RUGER[®] COMPACT HANDGUNS

Ruger offers lightweight, compact handguns for every personal protection need.

380 AUTO LCP II

The LCP[®] II features a short, crisp trigger pull with single-action feel, inner trigger safety, improved sights, a larger grip surface and an easy-to-rack slide with an improved slide stop mechanism with a last round hold-open.

9MM LUGER LC9s[®]

Chambered in 9mm Luger and sized just slightly larger than the LCP[®], the LC9s[®] is compact, powerful and features a short, light, crisp trigger pull for faster shooting and improved accuracy.

380 AUTO LC380[®]

The LC380[®] provides 7+1 rounds of effective .380 Auto personal protection. Slim and lightweight for easy concealment, the LC380[®] combines reduced recoil with modern safety features in an easy-to-rack design.

22 LR, 22 WMR, 38 SPL +P, 9MM LUGER, 327 FED MAG, 357 MAG[®] LCR[®]

Now available in six calibers, there is a lightweight, reliable and easy-to-shoot LCR[®] for every need – from personal protection to low-cost practice at the range.

Dillon's RF 100 Automatic Primer Filler

*Eliminates the need
for primer pick-up tubes!*

*Fills the primer tube
while you reload!*

*Clear polycarbonate shield
and protective housing*

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$48.95 each.

We READ Our Mail!

I just wanted to thank you for your continued excellent customer service. I recently had a problem with my XL 650 (which I've had for at least 20 years). As usual, your people were great and sent me the needed parts, which arrived within a couple days. Great service. I bought your original progressive so long ago that I can't remember when. You upgraded it, and over the years I've gotten a 650, two other 550s, and two Square Deal Bs. Your equipment – that I've had for decades – is great, and as I said before, the service is the best in the business. Thanks again! Dillon is Number One.

Tom – tbrollini@gci.net

After 25-plus years of cranking out massive amounts of 15 different calibers of pistol and rifle ammo in quantities of from 100 rounds to many thousands of rounds per session (.223 Rem.) and having a few repair issues, that have always been promptly solved by your staff with free repair parts or good advice, I had a problem that required my RL 550B to return to you for service. It would not consistently deliver primers to the cartridge and was getting a bit "glitchey." After a few calls for technical help to fix the issues and a couple of repair parts (free) I was advised that the poor old abused (500,000-plus rounds) machine needed more intensive care and off it went. After approximately two weeks I found a Dillon box on my doorstep and what appeared to be a NEW RL 550B inside. My machine was scratched, dirty, faded and just generally looking well used. The machine in the box was bright, shiny and nice Dillon blue. It was MY old machine fully rebuilt with all kinds of new and updated parts with not a scratch or blemish anywhere. Upon returning it to its mounting spot and setting it up for .223 Rem. it knocked out 1000 rounds in about an hour and a half without a glitch. I must have gotten used to the gradual deterioration over the years. The machine is so nice and pleasant to use now that I look forward to sessions at the machine. Your company is a rare gem in this "just good enough" world we live in, and your No-B.S. warranty is great and true. I will continue to be one of your most loyal customers. Thank you to all at Dillon.

Which Dillon is Right for YOU?

Page 8

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550C

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

The Best Book on Gun(s)

Reviewed by Duane Thomas

If you love guns, and find their history fascinating, a huge frustration can be the lack of authoritative, factually correct, in-depth, well-researched, logically laid out reference books. Really, gang, I've been doing this for a while, and I've read quite a few things purporting to be textbooks on gun history. Up until recently, I had yet to be impressed. If what I wanted was a book on one particular gun design – R. Blake Stevens' excellent *The Browning High Power Automatic Pistol* comes instantly to mind – I could find books like that. But I had never read a book on the HISTORY of firearms, covering various types of guns, I felt was really worth having. That has now changed, with John Marshall's *101 Classic Firearms*.

For those of you used to reading *The Blue Press*, the name John Marshall is very familiar. He's been doing his "Classic Firearms" articles, arguably the magazine's most popular feature, that regularly occupies the centerfold, for years. *101 Classic Firearms* is essentially a collection of his centerfold articles, in many cases expanded, and with numerous new entries on firearms not previously appearing in *The Blue Press*, all collected in one place.

“A minor point, perhaps, but the cover feels good in the hands, the heavy slick paper satisfyingly substantial as you turn the pages. Reading this book is a tactile pleasure.”

Let's go back to the problems with other purported gun histories. The level of ineptitude, the number of factual errors, in such books, is appalling. I once read, in a book from a very prolific gun-book publishing house, the statement that the Makarov is essentially an enlarged Walther PP. FALSE. The Makarov is a far more refined, elegant, reliable design. For one thing, the Mak has only 25 parts, whereas the PP has 42. Right off the bat, that'll let you know these are two VERY different designs. Really, other than both being blowback, DA/SA external hammer, hinged-trigger-guard-takedown-sequence guns, and a bit of the external visual appearance, there is no crossover between these two designs at all.

Then there are the layout problems in certain books, with the information – such as it is – presented in such a disjointed fashion as far as page design, that actually reading the book is a challenge. Internally, the sequence of events being presented makes no sense; even when they can get their facts straight, still they hop back and forth in time like a Mexican jumping bean.

Let's add onto that the frequently subpar quality of the photos in such books, when they're present at all. Just pathetic.

s) History Ever Written

None of those problems afflicts *101 Classic Firearms*. To start with, the number and variety of firearms covered in this book is impressive indeed. The book's internal structure is extremely logical, progressing in chronological fashion by the firearm's year of introduction. Guns discussed in this book cover 136 years, the oldest being the U.S. Model 1855 Rifle Musket with its paper cap Maynard priming system, the most recent the Heckler & Koch Mk 23 Mod O SOCOM Pistol from 1991. Of course the biggies are covered, the Colt Single Action

Army Revolver (1873), Lee-Enfield Rifle (1895), Luger P.08 Pistol (1900), U.S. Model 1903 Springfield Rifle, Colt 1911, Thompson Submachine Gun (1921), Browning Hi-Power and Smith & Wesson .357 Magnum *aka* Model 27 (both 1935), U.S. M1 Garand (1936), Walther P.38, MP44/Sturmgewehr 44 Assault Rifle, AK-47, Ruger Standard .22 (1949), Makarov Pistol and Uzi Submachine Gun (both 1951), FN FAL and Smith & Wesson Model 39 (both 1954), U.S. M14 Rifle (1957), U.S. M16 Rifle (1962), the GLOCK (1982), the U.S. Beretta M9 Service Pistol (1985), etc. You get the idea. If it's worth writing about, it's probably in this book.

But while hitting the high points of firearms development, this book also covers some fairly obscure items on which it can actually be hard to find detailed information, certainly not all in one place. I would classify them as "oddballs," frankly. Still I found it fascinating to read about things like the Whitney Wolverine (1956), the High Standard 10B Police Shotgun and Smith & Wesson 78G/79G Pellet Guns (both 1970). Just amazing.

The information put forth in this book is quite detailed. John Marshall is an avid student of the

history of firearms development who has been researching the topic – I'm tempted to say obsessively – for around half a century. If you want to know exactly how long the barrel is on a Sterling submachine gun, what Nikolay Fyedorovich Makarov's father did for a living (and yes, Marshall gets it right that the Makarov is a far different design than the Walther PP, and their relative number of parts, as well), how many Soviet soldiers were killed by Finnish sniper Simo Hayha using, ironically enough, a Russian Mosin-

Nagant 1891/30 rifle, what all the symbols on your Japanese Type 94 Nambu Pistol mean, this is the place.

John Marshall is a talented and skilled photographer, and every firearm gets its own full-color, gun-porn-level photo. In the case of handguns it will be one large image, for long guns it's a full-length shot and quite frequently a close-up of the external mechanism, as well. Editor Mark Pixler's page designs are elegantly comprehensible.

The paper used for the interior pages is heavy and slick; the cover is textured reddish *faux* leather with embossed gold foil lettering. A minor point, perhaps, but the cover feels good in the hands, the heavy slick paper satisfyingly substantial as you turn the pages. Reading this book is a tactile pleasure. This is a NICE package, folks. Think "coffee table book."

This entire thing costs a whopping \$29.95 through Dillon Precision, which for the quality of the information presented, the quality of the book's construction, the entire package overall, is practically like giving it away. Not to put too fine a point on it, this book is a STEAL. If, like me, you're fascinated by the history and development of these wonderful devices that entrance us so much, you NEED a copy of *101 Classic Firearms*.

Strong Mount 002-22051 \$49.95

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

Spares, Accessories & Upgrades for AT 500s, BL 550s & RL 550s

AUTO PRIME SYSTEM

Includes:

Primer Housing /Shield
Primer Slides, Large/Small
Pickup Tubes, Large/Small
Pickup Tube Tips, Large/Small
Magazine Tubes, Large/Small
Mag. Orifices, Large/Small
Operating Rod
Primer Track Bearing
Housing Screws
Ret. Spring Retaining Pin

002-16627, \$84.95

PRIMER SYSTEM EARLY WARNING KIT

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system.

002-20302, \$25.95

AUTO POWDER SYSTEM

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency.

002-20251, \$92.95

OPTIONAL MAGNUM RIFLE POWDER BAR

002-21353, \$31.95

AUTO EJECT SYSTEM

Greatly increases your ammo production capabilities and adds a Cartridge Chute/Bracket and a Cartridge Bin to your reloader.

002-22120, \$31.95

AT 500 POWDER DIE

Extra powder dies allow you to move your powder measure from toolhead to toolhead without changing the "belling" adjustment.

Powder Die: 002-16629, \$19.95

Oversize Die: 002-16626, \$19.95

Plastic Funnel: 002-16617, \$5.95

POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL 450, AT 500, BL 550 or RL 550. (*Requires the use of an RL 450 powder die – see below.*)

002-20029, \$23.95

RL 450 Powder Die:

002-20308, \$21.95

RL 550C

STANDARD FEATURES:

- Accommodates Over 160 Calibers
- Uses Standard 7/8" x 14 Dies
- Loading Rate: 400-600 Rds./Hr.
- Comes With One Caliber Conversion
- Interchangeable Toolhead Assembly
- Automatic Powder Measure
- Automatic Primer System
- Lifetime "No-B.S." Warranty
- **RISK FREE 30-Day Trial!**

XL 650 (Electronic Scale)	002-22118	266.95

Dillon's Strong Mounts

increase your machine's "foot-print" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 650	002-22051	\$49.95
XL 650-only	002-22052	46.95
"SDB"	002-22223	65.95

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	002-22214	\$42.95
1050 Tray Kit	002-22215	42.95

Dillon's Toolholders are available for your RL 550, XL 650, SL 900, and Square Deal B, and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL 650 with Wrench Set	002-11555	\$30.95
XL 650 w/o Wrench Set	002-11554	19.95

One-Inch Bench Wrench	002-10842	7.95
Square-Deal-Only Wrench	002-19970	8.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	002-97126	\$149.95
----------------------	------------------	-----------------

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	002-16306	\$41.95
--	------------------	----------------

Dillon's Roller Handle gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Dillon's Case Preparation Equipment

CV-2001 O02-20493 \$189.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

CV-750 O02-19455 \$145.95

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To

CM-2000 Case/Media Separator O02-20675 \$75.95

CM-500 Case/Media Separator O02-21045 \$47.95

accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers: Case Cleaners are available in 220 volt!

Euro CV-2001 O02-22047 \$214.95
Euro CV-750 O02-19473 \$170.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners now have a Five-Year Warranty on the electric motor.

Rapid Polish

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run.

Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **O02-13804 \$8.95**
Case (20 pc.) **O02-20255 135.95**

Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

8 oz. bottle **O02-13733 \$8.95**
Case (20 pc.) **O02-20256 135.95**

Half and Half 10 bottles of polish /10 of lube
Case (20 pc.) **O02-21375 \$135.95**

Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.

15-pound bag **O02-13287 \$23.95**

Ground corn cob polishing media – the best there is for that final polish.

10-pound bag **O02-13496 \$15.95**

Super 1050/RL 1050 Short Trim Die Toolhead

O02-62219
\$224.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. (NOTE: the Blue 1050 toolhead stand - Part Number O02-62200, \$49.95 - is not included.)

RAPID ACCESS - DEEP CONCEALMENT - NO COMPROMISE™

The comfort and convenience of pocket carry, now for standard sized pistols. Don't downsize your carry gun, Upgrade your pockets!

- ◆ Extra large front pocket conceals most pistols and revolvers
- ◆ Wide opening for fast one-handed draw
- ◆ Lint-free, snag-free, padded ballistic nylon pocket
- ◆ Relaxed fit for full range of motion

rapid access • deep concealment • no compromise

Dillon's New Rapid Trim 1500 Case Trimmer ²³

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **O02-62164** is **\$330.95**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **O02-13141**, are **\$19.95** each. Upper lock rings, **O02-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Dillon's Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access, has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle

Conceal-Carry Performance Series

Mernickle's "Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor

Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original. This belt is a favorite with law enforcement, military personnel, fire-

fighters, paramedics, etc. *Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.*

ANNOUNCING: Mr. Bulletfeeder® by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

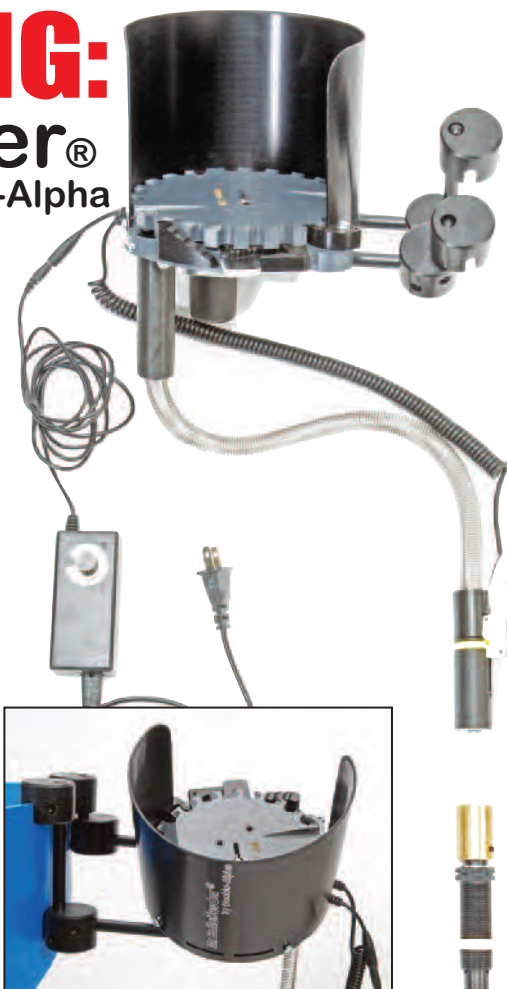

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collar to be mounted onto the case-feeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Mr. Bulletfeeder® Replacement Parts & Spares

Having separate Bullet Dropper Dies allows you to quickly swap toolheads of the same caliber sizes without having to remove and readjust the bullet dropper die.

The Output Tube Assembly is what connects the Mr. Bulletfeeder by DAA's collar to the dropper. It feeds the bullets into the dropper, keeping them aligned and feeding smoothly. The Small Output Tube Assembly is required for the rifle calibers (both .223 and .308) as well as when loading very short, light 9mm bullets, such as many of the 90-grain bullets available. The Large Output Tube Assembly is required when loading 9mm (over 115-grain bullets), .40, or 45.

Use a spacer? This four-pack of Nose Guide Spacers is identical to what comes with the Mr. Bulletfeeder. These are used to adjust the height of bullets, so they don't spill out or flip upside-down.

Dillon's Pistol Die Sets

Size Die

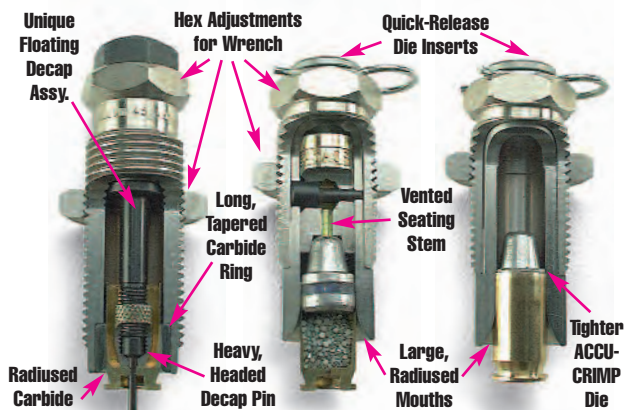

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the tool-head and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

Dillon's Rifle Die Sets

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a head-space case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Dillon Rifle Dies (Three-Die Sets)

.223 Remington	O02-10839	\$68.95
.308 Winchester	O02-15574	68.95
.30-06 Springfield	O02-10840	68.95

Dillon Carbide Rifle Dies (Three-Die Sets)

.223 Remington	O02-10096	\$164.95

Guncrafter Industries H.O.S.S. .45

By Mark Pixler

There are some things I just plain suck at (more, in fact, than I care to think about) and one of them is shooting a 1911. Despite my best efforts when I was in the Coast Guard, I never qualified any higher than marksman, and when I was shooting IPSC/USPSA with a 1991A1, I never made it out of D class. That being said, however, I've always loved the gun. I've owned several over the years, shot some of them better than others, but always ended up trading them off for something else (usually a revolver of some kind).

Well, it's entirely possible that I've finally found one I can't live without, and that might be because it's NOT your great-grandpa's 1911. It's the Guncrafter Industries, LLC Heavy Operating Shooting System (H.O.S.S.) Pistol. I think of it as if someone were to compare a half-ton pickup truck to a three-quarter- or perhaps even a one-ton-pickup truck. It still looks like a pickup truck, only stronger.

Given that Guncrafter Industries specializes in .50 Caliber 1911s, it only makes sense that they would be the ones to craft a H.O.S.S. in .45 ACP. What Alex Zimmermann, president of Guncrafter Industries, did to improve the strength, longevity and overall reliability of the 1911 was to focus on "beefing up" the following parts: extractor, slide stop, plunger tube, ejector, barrel link, barrel bushing and the barrel itself.

The Extractor in your great-grandpa's 1911 is .150" wide. Alex increased it to .200", an increase of 33 percent, and he uses 4340 Chrome Moly steel. "An extractor is basically a

leaf spring," Alex explains, "So the less it has to flex, the longer the service life."

The Slide Stop in your great-grandpa's 1911 is .200" diameter. Alex increased it to .250" diameter, again, a 33 percent increase. "Engineering principles tell us that when you increase the diameter by 33 percent, you increase the strength by 77 percent," said Alex.

You can see where this is going, right?

The Plunger Tube in your great-grandpa's 1911 is secured with two posts and is comparatively thin walled. The H.O.S.S.'s plunger tube is thick walled, secured with four posts and made of 4130 Chrome Moly steel. Alex credits his good friend and Master Gunsmith Ned Christiansen for the idea of the improved plunger tube. While it's easy to overlook this humble little part, if it were to come loose or become dented, it could trap the thumb safety in "safe", "fire" or between positions. None of which is a good thing. The H.O.S.S. plunger tube will never come loose, and it's extremely unlikely you'll ever dent it.

The Ejector in your great-grandpa's 1911 can shear off, resulting in an instant, and non-repairable-in-the-field stoppage. The simple solution was to increase the post size so that it will never break. Alex said, "We made it more than twice the size of a standard ejector post and increased the radius where the shaft meets the body. Problem solved."

The Barrel Link in your great-grandpa's 1911 usually fails because of improper installation (someone selected the wrong-length link) or

Continued on Page 39

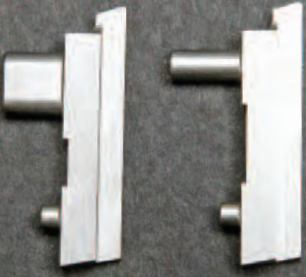

The H.O.S.S. extractor (left) is 33 percent larger than the extractor in a standard 1911.

The H.O.S.S. slide stop (top) is also 33 percent larger than the slide stop in a standard 1911.

The H.O.S.S. plunger tube (left) is secured with four posts and is thicker walled than that of a standard 1911.

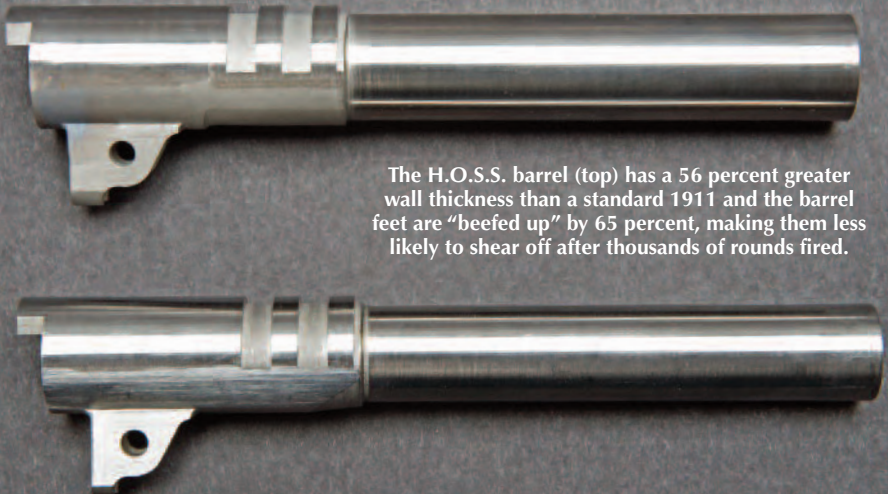

The H.O.S.S. ejector (left) is much less likely to shear off than the standard 1911 ejector.

The H.O.S.S. barrel link (left) is wider by 22 percent than the standard 1911 barrel link.

The H.O.S.S. barrel bushing (top) has a 56 percent thicker flange than a standard 1911.

The H.O.S.S. barrel (top) has a 56 percent greater wall thickness than a standard 1911 and the barrel feet are "beefed up" by 65 percent, making them less likely to shear off after thousands of rounds fired.

from the wear and tear of thousands of rounds. Eliminating the “weak link” (See what I did there?) Alex increased the width by 22 percent and used a hardened link cross pin. And, obviously, GI’s gunsmiths are carefully fitting the links on every H.O.S.S.

The Barrel is the most important part of your great-grandpa’s 1911, and the one on the H.O.S.S. has a chamber and wall thickness 56 percent greater. Hence, should anything go wrong with your ammunition, the safety margin is unprecedented. Alex said the larger diameter also increases the surface area where the locking lugs engage the slide, ensuring that the barrel will stay tight and not develop endshake after tens of thousands of rounds fired. There’s also the possibility of a standard 1911’s barrel feet shearing off after thousands of rounds. “We beefed up the barrel feet by 65 percent to greatly reduce this possibility,” Alex explained, “And in conjunction with the stronger slide stop and barrel link, this high-stress area has been fortified to the umpteenth degree!”

The Barrel Bushing flange in your great-grandpa’s 1911 is about .090” thick. Obviously, the bigger barrel in the H.O.S.S. is going to require a bigger bushing. Guncrafter Industries increased the thickness of the barrel bushing flange by 56 percent to .140”. Alex said the thicker flange obviously adds strength, and it also adds more protection to the muzzle.

O.K., I think we’ve established that the H.O.S.S. is not your great-grandpa’s 1911. It IS a unique approach to re-engineering a classic firearm by identifying possible problem areas and eliminating them. Alex explains his approach in a nutshell: “Where a standard 1911 might have a parts failure after X-number of rounds, we have now decreased the likelihood of any failure exponentially. In fact, with ‘normal’ use it might never happen. In military terms, what we are talking about is the Mean Time Between Failures (MTBF), and every gain in this respect is significant.”

So, how does “not your great-grandpa’s 1911” shoot? I’d been wanting to shoot the H.O.S.S. at one of the local IDPA club matches I shoot, but because of scheduling conflicts and some brutally hot – as in record-breaking – weather, I hadn’t been able to get to the range. Thanks to the nice folks at The Scottsdale Gun Club (www.scottsdale-gunclub.com) however, I was able to test the H.O.S.S. at their air-conditioned indoor range.

I wasn’t able to bench rest the gun there, so I shot at three See Hit “25-yard Timed and Rapid Fire Pistol Target” Repair Centers (Part# 002-16328) with a 5-1/2” bullseye. I wasn’t shooting either timed or rapid fire, but in slow-fire mode (my usual), I was able to keep 10 rounds in the black part of two of the three targets at 25 yards. On the third target, two of the hits drifted into the 8 ring. My fault, I’m sure.

Then I moved on to four 22” x 35” USPSA/IPSC Paper Practice Targets (Part# 002-15836) that happened to be in my photo studio from when I photographed them for the website. I shot 20 rounds at the first target at 25 yards. My goal was to put 10 rounds into the A zone and another 10 into the “head box” A/B zone. (I KNOW I can’t put all 10 shots into the head box A zone at 25 yards.) I did OK on the chest A zone, keeping all 10 rounds inside. On the head box, not so much. I kept five in the A zone, but the rest went south. Time to move the target up to 10 yards.

At 10 yards, I attempted some rapid fire, and managed not to totally embarrass myself. When the smoke cleared, there was a “generous” group in the center of the target, with eight A hits and two Cs. Then I tried the same thing aimed at the head box and managed to keep nine in the B zone with one of the nine touching the line of the A zone and the tenth just over the line into the C zone. So much for rapid fire that day.

On the last two targets, I tried to be deliberate and keep

all my shots in either the head box or the chest A zone at 10 yards. I succeeded! On my last target, I even managed to keep five shots inside the head box A zone. My work here is done!

So, while Rob Leatham has nothing whatsoever to worry about from me, I think with some practice, maybe a new eyewear prescription, and a few matches under my belt with the H.O.S.S., I might have found a 1911 I can actually shoot!

What’s this thing cost? Aye, there’s the rub. It, being a custom gun, carries a custom-gun price tag. MSRP is \$3,799. Considering what you get for your money, however, it just might be worth selling of some of your “lesser” firearms to fund the purchase. While it’s not YOUR great-grandfather’s 1911, it just MIGHT be the one that gets passed down to YOUR great-grandson or daughter!

CCW Tactical Shotshell Strippers⁴¹

California Competition Works' Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

Tandem Tactical Stripper **O02-00303** \$55.00

A. B.

CLASSIC FIREARMS: The Model 1895

By John Marshall

Many believe that the first U.S. military high-velocity small-caliber rifle round was the 5.56mm NATO cartridge used in the M16 family. Nope. They would be wrong, and not even close. Think way back to 1895. In that year, the U.S. Navy adopted the Model 1895 Lee straight-pull rifle, firing a 6mm (.236) smokeless powder cartridge. Many folks have never heard of it, but it was in fact a standard rifle for both the U.S. Navy and the U.S. Marine Corps from 1895 to 1903. It was employed during the Spanish-American War, the Philippine-American War, the Chinese Boxer Rebellion, and the Moro Rebellion. The Navy even had some in inventory as late as the 1920s. The quick-firing straight-pull action of the rifle was innovative and the relatively small-bore cartridge was way ahead of its time. It was also our first military rifle to effectively use a clip-fed magazine. However, only about 15,000 were produced for service before the rifle was discontinued, making surviving examples prized collector items today.

The Model 1895 straight-pull action was conceived by James Paris Lee (1831-1904). Lee was born in Scotland, but eventually became a United States citizen. He is perhaps best known for the Lee-Metford and Lee-Enfield service rifles, but the Lee Navy was almost certainly his most innovative invention. This rifle had an action requiring only two motions (forward and back) rather than the usual four found in Mauser-style rotating bolt actions. The obvious advantage here was rapidity of fire. Instead of rotating the bolt to lock and unlock, Lee's design cammed the rear of the bolt up out of locking engagement at the rear of the receiver. This allowed it to be drawn back at an upward angle to withdraw the fired case and eject it. Pressing the bolt handle forward chambered a round from the magazine and then cammed the bolt back down into locking engagement. An unusual floating extractor/ejector extended forward when opening the bolt. It withdrew and ejected the fired case, and also kept the cartridges in the magazine from popping up prematurely. The rifle incor-

porated a novel clip-fed magazine, which was a departure from the usual Mauser system. In Lee's design, the clip was inserted from above into the magazine together with the five cartridges it contained. On loading, an internal cam disengaged a retaining spring in the clip. After the first cartridge was loaded, the clip fell free through the bottom of the magazine. As an alternative, the magazine could be loaded with individual rounds.

The cartridge the rifle utilized was variously called the 6mm U.S.N. or the 6mm Lee Navy. This was the first U.S. service cartridge to use the metric system in its designation. It was to be our smallest military caliber until the adoption of the 5.56x45mm NATO cartridge in 1964. The first versions of these .236-caliber cartridges were loaded by Winchester. These used round-nosed cupronickel steel-jacketed lead-core bullets, each weighing 135 grains. In 1897, a new loading was developed using a 112-grain round-nosed copper-jacketed bullet that was propelled at 2,650 feet per second. The copper jackets improved barrel life over the previous steel jackets. These rounds had more penetration ability than the standard .30 Army (.30/40 Krag) cartridge. The case was semi-rimmed and could be used either in the Lee rifle or the M1895 Colt-Browning machine gun.

The 6mm ammo weighed less than the standard .30 Army cartridges. In fact, 220 of the 6mm rounds weighed about the same as 160 Army cartridges. This enabled Navy or Marine combatants to pack a standard load of 180 rounds, carried in 5-round clips in black leather ammunition pouches. Army troops usually carried a standard load of 100 individual rounds in Mills looped cartridge belts for their Krag-Jorgensen rifles.

The adoption of the Lee straight-pull by the U.S. Navy followed competitive service trials in which rifles designed by Van Patten, Daudetrau, Briggs-Kneeland, Miles, Russell-Livermore, Remington, Luger, Durst, and Lee (turnbolts) participated. Its official designation was Lee Rifle, Model of 1895, caliber 6-mm. The first naval contract for its manufacture went to Winchester in

5 Lee Navy 6mm Straight-Pull Rifle

It was our first military rifle to effectively use a clip-fed magazine.

January 1896 for 10,000 rifles. Completion of this contract was not accomplished until 1897, complicated by manufacturing problems, ammunition changes, and re-calibration of the sights. A second contract was made with Winchester for an additional 5,000 rifles. Deliveries of this contract began in August 1898 and were completed in December of that year.

The receivers of the naval rifles were marked "U.S.N." with an anchor, a serial number, and inspector's initials. There were two inspectors, Ensign Nathan C. Twining (N.C.T.) and Lieutenant John N. Jordan (J.N.J.).

An interesting fact is that 54 of these rifles were salvaged from the battleship U.S.S. Maine (sunk in Havana Harbor in 1898) and restored to working order for the Navy. A number of references give the specific serial numbers, and today these weapons bring very high collector prices.

The Model 1895 measured almost 48 inches in length, and weighed about 8 pounds and 8 ounces. The barrel was 28 inches long. The rear sight was of the military ladder type, and had graduations up to 2,000 yards. The front sight was a blade. On the left side of the receiver were a knurled bolt release lever and a vertically sliding safety. The stock was full-length, had sling swivels and a stacking swivel. The metal surfaces were blued. In service, the rifle was issued with a sling, ammunition bandoliers, and an 8.18-inch knife-bayonet similar to that used on the Krag rifles. These were the forerunners of the shorter bayonets issued for service rifles today.

In service, the Lee was issued to all Marine companies seeing action in Cuba during the Spanish-American War, as well being standard issue for Navy ships. The first major combat action for the

rifle was in the campaign to capture Guantanamo Bay, June 9-14, 1898, by the First Marine Battalion. The range and rapidity of their fire so impressed the Spaniards after one battle that they reported they had been attacked by 10,000 Americans! Through the Moro Rebellion in the Philippines, there were reports that the 6mm cartridge lacked stopping power and tended to over-penetrate the bodies of the adrenalin-crazed, bolo-wielding Moros. During the Boxer rebellion in China, the Marine Legation Guard found the round quite adequate, and they were glad that ammunition supplies weighed less heavily during transportation.

In December 1898, a board of officers from the Army, Navy and Marines recommended that all services standardize on the .30 Army cartridge and the small arms and machine guns chambered for it. This recommendation was approved by the War Department. In November 1899, the Navy accordingly placed its first contract for 1,000 Krag-Jorgensen rifles chambered for the Army round. However, the Lee Navy rifle continued to see primary service through the turn of the 20th Century, at least through 1903. The straight-pulls could be found on Navy ships even into the 1920s, although they were mostly used as secondary and/or drill weapons.

Winchester manufactured about 5,000 Lee straight-pull sporting arms for the civilian market, and these are rarely encountered now. An off-spring of the cartridge used in the Lee straight-pull rifles is the .220 Swift, which is basically a necked-down 6mm Lee round. It's still in relatively wide use. Today, the interesting Lee rifle is little known, but marked a number of significant firsts for our military. It certainly deserves a solid place among the classics.

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

O02-21894 \$44.95

Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Berry's Mfg. Pan Sifter

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

O02-19972 \$39.95

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mms.

Made in the USA and comes with a lifetime warranty.

The One That Got Away

Colt Model 1903 .32ACP Pocket Pistol

Reviewed by Peter Caroline

Gun collecting is like fishing; the most desirable trophies are always the ones that got away. I remember some of mine all too well: a leather-cased Mauser Broomhandle, London marked, with holster stock and accessories, for \$100; slightly DEWATED Thompson 1928A1s and StG44s, for \$79.95 each; a cased Borchardt pistol, w/shoulder stock, \$300. All the above could have been mine if I'd had the cash, which I didn't.

The one that pained the most, however, was a Colt Model 1903 .32 ACP "Hammerless" Pocket Pistol, Parkerized and marked "U.S. Property." This was the handgun issued by the U.S. military to general officers, rear echelon and non-combatant personnel and O.S.S. types. It was unfired, in the original box and brown wax paper wrapper. My local gun shop had it priced at \$65, which was \$60 more than I had in my wallet. I was fresh out of the Army and commuting to graduate busi-

ness school at the time, and the five bucks represented gas and lunch money.

Many years later, at the 2015 SHOT Show in Las Vegas, I visited the Colt booth and spotted what appeared to be a brand new Model 1903, with a polished blue finish. It had all the appropriate Colt markings, but was actually not made by Colt. It was made for Colt by U.S. Armament Corporation of Ephrata, Pennsylvania, the same outfit that makes the \$50,000 brass Gatling gun replica for Colt. I asked if were they planning on making a parkerized "U.S. Property" version. The answer was yes, and the price was relatively reasonable, so I signed up for one.

I never did hear back from Colt or U.S. Armament Corp., but I did receive a promotional flyer from MGE Wholesale in South Bend, Indiana, announcing that they were offering the new Colt Model 1903, in both parkerized and polished blue versions. I was not about to let this opportunity

slip by yet one more time, so I put in my order.

When the package arrived, I was not disappointed. The pistol was ensconced in a brown cardboard box, like the original, and was wrapped in brown waxed paper, typical of the old Colt military packaging. Ditto the 8-round magazine, which was stamped "CAL. 32 COLT" on the baseplate. The pistol itself is nearly identical to the original Model 1903 that I couldn't afford way back when. The only difference is, the Rampant Colt grip escutcheon is gold on the new version, whereas the original, as I recall, was silver. The sights, identical to those of the original, are miniscule almost to the point of invisibility. Unlike the original, this new reproduction does not have a magazine safety (*Gott sei dank!*). The gun came with a modern Colt instruction and safety manual, containing the usual CYA safety warnings, plus reprints of the original Colt instruction manual and the 1945 Bureau of Ordnance parts manual.

I have owned, and shot, several commercial Colt Model 1903s over the years. All were aged and well-used specimens, and rather loose. This new one is extremely tight, with no play whatsoever in the slide. Takedown, which involves pulling back the slide to a designated point and rotating the barrel 90 degrees, is a chore. I've done it many times on the older specimens...easy breezy. Not so, on the new one. I'd guess that this new reproduction is built to much tighter toler-

ances, and on better machinery, than the originals. I do own a well-worn 1904-vintage Type 1, which has a consistent 5-1/2-lb. trigger pull. This new one runs about 9-1/2 – 10 lbs., and the grip safety is in dire need of a memory bump.

Despite my reservations regarding the sights and trigger pull, this new iteration is actually a very decent shooter. Using an old box of Remington green box Kleanbore ammo, with 71-gr. FMJ bullets, the pistol fed and extracted flawlessly. At ten paces, five-round groups were about two inches in diameter and three inches above point of aim, good enough for government work. Five-round tests with Remington and Prvi Partizan 71-gr. FMJ and Wolf Gold 71-gr. JHP produced identical results. Compared to its contemporary rivals... Remington, Savage, Mauser, *et al.*... the Colt Model 1903 has a relatively simple and straightforward mechanism, not prone to failure.

At an MSRP of \$1,495, this .32 ACP pistol is hardly anyone's first choice as a self-defense weapon. But, like the original, it is pleasing to the eye and the hand. It is a meticulously crafted, limited-edition collectible at about half the price of an original in NIB condition. To quote my saner half, "Boys and their toys!"

RCBS Trim Pro-2™ Case Trimmer O02-43231 \$139.95

The RCBS Trim Pro-2 manual case trimmer now features a spring-loaded "universal" shell holder that will accommodate case head diameters from .250" to .625". Comes with pilot calibers: .22, .24, .25, .27, .28, .30, .35, .44 and .45.

Dillon's Bench Wrench Fits 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

ballistic
chronograph
to measure
the velocity of
his handloads.**

By Oleg Volk

Pistol-caliber carbines have a history going back to the first metallic cartridges. They have recently resurged in popularity for various reasons, such as relatively low cost of ammunition, moderate report and recoil compared to rifle loads, good accuracy and terminal performance compared to handguns, reduced range backstop requirements, and often just the sheer fun of operating varied and esoteric designs.

During a recent test of a variety of .357 Magnum ammunition, the great number of sometimes-contradictory demands on factory loads became very obvious. For example, a load must develop useful velocity and minimal muzzle flash from a revolver, a requirement directly at odds with the need to clear the bore of a carbine barrel. If loaded with an expanding bullet, it must perform in a fairly wide range of velocities, which depend not only on the barrel length but also on the distance from the target. The pressure must be sufficient for obturation, but not so great as to complicate extraction, especially of multiple casings at once from revolvers or of still-hot casings from carbines or pistols. A visit to the Federal Ammunition plant in Anoka, Minnesota, really opened my eyes to the amount of research required for the development of multipurpose pistol ammunition. The number of compromises required in the specifications of any general-use cartridge is considerable, and grows more extensive as specific rounds are put into new uses. For

example, Ruger .44 Magnum semiauto carbines and Coonan and Desert Eagle semiauto pistols in .357 Magnum all have additional requirements relative to the more traditional manual actions. Even manually operated long guns can be picky, Spencers being notoriously sensitive to overall cartridge length.

Speciality ammunition makers and hobbyist reloaders alike get around this issue by making custom cartridges meant for a narrow range of firearms and for very specific uses. The process of figuring out custom loads may be helped along by testing of existing commercial cartridges and seeing what improvements are possible. Sometimes the changes to the load are dictated as much by the intended-use distance as by the launch platform. Good examples of specialized commercial loads are two Overwatch brand 9mm Luger cartridges offered by Maker Bullets. Propelled by a mix of slow powders, they develop high velocities from 16-inch barrels, 1500 fps for the 115 gr. and 1850 fps for the 77 gr. Both loads are very accurate, and both show consistent terminal performance thanks to well-designed, all-copper hollow-point bullets. While accomplishing all that with standard pressure, and fully compatible with various self-loading actions, these cartridges are extremely inefficient from handguns, clocking no more than 900 fps and 1000 fps from 4-inch pistols respectively. For a general-purpose load, that would be unacceptable, but the ammunition isn't marketed as such.

1-Caliber Carbines

Unlike the very capable Overwatch offerings, my own handloads for a .44 Magnum Henry carbine yielded surprises at the range. On the plus side, 240-gr. Hornady XTP and Sierra JHC bullets pushed by relatively slow H110 powder were both fast – 1750 fps at the muzzle of the 20-inch barrel – and accurate. 1.25 MOA is quite an accomplishment for a lever action with a low-magnification scope. The unexpected factor was terminal performance: fired into a gel block at 5 yards, “controlled expansion” Hornady XTP fragmented violently, producing a 24-inch deep cone of small lead and copper fragments. Although Hornady lists XTP 240 gr. as suitable for 900- to 1800-fps range, something as simple as slightly cooler gel temperature made the bullet fail to expand as designed. It’s quite likely that moving the test media further out would have produced a more conventional result. Sierra JHC starts fragmenting around 1650 fps, so it would break apart even more readily than the XTP when pushed fast. The next question is whether such terminal behavior is desirable. For short-range self-defense against humanoids, certainly. A 240-gr. frangible has plenty of penetration to go completely through a torso without endangering anyone behind it. If the short-range use is against something tougher, like a large hog, perhaps a more solid projectile would make more sense. And for a deer at a hundred yards, this is ideal, as by then the projectile would slow down to the velocity anticipated by its designers. Unlike institutional users, an individual enthusiast can afford to load specialized ammunition for every purpose.

In testing Liberty 50-gr. hypervelocity frangible ammunition, we ran into a different issue. In 9mm Luger, the load worked fine from pistols but either didn’t cycle semiauto carbines or caused premature bolt opening, fracturing the cases. It was also wildly inaccurate. With .357 Magnum using the same bullets and slightly slower powder, different issues arose. Accuracy was very good, and felt recoil negligible, but none of the handguns could be used for anything serious. The load wouldn’t cycle a Coonan semiauto pistol, and none of the revolvers would extract spent casings. A pump-action carbine however, would extract them just fine, not surprising for a robust manual action working on a single casing at a time. Accuracy was decent but not amazing, since standard devia-

tion was over 40 fps on the base velocity averaging just above 2600 fps. A load like this could work well for short-range defense, but probably wouldn’t be the first choice for a varmint hunting load. A competent reloader working specifically towards long-gun use can produce a more consistent load with lower peak pressure. The commercial maker, advertising this ammunition mainly to the more-populous handgun shooters, has no choice but to go with a faster powder.

In reloading, it’s important to decide which parameters are important. For example, a practice load for a snubie revolver can be made with minimal flash and decent velocity, but the individual cartridges would have to be marked lest they

are fired from a long gun and possibly cause a bore obstruction. A reloader working to create carbine fodder has an easier time in regards to safety. A carbine-specific cartridge may be flashy and inefficient in a handgun, but it’s usually safe to fire. Cartridges loaded at the top of the pressure envelope for specific strong actions, like the falling block, would be the notable exceptions. Again, marking individual cartridges rather than whole boxes would be a safer practice.

If optimizing for a tolerable report is the intent, the load may be quite inefficient and yet be perfectly effective for the intended purpose. Especially with calibers originating in the blackpowder days, the amount of case volume allows for massive variety in powder to bullet ratio. In guns with faster twist barrels, even a .355” 230-gr. full wadcutter would stabilize fine and exit just under 900 fps. Since the chamber pressure for this combination of weight and velocity isn’t even close to maximum, it may be safely accomplished with a fairly fast powder. The benefits: non-existent flash, and a mild report courtesy of the gas pressure rapidly declining as the projectile nears the muzzle. Such a handload would have excellent short-range penetration and lend itself to quick follow-up shots. Considering how few carbine shooters optimize for these particular features, is it any wonder that nobody offers it commercially? In the end, whether optimizing for accuracy in a specific gun, for shooting comfort, for terminal performance or for economical plinking, the handloader has the major advantage over the commercial manufacturer – the knowledge of how each batch of ammunition will be used.

NOTE: ".38" series cases fit .38 Super, .32-20, .30 Carbine and .30 Mauser; "9mm" series cases fit .30 Luger, 9 x 21 and .380; ".44" series cases fit .41 Mag, .44-40 and .45 Colt; and ".45" series cases fit 10 mm and .40 S&W. "Small rifle" cases fit .222, .223 to 7.62 x 39 length; 20 round "medium rifle" cases fit 7.62 x 39, .22-250 to .30-06 length; 50 round "medium rifle" cases fit .22-250, .308 to .30-30 length; and "large rifle" cases fit .30-06, 8 x 57 length to all belted cartridges.

Extra Loading Data Labels, O02-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use. Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL650 cartridge bins are 6-3/4" long x 3-

7/16" wide x 2-13/16" deep.

- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Description	Stock #	Each	6 ea.	12 ea.

"SL 900" Bin	O02-17125	10.50	56.94	106.92

Dillon Utility Boxes

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Description	Stock #	Each	5 ea.

Swab-its – A Swab for Every Job! ⁶⁵

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that “whisky-tango-foxtrot” look on his face. “Hi,” I said (*thinking fast*), “I’m trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!” The **Bore-tips Swabs** REALLY DO work. What you can’t see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

M-PRO7™ Copper Remover works up to four times faster than ammonia-based cleaners and is odor free.

4 oz. **002-19370** **\$11.95**

FrogLube

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

4 Oz. Paste **002-15443** **\$10.99**
4 Oz. Liquid **002-15444** **17.59**

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is for use in warm weather (F60°+). Lite is a thinner viscosity for lower temperatures (F30°+).
Slide-Glide Standard **002-15571** **\$7.95**
Slide-Glide Lite **002-15572** **7.95**

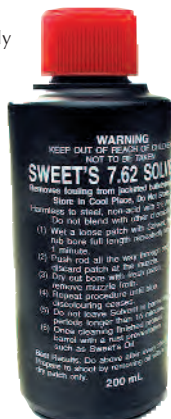

Microlon UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

002-75125 **\$9.95**

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

Dewey's AR-Link Cleaning Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

Gun Stupidity Must End! ⁶⁹

By Alan Korwin – **The Uninvited Ombudsman**

Misguided gun mythology is being foisted on the public and it is doing harm. Whether this is deliberate, a plot, simply ignorant, prejudice, acting out on stereotypes, a power grab – it doesn't matter. What matters is it must stop. Pro-rights and anti-rights advocates just want to point fingers at each other. Children are dangerously misled. Lives are being lost needlessly. But wait – there's hope – stupidity can be repaired.

People running Hollywood and TV are the primary culprits. They'll be first to cry First Amendment and insist, "We can do whatever we want!" I'll be first to agree. They are completely free to be idiots, and mislead and endanger the entire nation. They get to skate, scot-free, that's our way. It's just time to make it clear that's what they're doing. The media are completely free to be idiots, and mislead and endanger the entire nation.

The wild proliferation of guns and gun misuse portrayed on screens nationally gets acted out in public with dangerous mishandling, accidents and abysmally misinformed legislation. We even have gangsters who try to shoot sidearms sideways causing jams and adversely affecting aim (maybe that's a good thing). People who understand firearms – about 100 million of us – would find all that programming so much more credible and enjoyable if the gun parts were even slightly more realistic. The producers obviously don't know any better, if their products are any gauge.

It gives us shivers to watch cops constantly point their guns at each other, suspects, witnesses, reporters, fingers on the triggers, with no apparent awareness of their surroundings, backstops – just the worst gun-handling techniques imaginable. It makes you wonder if the writers and directors ever actually handled a firearm. We know the answer – most haven't. It's evident.

When a detective lieutenant holds a gun cup-and-saucer style, or puts a thumb behind the slide of a pistol where the skin will be torn right off with the first shot – what a joke. No one makes that mistake twice. These folks are clueless.

OK, we get it, a gun that doesn't run out of ammo increases dramatic tension even if it does increase stupidity. In real life, even at a range, you spend most of your time reloading. Newcomers at a range are stunned by this fact, because all they have to go by is what they picked up from pop culture, so much of it hopelessly wrong.

Phony or fake, pick your word. Racking the slide on a sidearm or shotgun in every scene – which would just unload it – makes a cool sight and sound, but it leaves you with an empty gun. The live

shells never get ejected on screen, so maybe that's OK. Except it's not, it's – what's the word – stupid. Do it each time the script progresses one beat? It's as lame as a cooking show frying eggs with shells still on. Jump into a doorway so you're silhouetted and framed for your enemy to see you clearly and fire? Who writes these things, Bizzaro?

We have such a wonderful (but lost) opportunity to tell these same mindless shoot-'em-ups and simultaneously inculcate the public in reasonable gun-handling techniques. Even the statist stories of cops and robbers, or of evil people winning – a sad but recurrent Hollywood theme these days – provide a platform for, say, indexing your trigger finger on the frame, not resting it on the trigger – and help limit accidents waiting to happen. They actually do the index-finger thing sometimes, you've seen that. Does it hurt the show? Nah.

When actors start practicing good muzzle control, and do that amazing dance instead of the point-at-your-friends waltz they do now, people will pick up on this. The producers who do this

will win audiences and accolade, loudly and subliminally, and create even more realistic, credible products. I can barely watch Spock and Kirk run around with Phasers, look closely next time, sheesh.

Anti-gun-rights groups have dropped the worn out and unpopular "control" moniker, replacing it with "safety," but no one is fooled. They don't really know or do anything

about firearms that would directly work toward gun safety. That's what their arch enemy NRA trainers do. Teach gun safety. Michael Bloomberg's dark-money funded "safety" groups typically can't even tell you what the gun-safety rules are.

Teach gun safety, abandon gun stupidity. Public media could do it. No, there's little hope it will happen anytime soon, the stupidity is ingrained and tenacious. Based on evidence, the political left likes gun stupidity, they promote it. But we know it's there, and we're watching. It makes them look so...well...stupid. That can't possibly be what they want, can it? Or does gun stupidity promote the left's (read: marxist/socialist) ultimate goal of gun confiscation?

They object loudly to voicing that goal out loud. So let's ask the question. What guns does the left believe the public should be "allowed" to own? Or is that a stupid question? There are no stupid questions.

Alan Korwin, a national columnist, award-winning author of 14 books and veteran of more than 1,000 radio and TV interviews, has been writing as a journalism ombudsman since 2006. He can be reached at Gun-Laws.com where you can read more common sense like you just read.

Scout Scope Mounts for AK, SKS Rifles

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle **O02-25374 \$79.99**

GLOCK's Little Bi

By Gus Cotey

The introduction of GLOCK's G43 in 2015 fulfilled customer demand for this company to produce a very compact single-stack caliber 9mm Parabellum (9x19mm) semiautomatic pistol fulfilling the same tactical niche as the Smith & Wesson Shield M&P9, the Taurus PT 709 Slim, and several other mini 9s currently on the market. This pistol is intelligently thought out and fulfills its specialized niche on a level with the best of its peers.

Like its larger polymer-framed, striker-fired GLOCK brethren, the G43 employs the Browning linkless cam short-recoil operating system of the Browning Hi-Power which utilizes a locking block embedded into the frame with a cross piece that fits into a corresponding cam slot below the chamber area of the barrel. Upon firing, the slide moves backwards from the recoil impulse while the barrel remains integral with the slide and its aft section simultaneously tilts downward as its cam slot tracks along the cross piece of the locking block. The barrel then separates from the slide after a short distance when the chamber pressure diminishes to a safe level. The slide then continues moving backwards as the extractor pulls the spent

Above: Author's G43 with tritium Sevigny Carry Sights made by Warren Tactical.

case from the chamber and continues to moving until the case rim collides with the ejector causing the case to be flung out of the ejection port. The slide then moves forward via the energy stored by the compressed recoil spring and a fresh round is pushed forward from the magazine, up the barrel feed ramp, and into the chamber ready for the next firing.

Each G43 comes with two magazines, one with a flush-fitting standard floorplate and the other with a finger extension. Both have a six-round capacity, giving the pistol a seven-shot (6 + 1) total capacity when topped off. GLOCK does not currently build an extended-capacity magazine for the G43, but several companies make extensions for factory six-shot G43 magazines. Taran Tactical Innovations manufactures some the best of these in +1, +2, and +3 models, with the latter two being supplied with extra-power springs for reliability's sake.

g Gun, The G43⁷⁹

The tritium lamps of the Sevigny Carry Sights are arranged in an easily aligned figure-8 pattern.

The newer configuration of the GLOCK 43 striker (left) contrasts sharply with the older style GLOCK striker (right) in this case from a G26.

The primer of the fired case on the left exhibits the characteristic firing pin indentation surrounded by a raised rectangular area made by GLOCK pistols with conventional strikers. The case on the right was fired from a G43 with the new striker design.

G26 slide (above) compared with G43 slide (below). Note the narrower width of the G43 slide as well as the modified shape of the G43 firing pin safety.

The slimmer barrel of the GLOCK 43 (top) contrasts with the thicker G26 barrel (bottom).

The internal components of the G43 have undergone some significant changes relative to the analogous ones of GLOCK's double stack 9mm models. A few of these differences include a reshaped firing pin safety, replacement of the older leaf-type slide lock spring with a coil spring, replacement of the extended wire spring of the slide stop lever with a coil spring, a smaller connector, a modified trigger mechanism housing, a newly designed dual-type recoil spring and a shorter striker with a modified tip, just to name a few. The new striker is said to prevent piercing soft primers while still providing sound, reliable ignition with all manner of hard ones. The striker indentations on the primers of spent cases fired in the G43 are readily discernable from those fired in double stack GLOCK models.

The G43's magazine catch is of the GLOCK Gen 4 configuration and easily accessible. For left-

handed shooters, it can be switched to the right side of the frame. The operation of the gun is simple in that pressing the trigger disengages the trigger safety, firing pin safety, and drop safety and permits rapid engagement of hostile targets. It works just like the bigger GLOCKS do.

Because of the new components found in the G43, detail disassembly procedures differ somewhat for this pistol as compared to other GLOCK models. While the company frowns on anyone but a GLOCK armorer taking any of their pistols apart beyond field stripping, it is advantageous to know how to detail strip one's firearms because life happens. Guns get muddy, parts break, and it's just good to give extensively fired guns a thorough cleaning now and again. After all, self-sufficiency is a hallmark of gun ownership.

One of the very best lessons on complete disassembly of the G43 (and G42) pistol can be found

Each GLOCK 43 comes with two six-shot magazines; a flush floorplate one (left) and one with a finger extension (middle). The magazine on the right is equipped with Taran Tactical +2 extension.

on YouTube by sooch00 under the title of “Glock 42/43 9mm Complete Pistol Detail Disassembly.” https://www.youtube.com/watch?v=Zw_Z5c1ffj_I The photography is excellent and the instructions are clear and easily understood.

The slide of the G43 has a slimmer thickness measuring 0.8615 inch as compared to the very slightly over 1 inch thickness of GLOCK’s various double-stack 9mm’s, including their subcompact G26. Additionally, my G43’s the barrel mikes at 0.5108 inch in contrast to my G26’s barrel diameter of 0.5702 inch. The G43’s barrel length is 3.39 inches, which is long enough to generate enough velocity with various defense loads to insure respectable terminal performance. Like other GLOCK 9x19mms, the barrel rifling is hexagonal with a right hand twist and twist rate of 1 turn in 9.84 inches. The pistol has an overall length of 6.26 inches and a height of 4.25 inches. The G43 weighs in at a scant 17.95 ounces unloaded.

I found shooting the G43 to be a surprisingly pleasant experience. While the recoil of various 9mm loads, especially the +P and +P+ varieties, is rather snappy, the pistol is surprisingly controllable for rapid repeat shots. Muzzle flip is minimal due to the pistol’s low bore axis, which is a characteristic of all GLOCK pistols. The beavertail-shaped projection at the top of the backstrap prevents the slide from abrading the fleshy web of my hand and the pyramid-shaped projections molded into the front, back, and sides of the polymer frame’s gripping surfaces help to lock the pistol solidly into the firing hand as the piece recoils.

The G43’s inherent accuracy was proved impressive with benchrest five-shot groups at 25 yards often measuring 3 inches or less with 124 grain Speer +P Gold Dot, Winchester 147-gr. Ranger JHP, and Federal 147-gr. HST JHP ammo when I did my part. While I found the factory polymer sights to be useable, I replaced them with Sevigny Carry Sights (named after their designer, world class Grand Master action pistol marksman

Dave Sevigny) made by Warren Tactical and specifically designed for the small G42 and G43 pistols. This sight set features a front sight with a green tritium lamp surrounded by a white outline. The rear sight has a plain single smaller yellow tritium lamp centered just under the notch and makes for an effective figure-8 pattern in dim light. Both lamps are made by Trijicon. Like the standard-size Sevigny sights which I have used for years on my larger GLOCKS, these sights are easy to see in all types of light conditions, extremely strong, and built to a rarely seen level of quality.

For a little pistol, the G43 is relatively easy to shoot, but it must be remembered that little guns are still harder to shoot than full-sized ones. The G43 is tougher to shoot than a standard-size G17, a compact G19, or for that matter, a subcompact G26, so frequently conducted realistic practice for those who carry one is mandatory. If the user carries the pistol with the standard flat base magazine for maximum concealment, then most of his or her range time should be spent firing the weapon with these types of magazines in place. The shooter should get used to the firing hand gripping the frame with only two fingers and the little finger ending up under the magazine floorplate. Training should include presentations from carrying modes that the user actually plans to utilize. Along with two-hand shooting, strong- and weak-hand shooting should be incorporated into practice drills. Training should also include shooting at longer distances (25 yards and beyond) along with the usual shorter ones.

In summary, the G43 is a well-built, well-engineered, ultra-compact carry gun chambered for an adequately powerful cartridge. Because of its diminutive proportions, it can be worn in circumstances and with clothing selections that would cause larger pistols to be left home. Yet this diminutive firearm – when called upon in a dire emergency – is able to strike virtually the same blows as a larger, less-concealable handgun of the same caliber. It is truly a little big gun.

New Designs From Kershaw Knives

Kershaw Knives and **Emerson Knives** have joined forces on a series of knives that combine the precision engineering of Kershaw with Emerson's uncompromising functional design.

The CQC-6K features a modified clip-point blade for versatile cutting ability. The blade has two finishes: a satin finish on the upper and a stonewashed finish on the grind. The handle's front scale of textured G-10 offers a secure grip and the handle's stainless steel back has a solid frame lock.

The CQC-6K is a manual opener using either the thumb disk or the patented Emerson "wave shaped feature." This opening feature enables the knife to be opened as it is removed from the pocket. The pocketclip is reversible for left- or right-handed carry.

Blade length: 3.25" Closed: 4.5" Open: 7.75"

002-31320 \$54.99

Designed by Belarusian custom knifemaker Dmitry Sinkevich, the new **Kershaw Pub** looks like nothing you've ever seen.

Closed, you'd never know there was a handy blade inside – although you would definitely see the equally handy bottle opener. And if you were exceptionally sharp-eyed, you might notice the slotted screwdriver tip right next to the bottle opener.

To reveal the blade, just push down on what looks like the key ring attachment. You'll see the blade move out of the compact handle. Keep pushing and the blade will swing all the way out, ready for use. The blade is a modified sheepfoot with a straight edge and clipped rather than rounded tip. The handle has an anodized aluminum front scale in bright blue and a steel back.

Blade length: 1.6" Closed: 3.1" Open: 4.5"
