder straps. I spent a lot of time digging around inside of it looking for one piece of equipment or another and banging everything up in the process. My friend kind of laughed and said, "Don't worry, all this hobby gear is going to make you into a bag collector." That was an understatement.

So now I have a closet full of bags in my spare bedroom. Bags for rifles, shotguns, pistols, and some that hold all three. The old college backpack is in there too, but it only serves to hold random 3-gun gear that may or may not be needed during a match. The first pistol bag I bought to replace that backpack is still in there too, and even though it's pretty beat up it still holds up thanks to some much-needed stitching repairs. This bag, from Galati, saw me through lots of

matches and then got passed along to my daughter, who abused it in ways that even I hadn't considered. It's still doing pretty well considering the life it's had. Most of my pistol bags are from another source though – Dillon Precision. Go to any USPSA or IDPA match and you're sure to see a ton of Dillon bags on the range. Even a casual glance down the line at a public shooting range will confirm the popularity of these bags. Over the years, the Dillon bags have evolved in response to shooters needs and to resolve some issues that have popped up along the way.

Dillon bags have always been known for quality materials and construction. Sturdy zippers and strong stitch work in all of the seams help ensure that your gear is going to be protected while you are out on the range and that the bag will last. The latest incarnation of these bags doesn't change that. The new bags are improved in their versatility and ease of use. Unzip the lid and you'll find two zippered mesh compartments that are ideal for storing eye and ear protection. The main compartment is divided by adjustable Velcro panels into three sections with a set of zippered pouches in the back. There's a large section, which is perfect for a pistol pouch (or two) and a magazine pouch. It's also deep enough that mag brushes and clean-

Clockwise from left: There are two bottle holders in front and a zippered compartment with multiple accessory pockets. The carry handle is generously padded and the shoulder strap has a removable shoulder pad. The interior compartment is equipped with removable dividers and multiple pockets. Each end of the bag has a zippered pouch, and there's a large, divided pouch on the back.

ing rods fit in the bottom. The forward section is equally as large, but divided into two compartments which are conveniently sized to accept Dillon's ammo or utility boxes with some room to spare. On the exterior, two large side compartments provide storage for items like brass bags or a first aid kit. The back of the bag features a zippered flat compartment that is divided by a Velcro strip so you can use it for one large item, or as two storage areas for smaller items. The front has two water bottle holders, with small pouches at the base that seem perfect for spare ear plugs, and a central storage area for pens, match books, score sheets and even a pouch suitable for batteries or other small items. All of this is rounded off by carry straps with Velcro closures that form a handle and a separate shoulder strap. The strap slips through a couple of D-rings that are built into the body of the bag and then threads through rectangular clips to lock. This eliminates issues with the traditional clips that always seemed to bind or – worse yet – break. Think of it as functioning just like the sling on your rifle. The strap comes with a reversible shoulder pad that is textured for a good grip on one side and smooth on the other.

In my opinion, the area of greatest improvement is in the shape of the bag. It is taller than it is wide and that helps a lot. The old Dillon bag wasn't bad in this regard but the M.O.L.L.E. version was just too wide and when you put it on your shoulder, it wanted to flip over. Thankfully, it was full of compartments to keep all of your gear secure if this happened, but it was still a less-than-ideal situation. You could rectify this issue by removing the side compartments, but that greatly cut down on the utility of the bag. Now, with the new bag, I don't have that problem at all. It's shaped to stay upright and still has plenty of storage options. It even has nice thick feet to

help protect the bottom of the bag.

If you plan to travel by air to matches, the bag has locking zippers that will work with the same Master locks Dillon sells for their machine covers. These little locks are TSA approved and while they won't keep the truly determined out – this is a soft bag after all – they will keep the nosy and less-motivated away from your gear. I have often used the older Dillon bags as "carry on" luggage and this one should fill that role very well. [*Editor's Note: Just make sure you've removed ALL your shooting gear – including spent cartridge cases – before you use it for this purpose! The TSA has NO sense of humor about such things.*]

So far, I have taken the new Dillon range bag out to a couple of local steel matches and a weekend I.C.O.R.E. match all with great results (well, for the bag anyway – I still need to speed up). For those of you who may not be familiar, I.C.O.R.E. is the International Confederation of Revolver Enthusiasts (www.icore.org). The format is part USPSA, part Steel Challenge and part Bianchi Cup. To me the I.C.O.R.E. match was the big test. Revolvers are really fun to shoot and I.C.O.R.E. is a great shooting sport; but there's a LOT of gear required to keep that "revo" spinning during the stage.

Between stages, I need a bag that's going to make my life easier. Quick access to my gear is essential to getting my moon clips refiled, when needed, and my revolver cleaned up so I can get to the next stage. After adjusting the dividers in the main compartment, I had plenty of room for boxes that held loaded moon clips, extra ammo, my cleaning rods, mooning and demooning tools, and a baggie to fill with empty cases.

The new Dillon Range Bag is part number **K46-19366** and it retails for **\$89.95**. That's a pretty good deal, considering the value of all the gear it's hauling around for me.

Dillon Range Bag

Dillon's New Range Bag is designed to hold the Stage Bag (inset, top left) or a Border Shift Ammo Bag (sold separately below), as well as a Dillon Large Utility Box (see Page 36). The Main Compartment is 12.5" long x 7" wide x 10" high, the End Pockets are 8.5" tall x 6.5" wide x 2" deep and the Front Pocket is 9" tall x 6" wide x 2" deep.

BL 550 Dillon's Basic Loader

\$259⁹⁵

K46-15399

Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount K46-22051 \$47.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550Bs

AUTO PRIME SYSTEM

RL 550B ACCESSORIES

A. RL 550B CALIBER CONVERSION KITS

Contains: Shellplate, powder funnel and locator buttons. Available in all calibers; please specify caliber desired.

K46-RL550B CON-

VERSION \$45.95 (Exotic calibers, \$55.95)

B. AUTO POWDER MEASURE SYSTEMS

Additional powder measures stay on the toolhead. Never change powder measurements again!

RL 550 Powder Measure **K46-20782, \$76.95 ea.**
Magnum Rifle Powder Bar **K46-21353, \$29.95 each**
X-Small Powder Bar **K46-20780, \$29.95 each**

C. DELUXE QUICK CHANGE ASSEMBLY

With a quick change assembly and a caliber conversion kit (SOLD SEPARATELY), you can convert in less than a minute. Complete with:

- Toolhead
- Powder Measure
- Powder Die
- Toolhead Stand

Price without Dies, **K46-22058, \$103.95**

Loading dies sold separately on Pages 34, 35 & 52.

D. POWDER DIES

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "bellling" adjustment.

K46-20064, \$11.35 each
Three or more, \$10.25 ea.

X-Large Powder Die, **K46-21253, \$19.95 each**

E. TOOLHEADS

Don't adjust dies when switching calibers. These precision tool holders hold your dies in perfect alignment, making caliber changes quick and easy.

K46-13909, \$22.95 each
Three or more, \$20.95 ea.

F. TOOLHEAD STANDS

The ultimate in convenience for keeping your reloading bench clean and uncluttered.

K46-22055, \$20.95 each
Three or more, \$18.95 ea.

G. 1" BENCH WRENCH

K46-10842, \$7.95 each
Two or more, \$7.10 ea.

Dillon's Rapid Trim 1200B Case Trimmer

Makes short work out of trimming large quantities of rifle brass

Dillon's RT 1200B shown installed on an AT 500.

The RT 1200B is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, a 1/4 horsepower electric motor driving a carbide cutter is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1200B is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1200B trimmer motor **K46-22080** is **\$254.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately. (Please see chart below.) Replacement carbide cutting blades, **K46-13141**, are **\$19.95** each. Upper lock rings, **K46-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes complete with large and small swage rods.

K46-20095

Dillon's Case Preparation Equipment

CV-2001
K46-20493
\$187.95

CV-750 K46-19455 \$144.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator K46-20675 \$72.95

CM-500 Case/Media Separator K46-21045 \$46.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 K46-22047 \$212.95

Euro CV-750 K46-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **K46-13804** **\$8.95**
Case (20 pc.) **K46-20255** **135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **K46-13733** **\$8.95**
Case (20 pc.) **K46-20256** **135.95**

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) **K46-21375** **\$135.95**

Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.
15-pound bag **K46-13287** **\$23.95**

Ground corn cob polishing media – the best there is for that final polish.
10-pound bag **K46-13496** **\$15.95**

JANUARY 15, 1865: THE

By Brian Dervin Dillon, Ph.D.

Most people who shoot pistols, be they military, police, or civilian, tend to practice at close range. Police training, for example, is typically conducted at only seven or no more than 15 yards, and few modern pistol shooters try their hand at greater distances, at 25, 50, or 100 yards. The most challenging pistol shooting, with the fewest proficient practitioners, involves hitting a human target at ANY distance while it is shooting back at you. And, within this rarified category is an infinitesimally smaller percentage, that of pistol shooters hitting their targets after having been shot themselves. Robley Dungleison ("Fightin' Bob") Evans, a teenaged pistolero, did just that, on January 15, 1865. Evans made what may have been the single most incredible pistol shot in American military history, killing a sharpshooter with a single pistol bullet after that man had hit him four times with a rifle.

When Teddy Roosevelt was president, Fightin' Bob Evans was America's most famous and best-loved Navy man. A hero of the Naval Battle of Santiago, Cuba, in 1898 he had helped destroy the Spanish Atlantic Fleet. But Evans had as ferocious a reputation on dry land as he did atop the waves. He had been an adolescent Indian-fighter and badly wounded Civil War hero. He was the only U.S. Naval officer invalidated out of the service for

supposedly incurable wounds subsequently reinstated. Evans was the only Admiral afloat in any of the world's navies

who had killed buffalo from horseback, been shot through and through by an Indian arrow, and ridden a Pony Express horse through Brigham Young's flowerbed. Evans was so tough he made the quasi-mythical contemporaries of his youth, such as Billy the Kid, look like namby-pambys.

Born into an upper-crust, slave-owning, Virginia family, Evans' dream was to attend the U.S. Naval Academy at Annapolis. But all spaces were filled, except for the very first one reserved for the Utah Territory, and its candidate had to be a resident. So, in 1859, 13-year old Robley D. Evans became the

18-year old U.S. Navy Ensign Robley D. Evans recuperating from the four gunshot wounds he received while leading his assault team on Fort Fisher, North Carolina on January 15, 1865. Photo from Evans, "A Sailor's Log," 1901.

youngest member of a five-man, one boy, wagon train, headed for Salt Lake City. Evans' party crossed the Great Plains, hunting buffalo and antelope as they went. He learned to ride up alongside buffalo bulls at a gallop, killing them with diagonal heart-lung shots from a Colt's repeating rifle. Small for his age, his preferred sidearm was the model 1851 Colt Navy .36 caliber revolver, small, light, and handy.

Two days northwest of Fort Laramie, the party was surrounded by hostile Indians, and greatly outnumbered. Now began Evans' first gun battle.

The whites made a fighting retreat back to Fort Laramie, abandoning their wagons and shooting from the saddle. Some of the attackers were left dead on the prairie and Evans, still only 13, cut his first notches that day. Later, trying a different route, the group was attacked again. A different Indian group ambushed the travelers, peppering them with arrows. Young Evans cut more notches on his gun, but not before being shot with an Indian arrow. The stone arrowhead passed through his left ankle, his stirrup, and into a rib of his big Mexican mule. His mount had three other arrows sticking in him, but survived the attack.

After many adventures out West, Evans returned to the East Coast and entered the Naval Academy. In the Spring of 1861, with the

outbreak of the Civil War, almost half of his class resigned and headed south to join the Confederate Navy.

But Evans stayed with the Union. He was promoted to Acting Ensign on October 1, 1863, when barely 17 years of age, and detailed to the sailing steamer USS Powhatan, pulling blockade duty until January 1865.

By the fourth year of the Civil War, Fort Fisher, North Carolina, was the final nut to crack on the 3,500 mile-long Rebel coastline. It was also the toughest. Fort Fisher was one of the last two southern strongholds, the other being Petersburg, Virginia, guarding the southern approaches to the Rebel capital at Richmond. Called the "Southern

BEST-EVER PISTOL SHOT?

Gibraltar," Fort Fisher was thought to be impregnable. It was the best-designed, best-armed, and strongest fortified position within the entire Confederacy. In front of its battlements and cannon were a tall wooden palisade and a primitive mine or "torpedo" field. The January 15, 1865, attack on Fort Fisher was the last amphibious battle of the war and would remain the largest and most complicated amphibious assault until World War II. After a monumental Naval bombardment, a coordinated attack was planned with sailors and Marines in a diversionary assault on the left to draw the Rebels away from the main U.S. Army attack on the right.

18-year-old Ensign Evans assembled a 62-man assault team, all Powhatan volunteers, as part of the Naval force of more than 2,000 men. The sailors were armed only with pistols and cutlasses, in anticipation of hand-to-hand fighting once inside the fort. All the pistols were .36 caliber "Navy" guns, some of the sailors carried Colts, others the stronger Eli Whitney design. During the American Civil War, two different caliber revolvers were used by Northern combatants, depending upon whether they were in the Army or Navy. Both were cap-and-ball six-shooters, and most were made by Colt, but many thousands were made by other firms such as Eli Whitney Arms. The "Army" revolver carried in the Fort Fisher attack was a .44 caliber, large-bore weapon, whereas the "Navy" revolver was a much smaller .36 caliber pistol.

The two different calibers were authorized because of two different perceived functions. Why did the Army issue a large caliber pistol, while the Navy considered a much smaller caliber adequate? The direct ancestor of the Army .44 was the old, single-shot, smoothbore "horse pistol" of pre-revolver days. These guns were the secondary side arm of the cavalry, whose primary weapon was the saber. The horse pistols were carried, often in pairs, not in belt holsters, but in saddle holsters on either side of and within easy reach of the rider. The function of the big-bore "horse pistol," from the 1750's onwards through the time of the Mexican War of 1846-48, was not so much to kill the enemy cavalryman, but his horse, while keeping out of the reach of the other rider's saber. Once dismounted, the enemy could then be dispatched with a saber stroke or simply ridden down and trampled. In North American military applications then, the big-bore Army pistol was initially intended for use in killing horses, not men. Because there were no horses afloat, the revolvers carried by naval officers were of smaller caliber, intended for use only against human beings. Rightly or wrongly, a large, heavy bullet was not considered necessary. The Army .44 was the direct ancestor of all the large-bore post-Civil War cartridge revolvers such as the Colt .45 Peacemaker, which became the new Cavalry sidearm, the top-break Smith and Wesson .44 American and Russian models, and, ultimately, John Browning's 1911 .45 Auto Colt Pistol. This last

handgun was the final one issued to U.S. Cavalrymen at the twilight of their existence. The Civil War Navy .36, regardless of whether it was made by Colt, Eli Whitney or any other manufacturer, was ancestral to the familiar smaller-bore service revolver rounds such as the anemic and worthless .38 Smith and Wesson of 1869, the much improved .38 Special of 1902, and the superlative .357 Magnum of 1935.

Returning to January 1865, the night before the attack on Fort Fisher, rifle pits had been dug for the Marines. They were supposed to go to ground, providing covering fire for the sailors as they charged through them towards the Rebel stronghold. Unfortunately, like many complicated plans, the Federal attack did not go as intended. Ever afterwards, surviving sailors complained that the Army attacked too late, while the soldiers protested that the Navy "jumped the gun" and went in too early, long before the infantry was ready to support them. The naval force slogged through the sand more than 1,200 yards over the exposed beach, suffering casualties from very accurate rifle fire long before the fort's defenders came within range of their pistols. Then the Rebels brought up canister-loaded cannon, with even more deadly effect.

From more than 100 yards away, Ensign Evans saw Colonel Lamb, the Confederate second-in-command, atop the battlements, and carefully aimed his .36 Navy at him. Just as Evans fired, a Rebel sniper shot him sideways through the chest, spinning him around with a "burning sensation like a hot iron," and causing him to miss his first pistol shot of the day. Evans disregarded the painful wound, and continued on towards a gap blasted in the wooden palisade by the naval bombardment. The young Ensign now realized that one particular Confederate marksman had identified him as an officer, and was shooting repeatedly at him. At just under 100 yards distance the Rebel hit Evans a second time, in the lower left leg with a .52 Caliber Minié bullet, flipping him facedown in the sand. Although his leg now felt "asleep" Evans kept on hobbling forward. By this time the Naval Brigade had been cut to pieces, the beach bathed in blood, and hundreds of dead and wounded littered the sand. Only a few continued the attack. Of the 62 men Evans began his charge with, 54 had been killed or wounded.

Finally through the "torpedo field," Evans was one of only eight men out of the more than 2,000 of the Naval Brigade who successfully penetrated the wooden palisade before the fort's ramparts. All eight men inside palisade had been shot, and any not yet dead were now in what amounted to a known-distance (35 yard) shooting gallery. Rebel marksmen calmly fired and reloaded their single-shot rifles, occasionally handed others loaded by their companions. Inside the palisade, Evan's Rebel "sharpshooter friend" shot him a third time, through

Dillon Leather b

When we lost our supplier for Dillon Leather, we considered abandoning the gunleather business. Fortunately, we were able to team up with Mitch Rosen Extraordinary Gunleather to continue to offer a best-quality, made-in-the-USA line of belts and holsters. We know you'll like these products — we're happy to have our name on them.

Stylemaster-DL \$150

A superior shoulder rig made of best-quality leather with solid brass fittings — no cheap plastic, no soft suede or other low-quality leather.

The Safepacker

THE WILDERNESS' SAFEPACKER™ HOLSTER is the ONLY mode of concealed carry that I have personally witnessed save a man's life. It's a long story, but suffice it to say that the element of surprise afforded by the Safepacker did the trick. The folks at The Wilderness contend that the Safepacker™ is the best, most versatile and utilitarian holster in the world. I tend to agree, because the one you see pictured at left...is mine.

Mark Pixler, editor

The Safepacker can be hand carried like a day planner, equipped with a shoulder strap (not included), slipped into an attaché case, opened with the top flap stuffed between the mattress and box springs on your bed, strapped to a seatbelt, attached to a sun visor, clipped to a backpack, or worn on your hip as a very low-profile "un-holster."

- "Government Model" Safepacker, RH **K46-11703 \$89.95**
"Government Model" Fits: Colt Government Model, GLOCK 17/18/20/21/22, SIG P-220/226, Beretta 92/96, HK USP-45, 4" K-Frame, 3" N-Frame, etc.
- "Commander" Safepacker, RH **K46-11702 89.95**
"Commander" Fits: Colt Commander, SIG P-245/229, HK USP-45 Compact, Tokarev, etc.
- "Officers" Model" Safepacker, RH **K46-11701 89.95**

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original.

We're selling the five-stitch version, which has extra stitch lines to make the belt more rigid vertically in

order to better support holsters, magazine pouches and other gear. This belt is a favorite with law enforcement, military personnel, firefighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

Uncle Mike's Kydex Holsters

Michaels of Oregon's injection-molded Kydex holsters have a level of detailing, quality and affordability unmatched by other manufacturing methods. The almost-vertical rake allows for behind-the-hip carry, and for some applications, the holster can function as a crossdraw. Smaller-size holsters can also be used for "appendix" carry. To aid concealment and to assist in the draw, the holster rides close to the body at a mid-level height. The injection-molded belt loop is designed to accept and support a variety of belts from 1" to 1.75" wide.

**Holster NOT
Included**

The key to the successful gunfighters of the Old West was not so much the weapon of choice, but rather the holster. How quickly the weapon could be retrieved, aimed and fired was the difference between survival and becoming a statistic. The Close & Ready Holster Caddy provides a faster and safer way to protect your family. It works with most existing holsters and slides easily between the mattress and box springs on either side of your bed.

"Wild Bunch" 1911 Holster & Mag Pouch

This holster/mag pouch was designed in a joint effort by World Cowboy Action Shooting Champion Gene "Evil Roy" Pearcey and World Fast Draw Champion Bob Mernickle when SASS introduced the "Wild Bunch" category for Cowboy Action Shooting.

When these two champions put their heads together, they created a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame

away from your body so you'll get a full combat grip, and the holster includes the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

'Belted Magnum' Powder System

Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. Our "Belted Magnum" Powder System features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder.

Like all of Dillon's powder measures, the Belted Magnum Powder System is case-activated and can be used with your RL 550B, XL 650 or AT 500 reloader. It's ideal for loading large-caliber magnum rifle cartridges. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

The "Belted Magnum" Powder System is based on our SL 900 Shot Dispenser, so the Maximum Charge Bar won't work in our standard powder measures – you'll need to buy the entire system. The good news is that the "Belted Magnum" Powder System has an integral drain, so it's easy to empty the hopper in order to change powder types; so, if you load several big calibers with various powders, it's easy to switch from one to another.

Keep plenty of extra powder on hand, because when you're dispensing 100-plus grains into every cartridge, you'll need it!

Magnum Powder System **K46-97126 \$137.95**

Forster Products Datum Dial Ammunition Measurement System

Forster Products' easy to use Ammo Measurement System gives you the data you need to refine your case-sizing and bullet-seating operations. For example, using the average relative measurement taken from several cases that have been fire-formed from the same firearm, you can then adjust your sizing die to produce cartridges with a headspace tailored to your firearm's chamber. This complete kit includes one Datum Dial tool for checking cartridge cases, both bullet/cartridge dials for use with .17, .204, .224, .243, .257, .264, .277, .284, .308, and .338 caliber bullets, a laminated chart showing common datum diameters, complete instructions and storage box. (A caliper is required.)

Attain Peak Accuracy With Hornady's L-N-L O.A.L. Gauge, Bullet Comparator

Overall Length Gauge

The initial distance a bullet must travel when fired (from the cartridge case mouth until it engages the rifling) is absolutely critical to achieving peak accuracy. A free run of .010 to .060 is commonly employed for accurate target, varmint and hunting loads. Consequently, knowing and being able to alter the dimensions, as needed, is vitally important to precision shooters and handloaders.

OAL Gauge **K46-14622 \$38.95**

Bullet Comparator

Correct bullet seating depth is critical to accuracy. In addition, minor variations in bullet seating depth will have an effect on both pressure and velocity. The L-N-L Bullet Comparator provides precision handloading dimensions.

I Am Soldier of Fortune: Dancing with Devils ³³

By Lt. Col. Robert K. Brown, USAR, (Ret.) with Vann Spencer

Reviewed by Mark Pixler

I saw my first copy of *Soldier of Fortune* Magazine after I had graduated from USCG Hospital Corps School in 1978 and reported aboard the USCGC Boutwell (WHEC-719) in Seattle, Washington. It was on the rack in one of the many underground bookstores I frequented downtown, and the title and cover photo caught my eye immediately. It reminded me of the “men’s magazines” with titles like *Argosy*, *Real* and *True* that I used to read surreptitiously at the drugstore newsstand when I was a kid.

As one might infer from the title, *I Am Soldier of Fortune* is Lt. Col. Robert K. Brown’s memoir, a chronicle of how he came to be editor and publisher of *Soldier of Fortune*. It’s a story about how a young man’s desire to “become a top-gun pilot, a hard-charging marine, a special agent or...” led to a publishing career and a lifelong fight against tyranny in all of its forms. Brown’s book starts with Castro’s overthrow of Batista in Cuba and reads from there like a history of U.S. involvement (or lack thereof) in the brushfire wars and revolutions of the second half of the 20th Century.

As everyone who’s ever been in the service knows, the difference between a fairy tale and a “sea story” (it’s “war story” for non-seagoing services) is that a fairy tale starts with “Once upon a time...” and a sea story starts with “Now, this ain’t no s#!+...” Unlike either, *I Am Soldier of Fortune* reads like an adventure story written in journalistic style. Trained as a journalist, I looked at it as a history lesson about the evolution of participatory journalism.

I believe the single most impressive mission *Soldier of Fortune* embarked upon was the search for hardcore proof that there were American POW/MIAs in Communist Laos years after the end of the Vietnam War. Brown devotes a significant amount of space in the book to his magazine’s effort to find such proof, including his financing of a secret base camp called “Liberty City” (FOB ‘81) in Laos. This effort morphed into a search for a sample of the chemical warfare agent “Yellow Rain” and a detour into supporting a Laotian revolution!

There are also chapters outlining SOF’s coverage of the “Bush War” in Rhodesia (now Zimbabwe), the Soviet war in Afghanistan (where they scooped the intelligence agencies of the Western World, bringing back the first examples of the then-new Soviet AK-74 and its 5.45 x 39mm ammunition), war in Lebanon, the US invasion of Grenada, the insurgency in El Salvador, Desert Storm, and the Balkans. In most of these cases, SOF has provided support in the form of training and materiel to combatants

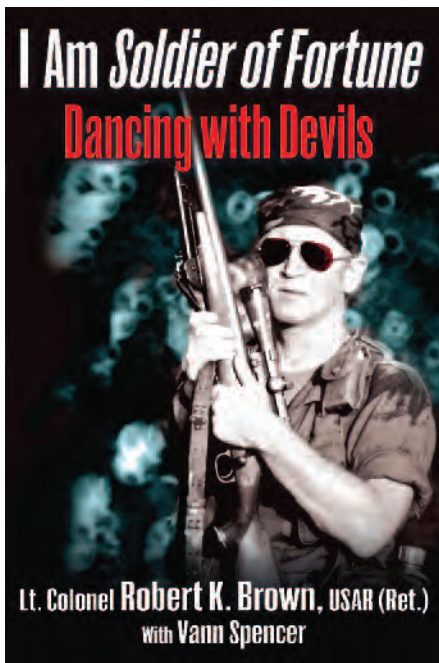

fighting against the forces of tyranny or terror. *Soldier of Fortune*’s efforts have not been without human cost as well: four SOF correspondents were KIA in Burma, Angola, Nicaragua and Sierra Leone, and more recently a freelancer was killed in Syria.

Lt. Col. Robert K. Brown is an unapologetic anti-Communist and die-hard champion of The Bill of Rights, with whom I have worked extensively in campaigns to elect pro-freedom politicians over my years at Dillon Precision. It took me several years of knowing him before I could get used to calling him “Bob” as he always requested. Because of my time as an enlisted man, “Colonel” just nat-

urally rolled off my tongue whenever I talked with him on the phone.

I only recently told Bob that he is probably the person most directly responsible for my career here at Dillon. Lo...all those many years ago, when I was a Coast Guard petty officer reading *Soldier of Fortune* magazine in my sickbay, I’d determined that someday I’d become a journalist and write for *Soldier of Fortune*. Well, that never happened, but I did go to J-school, wrote about Apache attack helicopters, and – through some miracle of serendipity – landed here at Dillon. Subsequently, I came to know Bob for the patriot he is, and to me, reading his book was like listening to war stories told by a good friend, and I know “this ain’t no s#!+.”

To get your own copy of Bob’s book, go to *Soldier of Fortune*’s website at www.sofmag.com or call 1-800-999-9718.

Dillon's Pistol Die Sets

Size Die

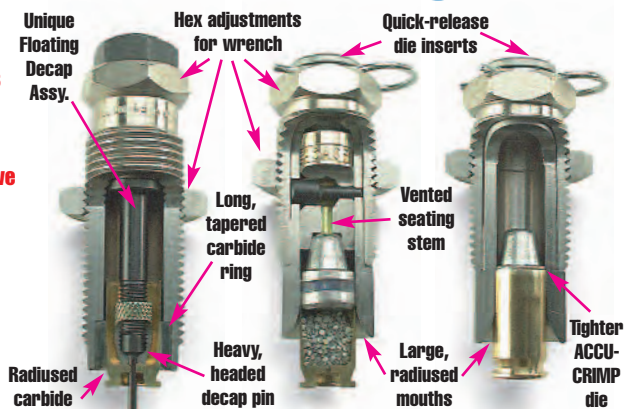

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

Dillon's Rifle Die Sets

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Extra Loading Data Labels, K46-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

California Competition Works

12 Gauge Shotshell Tactical Strippers

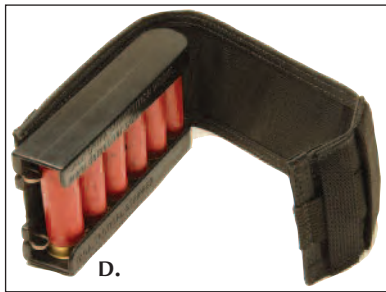

A.

B.

C.

D.

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device

(C. & D.) that will accommodate up to a 2-1/4" duty belt.

A. Six-Shell Tactical Stripper **K46-18606 \$23.95**

B. Four-Shell Tactical Stripper **K46-18605 22.95**

C. Three-Shell Aluminum Stripper* **K46-19475 34.95**

D. Six-Shell Covered Tactical Stripper **K46-19225 33.95**

*Three-Shell Aluminum Stripper accommodates 2-3/4" shells only.

AP Custom USA Shotshell Carriers

AP Custom USA's Shotshell Carriers are 100-percent machined from solid billet aluminum, and utilize proven 303 Hi-Yield Stainless steel leaf springs to contain either three or four 2-3/4" 12 Gauge shells in their slots, depending on model. Both models offered here feature the BLADETECH Tek-Lok™ Universal Belt Clip. The 4x4 Shotshell Carrier holds four 2-3/4" 12 Ga. shells in two adjacent slots. The 4x4 is designed for loading four shells at once, either strong or weak-handed. The 3x3 holds three 2-3/4" 12 Ga. shells in two adjacent slots.

TACCOM, LLC Tactical and Competition Accessories

QUICK CADDY...
light, easy, simple!
Made from Delrin, TACCOM's Quick Caddy holds the shot shell by the rim only, allowing for easy access to the shells for simple and fast removal. Holds four 12 gauge shells, any length! Comes with a belt strap to attach to your belt, but allows you to use the Tek-Lok™ or ELS systems and is adaptable to MOLLE system as well.

K46-19537 \$24.95

TACCOM, LLC's Dualload Shot Shell Holder is available in 2-, 4-, or 6-Shell versions and can be customized to carry your shotgun ammo in several configurations. We're offering the 2Up version that can be either attached to a belt or MOLLE gear, as well as the 4Up and 6Up versions with a BLADETECH Tek-Lok™ Universal Belt Clip (included) that can be attached at various angles. The Dualload allows you to grab two shotshells aligned in such a manner that it makes it easy to load two at a time into your shotgun. It's quick, easy and (most important) intuitive!

By John Marshall

Over six million of these handy, lightweight carbines were produced during the World War II period, making it one of the most prolific weapons of the war. It wasn't an assault weapon as we have come to know it today, and it wasn't a submachine gun either. It fired what was essentially a powerful .30-caliber handgun cartridge. The carbine was a semiautomatic at first, and in a later version, fired both semi and full auto. Originally designed to replace the 1911 and 1911A1 .45 caliber pistols for rear-echelon troops, it mostly failed in that objective. Instead, it was issued at almost every level and in every theater of the war, while the .45 pistols continued to be fielded. In a folding-stock version, it served our airborne troops as a primary weapon throughout their distinguished record during WWII. It zoomed from concept to production in about a year, and was produced as a masterpiece of production control and sub-contracting by a large number of different prime manufacturers. Immensely popular with the troops, it was used throughout WWII, Korea, and Vietnam. There was nothing else like it.

In June of 1940, the U.S. Army Chief of Infantry requested the design and production of a light rifle from the Army Ordnance Department. The .45 semi-automatic pistols were great for close-range defense, but at longer ranges were ineffective. A short, handy shoulder arm could give those currently armed with the .45 a more potent weapon. Paratroopers, who of necessity had to travel light, could also benefit from a carbine, which would be better suited to offensive use. Interestingly, a carbine (short rifle) had not been general issue since the Krag-Jorgensen carbines used by cavalry troopers at the turn of the 20th Century. The Ordnance Department issued a call to various firearm manufacturers to develop samples. It wanted a weapon weighing about five pounds. It had to be effective out to 300 yards. It was to be carried by a sling or some comparable device. It would be chambered for a .30-caliber round similar to the commercial Winchester .32 self-loading cartridge. After preliminary tests, final service tests of qualified entries were held beginning September 15, 1941.

A possibility fielded by Winchester had drawn good reviews in previous tests. Winchester's entry was put together in record time. It utilized a smaller version of the basic M1 Garand action, but it was actuated somewhat differently. Gas was bled from midway in the barrel to power a short-stroke piston. The piston impacted on a somewhat heavy slide attached to an operating arm incorporating a cam. The cam rotated and unlocked the bolt after the bullet had left the barrel. David Marshall Williams, a former convict who worked with engineering manager Edwin Pugsley and the rest of the Winchester design staff, had invented this new and efficient method. He was known as "Carbine" Williams from that time on. He achieved some notoriety after a movie loosely based on his life and starring Jimmy Stewart was made.

The Winchester entry was selected as the best of all candidates entered in the trials, and on October 22, 1941 Winchester was notified that their weapon was to become the U.S. Carbine, caliber .30 M1. The new carbine had an overall length of 35.6 inches, and weighed 5.5 pounds with an empty 15-round magazine. An L-shaped "flip-flop" rear sight was incorporated, calibrated for 100 and 300 yards. No provision was made to mount a bayonet. The .30 Carbine cartridge had a muzzle velocity of about 2,000 feet per second from an 18-inch barrel, with an effective range of 300 yards. All issue M1 Carbine ammo utilized ball powder and non-corrosive primers. Some minor tweaking to the design was effected, and then the real work of producing the new weapon on a wide scale began.

A carbine production board was instituted to distribute blueprints and coordinate production. Ten prime manufacturers produced the weapon in varying numbers. They were: Inland Manufacturing Division of General Motors, 2,625,000; Winchester, 828,059; Underwood-Elliott-Fisher, 45,616; Underwood also made a huge number of barrels that were provided to other manufacturers; Rock-Ola Jukebox Company, 228,500; Irwin-Pedersen, 3000 (none delivered); Saginaw Steering Gear Division of GM, 293,592 (after taking over the Irwin-Pedersen contract); Quality Hardware, 359,666; Standard Products, 247,160; IBM, 346,500; and National Postal Meter, 413,017, NPM later changed its name and

The U.S. M1 Carbine

“It wasn’t an assault weapon as we have come to know it today, and it wasn’t a submachine gun either.”

produced and marked 239 carbines under the name Commercial Controls. It should be noted that most M1 carbines found today will have been arsenal reconditioned and equipped with later-design parts. These included a fully adjustable rear sight, a modified rotary safety (early push-type safeties were sometimes mistaken for the magazine release, causing an “oops”), a forward band incorporating a bayonet lug, a round-cross-section bolt and an improved magazine catch.

The carbine illustrated is an ultra-rare Standard Products weapon in as-issued original WWII configuration. Although most of the smaller parts on the M1 carbine were routinely subcontracted out to about 140 other firms and stamped with their markings, the parts on this specimen nearly all match as being made by Standard Products, including the magazine. Most of the work force at Standard Products plant in Port Clinton, Ohio, was female. Most of the men in that city had gone to war, and many of them perished during the Bataan death march in the Philippines. Made in early 1944, this carbine is a valuable collector’s piece, and very representative of carbines as made and used during most of the war.

The M1A1 Carbine, adopted in May 1942, was designed to address the needs of paratroopers who needed an even more compact weapon. It featured a side-folding stock and a wooden pistol grip. The only change from the standard carbine was in the stock. Original M1A1 Carbines were produced solely by Inland from late in 1942 through the middle of 1944. Only about 140,000 M1A1s were made, making them sought-after collector pieces today.

The M4 carbine bayonet was adopted in May 1944 and began to be issued in October. It was a modification of the earlier M3 trench knife, which was previously issued to carbine users. There were 12 different manufacturers. Numerous other accessories were designed and used for the carbines. These included slings, maintenance and disassembly tools, canvas “holsters” for both the M1 and M1A1, airborne drop pouches, grenade launchers and compensators. A full range of ammo types was available, including ball, blanks, grenade launching and tracer.

Although test and small-quantity variations on the M1 Carbine design were made including a T3 infrared night-vision version, the M2 Carbine was

the main advanced development based on the M1. It featured full-automatic capability, and its parts could be incorporated on an M1. A selector switch was next to the action on the left side. This version used a 30-round magazine that could also be used in the M1 Carbine. The M2 was adopted in September 1944, but production was not initiated until May 1945. This was too late in the war for it to see significant action, if any, in WWII.

The M1 Carbine was first used in combat in the invasion of North Africa in November 1942, and became widely issued after that. The 82nd Airborne Division was the first to employ M1A1 carbines during the airdrops into Sicily in July 1943. This was the first large-scale airborne invasion in U.S. history. M1 Carbines were also used immediately following in the Italian campaign. U.S. Marines first used M1 Carbines on the Pacific islands of Tarawa and New Britain in late 1943. “Merrill’s Marauders” made effective use of carbines in the jungles of Burma in February 1944. These were the first American infantry troops to fight on the continent of Asia in the war. The D-Day invasion of Normandy in June 1944 saw widespread use of the M1 and M1A1 Carbines by the 82nd and 101st Airborne Divisions. These airborne troops used the M1A1 throughout the rest of the European campaign. The T3 Carbine with its infrared sight was first used on Okinawa in the spring of 1945. Carbines in all versions were used during the Korean War of 1950-1953. French and Vietnamese troops used carbines against communist forces during 1954 in the former French Indochina. The carbines started to be phased out of U.S. service with the introduction of the M14 rifle in 1957. The U.S. then distributed carbines widely to a number of smaller countries, where they have been used in limited wars, revolutions and civil disturbances. Some surplus M1 Carbines were sold directly to NRA members during the early 1960s.

All in all, the M1 Carbine has been a very popular and unique firearm, used widely throughout the world by the United States and its allies. Designed in haste but modified little over the years, it’s still a useful weapon and a prime collector’s piece with all its variations and manufacturers. The word “classic” fits it well.

The M2 Chronograph comes with sensors, screens and one two-foot mounting bracket. A nylon carrying case and tripod are available options. The CED7000 Shot Timer is a breakthrough in technology. No other timer to date offers this combination of advanced features, compact size and light weight. This is the "next generation" Shot Timer here today! Comes with a rechargeable battery with low-battery LCD indicator and a universal charger.

Cavalry Arms Medical Trauma Kits

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why Cavalry Arms Medical has produced trauma kits designed by Armed Forces medics.

The Cavalry Arms Medical P.T.K. (Personal Trauma Kit) contains a 15-gram package of Celox granules to control serious bleeding, Nitrile gloves, a high-intensity Chem-Light, a six-inch Emergency Bandage with a second pad, and a 4.5-inch Kerlix Roll.

The A.T.K. (Advanced Trauma Kit) contains one 15-gram package of Celox granules, Nitrile gloves, a CPR Face Barrier, two VioNex Anti-Microbial Wipes, a high-intensity Chem-Light, two 4-inch Emergency Bandages, one 4.5-inch Kerlix Roll, two 2-inch Kerlix Rolls, one 3-inch Elastic Bandage, and two 5 x 9-inch sterile Abdominal Pads. All contents of both kits are currently in use by real-world combat medics.

*FAQ About Berry's Preferred Plated Bullets

1. What is "DS?"

"Double Struck." Double-Struck bullets go through an extra sizing process after being plated. This makes the bullet 100 percent symmetrical. This can give you an edge in competition, but most shooters won't notice the difference.

2. What is the difference between Plated/Jacketed/Cast bullets?

Berry's Preferred Plated bullets begin as a swaged lead core. The plating process works through electrolysis. The swaged lead cores are tumbled in an electrically charged cyanide bath containing high-grade copper ingots. The copper clings to the lead and the longer the bullets remain in the bath, the thicker the plating.

3. How do I load Berry's Preferred Plated Bullets?

Plated bullets occupy a position between cast bullets and jacketed bullets. They are soft lead, but have a hard outer shell on them. When loading plated bullets we have found best results using low- to mid-range jacketed data in the load manual. You must use data for a bullet that has the same weight and profile as the one you are loading. Do not exceed mid-range loads.

4. How fast can I shoot these bullets?

Velocities depend on the caliber, but as a rule of thumb, we recommend you don't shoot our plated bullets over 1200 fps (feet-per-second). Our 44s actually shoot best around 1150 fps. 45s are generally good at 850-900 fps. Our bullets are NOT recommended for magnum velocities.

5. Can I shoot your plated bullets in my GLOCK?

Yes. We have a large contingent of loyal GLOCK shooters using our bullets. The plating is thick enough that you will not get lead fouling in your bore, which is the nemesis of polygonal barrels.

*DS = Double Struck, TP = Thick Plate, HB = Hollow Base, RN = Round Nose, FP = Flat Point, SWC = Semi Wadcutter, WC = Wadcutter

About SNS Casting: SNS Casting, Inc. is a family owned and operated business located in rural Flanagan, Illinois and was officially founded by Jim Stinar in the winter of 2008. Jim's casting history actually began in the mid 1980s as a hobby. This supplied not only himself but a group of friends and fellow avid shooters who were tired of paying too much for inferior products. Eventually, word was spreading throughout the surrounding states of his bullets, which were priced right for the quality.

Today, SNS Casting features seven of Magma Engineering's Mark VIII casters and three Lube Master luber/sizers fitted with M-A Systems Collators. **Our lead is a certified factory alloy of 92 percent lead, 6 percent antimony and 2 percent tin, which is purchased in 44,000-pound lots to ensure consistent quality. The lube we use is Magma blue lube.**

SNS Casting's founder/owner Jim Stinar and his son Ryan are avid USPSA (A30909, A63666) shooters, SASS members and NRA members.

NOTICE: There is a \$20.00 minimum 'Hazardous Material' (HazMat) handling fee for shipping PRIMERS. This fee is assessed in increments of 10,000 primers. Primer orders MUST be shipped separate from other items, and require a separate shipping and handling charge. Shipping and HazMat fees are not included in prices.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

K46-21894 \$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

K46-19972 \$39.95

Bore-tips™ Bore Cleaning Foam Swabs

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!"

The Bore-tips Swabs REALLY DO work. What you can't see under the foam is a plastic jig sized for a tight bore fit

which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reuseable.

Concealed Carry Tote⁴⁷

\$45⁰⁰

K46-18193

Dillon's Concealed Carry Tote accommodates all the tools you need to survive the urban jungle!

This low-profile carry case looks like a mild-mannered-computer-nerd accessory, but it's designed for your pistol as well as your PC! Made of rugged fabric, with heavy-duty zippers on all three main compartments – one designed to hold a laptop computer, one for folders and paperwork, and one in the middle for a handgun.

Inside the case are pockets and pouches that will hold spare magazines as well as folding knives, letter openers, flashlights, cell phones, full-sized 8.5"x11" paper note pads, etc. Measures 13.5" x 11.5" x 6.5" deep.

'Plan B' Day Planner

Dillon's "Plan B" Day Planner Holster holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won't draw undue attention. It looks like a typical day planner, but inside there's a holster that's adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

"Plan B" Day Planner

Comtech's STINGER

THE STINGER:

Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger today!

K46-19495 \$9.95

Arredondo Accessories' Magazine-Cleaning Brush is ideal for that little job we all dread (avoid?!). No excuse, Sir!

K46-19257 \$11.95

DeSantis Clip-Grip®

This replaces the grips on S&W J-Frame round butt revolvers. A hook on the right grip panel functions as stopping point for the revolver when tucked into your waistband.

Dillon's New Bench Wrench Fits new 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Apex Tactical Specialties Armorer's Block

Apex Tactical Specialties' Armorer's Block is designed for S&W Semi Auto M&P Pistols in all calibers, sizes and configurations, including thumb-safety models and the M&P Shield; also for GLOCK® semiauto pistols in all sizes and calibers. The Armorer's Block supports a pistol for armory work and detail disassembly. Its pre-positioned bosses, slots and holes remove pressure from critical function surfaces while pins are driven in and out. High-density polymer construction prevents marring of the frame while driving pins in and out. Made in USA.

Armorer's Block **K46-19536 \$29.95**

Take out your frustrations, and build your grip strength at the same time! Just think about...oh, socialized medicine, tax increases, high-capacity magazine bans, etc.

1 lb.	K46-15532	\$7.99
2 lb.	K46-15533	\$14.95

Note: These Come in Assorted Colors

TACCOM's **Enhanced Firing Pin** for Ciener/CMMG .22 Long Rifle AR-15 caliber conversions is a direct-replacement firing pin, made from 17-4 SS heat treated to a condition H900, to present a tough, hard firing pin that won't break or mushroom out after many firings. The tip has been designed to stick out of the hole only .030", so you will not damage your barrel by dry firing your weapon.

K46-19538 \$13.95

The **TACCOM Extreme Extractor** is a drop-in part for your Ciener/CMMG .22 Long Rifle insert that will give you constant extraction, which is **KEY** for a reliable firearm. This will help with your live-round extraction, depending on how well the factory has cut the chamber, and the type of chamber cut.

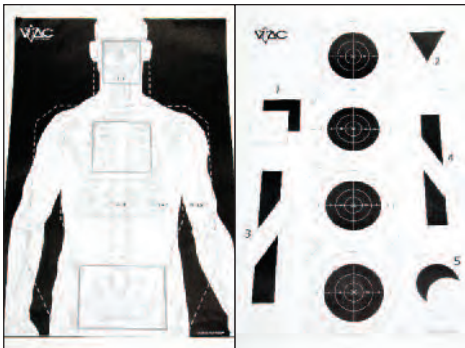

K46-19539 \$10.95

Does your .22 Long Rifle insert move back and forth in your AR upper? The **TACCOM Pressure Plug** will apply a constant pressure on your insert, always keeping it in the most forward position when the rifle is in battery. You can install and remove the pressure plug in seconds with no tools.

K46-19533 \$7.95

Ghost 3.5 Trigger Stop Connector

A. The Ghost 3.5 Trigger Stop Connector shortens trigger movement, eliminates over-travel and provides the fastest trigger reset. Can be fitted to all GLOCK pistols.

3.5 Trigger Stop **K46-14760 \$24.95**

Ghost Bullet and Forward Slide Release

The Ghost Bullet Slide Release was designed with a wider, longer thumb tab that is unobtrusive and sits closer to the frame when not in use. The Forward version addresses the issues of shooters who use the "modern technique" (with thumbs high and pointing towards the muzzle) by placing the thumb tab forward so that it sits between the thumbs, eliminating the problems shooters experience with the modern technique. It also places the thumb tab within easy reach of the forefinger of left-handed shooters.

B. Bullet Slide Release **K46-18630 \$14.95**

C. Bullet Forward Slide Release **K46-18629 19.95**

the right knee, completely crippling and immobilizing him. Peggling away at the badly wounded Ensign while addressing him in “very forcible but uncomplimentary” language, the Rebel missed four times in a row, and then hit Evans again with his fifth shot, completely taking off his right big toe.

Bleeding profusely from his four wounds, and with no rifle at hand, Evans appeared to be unarmed, so the marksman exposed himself to his seemingly helpless target. But the Rebel’s confidence was misplaced, as his teenaged victim still had his .36 Navy pistol. Evans was now enraged, for his fourth wound pulled him out of the shock of the previous three. Rolling over, carefully aiming his revolver at the sniper from the prone position, Evans later wrote:

“I knew all the time that I should kill him if I shot at him, but had not intended to do so until he shot me in the toe. My bullet went a little high, striking the poor chap in the throat and passing out at the back of his neck...[he] pitched over the parapet and rolled down near me, where he lay dead.”

After making just possibly the single most remarkable combat pistol shot in U.S. military history, Evans was still a long way from safety. One of the few surviving Marines ran inside the palisade and dragged him, almost dead from loss of blood, outside, dropping him into a shell hole under constant fire. Evans’ U.S.M.C. savior was hit and killed. Then a second Good Samaritan, an Assistant Naval Surgeon, took a canteen from a dead Marine and gave Evans some water, just before he too was killed, shot through the head. At twilight came a third attempt at rescue, when a sailor seated the half-dead Ensign on a coal shovel and pulled him away from the Rebel fort. After a short distance this third Good Samaritan was shot through both elbows, and joined Evans down on the sand.

The fourth attempt to rescue Evans was successful, at long last. After dark, two sailors carried him up the beach; a lifeboat finally made it through the surf, and took him to safety. Two days after being shot to pieces, his wounds still full of sand and beach flotsam, Evans was finally placed in a hospital bed in Norfolk. Before going to sleep, he hid his revolver under his pillow. Drifting in and out of consciousness, that night he overheard the surgeon in charge tell his assistants to “Take both legs off in the morning.” Evans passed a tormented, sleepless night. When the

doctors came the next day and he could not talk them out of their intentions, out came his pistol again. The doctors continued their amputations with other unfortunates, but passed Evans by. His .36 Navy had saved both legs, and quite possibly his life, one more time.

After incredible pain and suffering, Evans taught himself to walk again, and came back onto active duty. Over the next 30 years he sailed the seven seas, stumping around on two canes, steadily advancing in rank. He was given command of the first modern American battleship, the USS *Indiana*, in 1895. Evans’ next assignment was working closely with the new undersecretary of the Navy, Teddy Roosevelt. With T.R. when news of the USS *Maine* disaster reached them, Evans went on to command the USS *Iowa* during the Battle of Santiago. Evans was promoted to Rear Admiral in February 1901, and the following year was made Commander of the Asiatic Fleet. Fightin’ Bob Evans was finally

elevated to the pinnacle of American Naval authority; in 1905 he was given command of the Atlantic Fleet. In 1907, Roosevelt, our last President to have killed men in battle with a pistol, honored his friend and mentor Admiral Evans by naming him commander of the Great White Fleet on the first half of its round-the-world voyage.

Amongst the junior officers serving in Evans’ Great White Fleet were Ensigns William F. Halsey, Husband E. Kimmel, and Harold Stark, and the very young Midshipman Raymond Spruance. All four would become admirals in their own right, and, following Evans’ example, lead the WWII American Navy to victory in the Pacific a generation later. On May 6, 1908, as the USS *Connecticut*, Evan’s flagship, steamed through the Golden Gate, the U.S. Army artilleryman who fired the welcoming salute from his 12-inch cannon at Battery Spencer, Fort Baker, was Sergeant William T. Dillon, this writer’s grandfather. Once the fleet dropped anchor in San Francisco Bay, Mabel Burke, a 24-year-old Sausalito belle and the closest relative of Admiral Evans on the Pacific Coast, became one of the very few civilians allowed aboard his flagship to greet him. She was this writer’s grandmother. So, for the past three generations, every time a family member has contemplated a difficult pistol shot, we remember Fightin’ Bob Evans’ remarkable 1865 feat at Fort Fisher with his .36 Navy, and the marksmanship challenge of the moment, by comparison, doesn’t seem anywhere near as hard.

U.S. Navy Eli Whitney Model 1862 .36 caliber revolver, with ambidextrous Civil War holster. This was the type of small-caliber handgun used by Ensign Evans when he made the single best pistol shot in American Naval History on January 15, 1865. This pistol ended up in the California gold fields shortly after the Civil War. Photo: Dillon Collection.

Shooting Tip: Tactical

TAYLOR TACTICAL RELOAD (TTR)

The hand holding the spare magazine is brought up to the weapon's magazine well, the thumb rests on the magazine release button.

TTR-2 Still holding the magazine with the thumb and first two fingers, peel the ring and little fingers away and open up your palm to receive the partially depleted mag. Push the mag button, the mag in the gun ejects into the waiting hand's palm. Grip the magazine between the ring and little fingers and withdraw it from the gun.

MODERN TACTICAL RELOAD (MTR)

As the spare magazine is brought up to the gun butt, the support hand's index finger slips around the mag body; the magazine winds up gripped securely in your fist.

MTR-2 The partially depleted magazine is ejected into the palm of the hand.

MTR-3 The magazine is then pulled out of the gun with the index finger and thumb.

By Duane Thomas

The "tactical reload" (TR) consists of topping off the gun with a fully loaded magazine before storing the partially depleted magazine somewhere on your body. The first of these techniques to achieve popularity was the **Taylor Tactical Reload (TTR)** developed by weapons trainer Chuck Taylor, which is performed so:

1. Begin as though doing a speed reload. Pull the gun in slightly toward the body; place your shooting hand thumb on the magazine release button. At the same time, grab the magazine in your spare mag pouch with the index finger along the front of the pouch, the thumb and other three fingers wrapped around the mag body.

2. Draw the spare magazine. Bring the hand holding it up to the gun butt. Still holding the magazine with the thumb and first two fingers, peel the ring and little fingers away and open up your palm to receive the partially depleted magazine.

3. Punch the magazine release button. The magazine in the gun will eject into your palm.

4. Grip the magazine coming out of the gun between your ring and little fingers. Pull it out of the gun.

5. Insert the fresh magazine into the mag well and slap it into place.

6. Store the partially loaded magazine somewhere on your person.

The problem with the TTR is that when it's completed you have a very tenuous grasp on the old magazine being held between the ring and little fingers. It's then necessary to flip the mag around into some sort of decent grip before you can put it away. It is not at all unusual for shooters practicing this on the range, let alone under the stress of combat, to drop the magazine at this point. It may be argued that in a Tactical Reload it's extremely important to hold onto the old magazine. If it wasn't, we wouldn't be doing a Tactical Reload in the first place. This has led to development of what I call the **Modern Tactical Reload (MTR)**:

1. Again we begin as in a speed reload. Pull the gun in slightly toward the body; place the

Reloading Techniques

TTR-3 Align the spare magazine with the mag well as you would for a speedload.

TTR-4 Slap the fresh magazine home. The old magazine winds up gripped between the ring and little fingers.

MTR-4 The fresh magazine is inserted into the magazine well.

MTR-5 Slap the fresh mag home. The old magazine winds up held securely between the index and middle fingers.

“REAL” TACTICAL RELOAD
The author and many other trainers consider a speedload the “real” Tactical Reload. If time and circumstances permit, the shooter may then pick up the partially depleted magazine off the ground.

shooting hand thumb on the magazine release button. Grasp the magazine in the spare mag pouch with your index finger along the front of the pouch, thumb and other three fingers wrapped around the mag body.

2. Here's where things start getting different. As you draw the spare magazine and move it toward the gun butt, let the mag body slip between your index and middle fingers. Basically you're holding it gripped securely in your fist.

3. Bring the fresh magazine up to the gun butt; hold your hand in place to accept the old magazine as it ejects. As opposed to the Taylor technique where you hold your hand in such a fashion you can grasp the mag with your ring and little finger, in the modern Tactical Reload the two fingers doing the work are the index and middle fingers.

4. Depress the magazine release button, pop the mag into the palm of your hand, grip with index and middle fingers and extract it from the gun.

5. Insert the fresh mag and slap it home.

6. Store the partially depleted magazine

somewhere on your person.

The great strength of the MTR, currently taught by most trainers versus the TTR, is that rather than winding up with the old mag held insecurely between the ring and little fingers, instead it's gripped firmly between the far stronger and more dexterous index and middle fingers. Putting the mag away does not require juggling it into position before you can get a good hold on it; therefore chances of dropping the mag under stress are minimized.

We have not discussed in this article the **Reload With Retention (RWR)**, which in my opinion is a better technique than either sort of Tactical Reload. Of course, Massad Ayoob has commented that, in the real world, the real Tactical Reload is probably to simply do a speedload, get the whole process over with as quickly as possible and then – if you have time – reach down and pick the partially loaded magazine up off the ground. I find it hard to argue with that.

J. Dewey Mfg. Co.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits all AR-15s and AR-10s with standard and oversized take-down pins up to .316" in diameter.

To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

Evolution Gun Works

These two-piece flat checkered mainspring housings with bolt-on mag wells are similar to the patented one-piece S&A design. The mag well and checkered mainspring housing are machined from solid bar stock steel and can be used without the mag well attached, although there will be a small dovetail below (this does not impair function). This is a great replacement for plastic mainspring housings on full-size or commander model 1911s.

Stainless K46-18600 \$49.99
Blued K46-18601 49.99

Adjustable Target Sight for 1911s

This Adjustable Target Pistol Sight is precision machined and fits in a standard "Bomar slide cut." Yeah, the services of a gunsmith are required to cut the slide (unless your 1911 pistol already has a Bomar cut) but the results are worth it.

Adjustable Pistol Sight K46-18210 \$53.95

California Competition Works Magazine Storage Sleeves

California Competition Works' Magazine Storage Sleeves make it easy to organize your pistol magazines. The optional I.D. Tag/Hanger makes it less likely that you'll show up at a match with the WRONG magazines!

ElZetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

*Sand not included.

The Dillon Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snapper-release buckles. Dimensions: 66" x 27.75"

K46-18146 \$65.00

This three-piece shooting bag set is an incredible value for the money! The bags are made of durable, water-resistant 600 denier polyester and provide a steady and solid shooting system for long guns and handguns. I filled the ones in the photo with walnut tumbling media and found them to be easy to fill and much lighter to carry than when filled with sand.

Comp-Tac's Trojan Horse Long Gun Case

The Trojan Horse Long Gun Case is the first of its kind: a safe, comfortable, simple and unobtrusive way to carry your long guns with you. No longer do you need to worry about a casual observer spotting you with a "Gun" case as you transport your long guns to and from your car. Instead all they will see is a person with a sports bag. It

measures 36" Long, 4"-15" Wide, 4" Deep and features rigid side panels that provide concealment with no printing; an adjustable, padded shoulder strap with side-release buckle on either end; a heavy duty zipper with tactical speed pull attachment for quick deployment; inside divider with Molle straps; and two inside zippered pockets. Will hold up to 20" long barrel with collapsible stock.

K46-19388 \$115.00

Millett Designated Marksman Tactical Scope

The Designated Marksman Scope fills the requirements of the law-enforcement officer, rifle shooter, and the big-game hunter who needs a quick sighting system at ranges of five to 500 yards. The "Dot in a Donut" reticle allows for fast, natural aiming. The shooter's eye lines up the circle at close range, and the one-MOA dot gives accuracy at the longer ranges. Range estimation is straight forward by use of the circle out to

500 yards. Compact design, 30mm tube and bright illumination of the reticle are just a few of the many features of the DMS-1. Bright red illumination of the reticle adds to the quickness of the sighting system in day and low-light conditions. At one power it works well as a reflex sight and at longer ranges the four-X magnification gives increased accuracy.

K46-19458 \$249.95

Bushnell Trophy TRS-25 Ultra Compact Red Dot Sight

Bushnell's Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell's high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute of angle dot.

K46-11643 \$89.95

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle K46-25374 \$79.99
Scout Scope Mount for SKS Rifle K46-25373 78.99

Tactical Sports 45° Offset Mount

A twist of the wrist is – quite literally – all it takes to switch from your long-range optic to a CQB red-dot sight with Tactical Sports' 45-degree Offset Optics Mount! Fits most Picatinny rails. (Pictured with Bushnell's TRS-25, which is NOT included!)

45° Offset Optic Mount K46-14472 \$14.99

90° C-More Mount

You won't believe how much this will decrease your times from initial sight picture and target transition. You'll never lose your dot...and finding it has NEVER been easier! Turning your C-MORE (Railway or Slide Ride) 90 degrees and eliminating the rail mount will lower your dot by as much as 1" to the bore of your pistol...and lower is just going to increase your speed. And when you do torque your pistol, you'll find the dot just that much easier. Designed by Bearcave Machining and offered by TACCOM, LLC.

Ruger MK1 (pictured) K46-19535 \$79.95

Browning Buckmark K46-19534 79.95

Millett's 100-percent aircraft aluminum alloy mount allows you to attach your optics or accessories on a Picatinny rail while maintaining co-witness with your iron sights. For added versatility, the mounts are equipped with removable shims for 1" to 30mm tubes.

How do you make a Savage rifle even more accurate? Well, as the adage goes, you can't kill what you can't see, so you include a Nikon 3-9x40 BDC reticle scope, mounted and bore sighted. This unique reticle can be ballistically matched to your exact cartridge using Nikon "Spot On" Software. Coincidentally, the price of the New package is "Spot On" too. See your favorite Savage dealer for details.
