**Dillon's
New-
Reloader
XL 650
Package**

See Page 2

er XL 650 Package

You've made the decision that loading your own ammunition is right for you. You're ready to pull the trigger, but uncertain of exactly what you need. Dillon has taken the work out of this. We have assembled a New-Reloader Package, featuring our most popular reloader, the XL650, with the most popular machine options, along with the accessories you'll need to begin reloading immediately. This package is available in 9mm, .223/5.56mm, or BOTH.

9mm 650 Package Includes:

XL 650 in 9mm
 9mm Die Set
 Bench Wrench
 Small Pistol Casefeeder
 650 Strong Mount
 Bullet Tray Kit
 Roller Handle
 9mm Case Gage
 D-Terminator Digital Scale
 Primer Flip Tray
 4 Small Primer Pickup Tubes
 Digital Calipers
The Complete Reloading Manual for the 9mm Luger
Total: \$1331.35

.223/5.56mm 650 Package Includes:

XL 650 in .223/5.56mm
 .223/5.56 Die Set
 Bench Wrench
 Small Rifle Casefeeder
 650 Strong Mount
 Bullet Tray Kit
 Roller Handle
 .223/5.56 Case Gage
 Dillon Case Lube
 D-Terminator Digital Scale
 Primer Flip Tray
 4 Small Primer Pickup Tubes
 Digital Calipers
The Complete Reloading Manual for the .223 Rem.
Total: \$1363.30

Combo Package (.223/5.56 Conversion Pictured at Right) Includes the 9mm Package Above, Plus:

.223/5.56 Conversion Kit
 .223/5.56 Die Set
 XL 650 Quick Change
 .223 Case Gage
 Dillon Case Lube
 Small Rifle Casefeed Plate
The Complete Reloading Manual for the .223 Rem.
Total w/9mm Pkg.: \$1704.50

As a token of our appreciation for new reloaders who purchase one of these packages – while supplies last – we're going to include one of these **Tactical**

Tailor Operator Caps and our Dillon Precision morale patch. The Tactical Tailor cap is an

incredible value: a high-quality product that's made in...wait for it...the USA, by a company that prides itself on hiring veterans. The hat in the photo is MY hat, and I've lost track of how many times it's been washed – IN the washing machine! It STILL looks great! If you're the kind of person who not only wears hats, but also WEARS THEM OUT, you're going to love this hat.

We READ Our Mail!

I guess you get a lot of letters praising your "No BS" guarantee, but I just cannot hold back adding to the chorus. You accepted a decades-old powder measure from my Dillon RL 550 and rebuilt the whole assembly to like-new standards. Plus, from the day I sent it to you, it was back on my doorstep in 10 days and you not only did the rebuild at no charge, but also paid the return postage. I just cannot say "WOW!" loud enough. There is no reason on earth to reload on anything but your equipment. I wish you made cars, appliances, etc.

David J. Prepelka – Moon Township, PA
 Dear Dandy Dillon Dudes & Dudettes, I just wanted to thank you for sending the much-needed parts to get my beloved Dillon 650 Precious Metal Production Plant back to spitting out beautiful, shiny and highly noisy 9mm ammo! Your customer service rep was gracious enough not to chide me for "forcing" the primer feed mechanism in order to "un-jam" a less than fun situation. Not only did he send me the parts needed, but he also sent me two of the more commonly bent parts. (How did he know I'm a slow learner?) Many of my friends have already purchased 650s on my recommendation, and I will continue to heartily recommend your products and emphasize your No BS warranty.

Aaron Zambrana – Lincoln, CA
 I have three of your presses and recently had occasion to return one to you for service. The response you gave was quick and the press works like new. Just wanted to let you know how impressed I've always been with your work and attention to your customers.

Norman R. Auger – East Bloomfield, NY
 Not only does Dillon make the best progressive reloading press that one can buy, you product support/customer service is the best I've ever experienced. I have been reloading since 1967 and bought my Dillon 550B in 1995. I have reloaded well over 1,000,000 rounds on it. Most of the primer assembly finally needed to be replaced. It didn't break; it finally wore out. I called on February 19 to order the needed parts, they were shipped on February 20, and I received them on February 22. My 550B is up and running like new. What's more, there was no cost. Please extend my gratitude to the good folks in Customer Service.

Don Guetig – Colorado Springs, CO

 Products, Inc.

All the electrical and/or electronic components of Dillon equipment and all Dillon textiles are covered by a one-year warranty from date of purchase. Any modifications performed to Dillon machines, or the addition of any unapproved equipment, including automated or mechanical add-ons from other manufacturers, is expressly not recommended and will void the Dillon warranty.

We offer a smartphone app for both Apple and Android. Search for "Dillon Precision" at the iPhone App Store or Google play.

ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls for each ear
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

RETURN OF THE MODEL 1892

SKINNER SIGHTS .44 MAGNUM/.44 SPECIAL "BUSH PILOT" CARBINE SURVIVAL KIT

Reviewed by Peter Caroline

The lever-action carbine is a quintessentially American icon. Right out of the box, it is ready to load and use. Unlike the Modern Sporting Rifle, there is little necessity for the owner to add extra frills...what you see is what you got, and what you got is more than up to the task. Over the years, I've owned a variety of lever actions, in .22 LR and .22 WRM, .32-20, .30-30, .30-40 Krag, .30-06, .44 Magnum, .45-70 and .50-95 Winchester. Regardless of caliber or age, they've all been quite dependable and fun to shoot.

Recently, it occurred to me that my accumulation of firearms had finally reached critical mass. My 300 sq. ft. gunroom, replete with rifle racks, handgun pegboards and a small reloading area, was full-to-bursting. I resolved to stop adding to my collection. And all was going well...until I encountered a resolution killer. I received an invitation from Rob Leahy, of Simply Rugged Holster fame, to attend a writers' event at Gun-site Academy, sponsored by Simply Rugged, Ruger, Republic Forge, Tyler Gunworks, Lipsey's, DoubleTap Ammo and Skinner Sights. We were encouraged to try out all this lovely merchandise, and I did. I was successfully avoiding temptation...until the last day, when I test-fired a neat

little .44 Magnum/.44 Special lever-action take-down carbine from Skinner Sights. Six rounds off-hand, and my resolution went straight to hell...I HAD to have this gun!

Actually, it's more than just a gun; it's part of a whole kit. The gun itself is a Winchester Model 1892 clone, built to Skinner specs in Italy by Chiappa. It's available in your choice of .44 or .357 Magnum. It has a 16-1/2" octagonal barrel with 1 in 20 twist for heavy bullets, 8+1 capacity and 13" length of pull. Buttstock and forend are walnut, and the steel buttplate is curved like the classic original. Metal parts are stainless with a hard chrome finish. It weighs about 6-1/4 lbs., and the metal-to-metal and wood-to-metal fit appears to be tighter than the original New Haven products. But wait, there's more...included with the carbine is an Ontario Knife Co. RAT-7 hunting knife with a 7" blade, with "Bush Pilot" logo, serially numbered to the carbine. The emergency kit includes a DOAN magnesium MilSpec fire starter, 50' of USA-made MilSpec 750 para cord, Titan stormproof flare matches in a waterproof container, a Brunton USA Tru-Arc compass and a space blanket tube tent big enough for two. The carbine fits handily into a 22" long 1000-denier Cordura take-down case, which even has a pouch on the out-

Above, the Bush Pilot receiver with engraved logo. Top Right, the fiber optic front sight. Bottom Right, the Skinner Sights aperture rear sight.

side for a 50-round box of ammo. It's everything I'd need, minus the C-rats, if my non-existent Piper J-3 were ever forced down in the wilderness.

At the "range" (actually, a small cleared area out in the boonies), the Bush Pilot behaved very well. The recoil, even with .44 Magnums, was not at all bothersome. With Cowboy .44 Specials, the "kick" was about as noticeable as that of a .22 LR. Trigger pull was consistent at 3-1/2 lbs. The rear sight is adjustable (1/16" Allen wrench required) for both elevation and windage. Initially, with the supplied rear sight aperture, my well-aged eyes found it difficult to line up a target behind the red fiber optic front sight. I removed the aperture, giv-

ing me a "ghost ring" sight with a much larger field of view, which made snap shooting far easier and more instinctive.

This neat little carbine is ideal for pigs, javelinas, coyotes, home defense and general enjoyment. It's available, in .44 Magnum/Special or .357 Magnum/.38 Special, exclusively from Skinner Sights (email andy@skannersights.com). MSRP for the whole carbine kit is \$1799, but the Introductory Price is \$1499. Great fun!

RL 450 Powder Die:

P26-20308, \$23.95

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form - Dillon's BL (Basic Loader) 550 - adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers - just like the RL 550 - it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader!

The interchangeable toolhead (Page 15) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$26.95 each, or \$24.95 each if you buy three or more - if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (bottom right photo) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy - you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

One-Inch Bench Wrench	P26-10842	8.95
Square-Deal-Only Wrench	P26-19970	9.95

Dillon's Strong Mounts

increase your machine's "foot-print" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 650	P26-22051	\$52.45
XL 650-only	P26-22052	49.45
"SDB"	P26-22223	68.45

Dillon's "Belted Magnum" Powder System[^]

System[^] features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	P26-97126	\$158.95
----------------------	------------------	-----------------

Dillon's Roller Handle[^]

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Aluminum Roller Handle	P26-17950	\$48.95
------------------------	------------------	----------------

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	P26-22214	\$45.95
1050 Tray Kit	P26-22215	45.95

Dillon's Low Powder Sensor[^]

Sensor[^] provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	P26-16306	\$43.95

Dillon's Case Preparation Equipment

CV-2001[^] P26-20493 \$191.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

CV-750[^] P26-19455 \$146.95

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To

CM-2000 Case/Media Separator[^] P26-20675 \$78.95

CM-500 Case/Media Separator[^] P26-21045 \$47.95

accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers: Case Cleaners are available in 220 volt!

Euro CV-2001 P26-22047 \$216.95

Euro CV-750 P26-19473 \$171.95

Rapid Polish[^]

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run.

Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle.	P26-13804	\$8.95
Case (20 pc.)	P26-20255	135.95

Case Lube[^]

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

22 Dillon's RF 100 Automatic Primer Filler

Eliminates the need for primer pick-up tubes!
Fills the primer tube while you reload!
Clear polycarbonate shield and protective housing

Dillon's RF 100 Automatic Primer Filler[^] eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$52.95 each.

Super 1050/RL 1050 Short Trim Die Toolhead[^]

P26-62219
\$230.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. **(NOTE: the Blue 1050 toolhead stand – Part Number P26-62200, \$49.95 – is not included.)**

Rapid Trim 1500 Case Trimmer[^] 23

Dillon's RT 1500 shown installed on an XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a

quick-disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **P26-62164** is **\$337.95**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **P26-13141**, are **\$20.95** each. Upper lock rings, **P26-13559**, are **\$5.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600[^]

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Dillon's Concealed Carry Tote[^]

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for

quick access, has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

Mernickle's "Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

“Plan B”[▲]

Very-Bad-Day Planner Holster

Dillon’s “Plan B” Very-Bad-Day Planner Holster[▲] holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won’t draw undue attention. It looks like a typical day planner, but inside there’s a holster that’s adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels. “Plan B” Holster **P26-10252 \$24.95**

Range Bag[^]

Dillon's Range Bag is designed to hold the Border Shift Ammo Bag (sold separately below), as well as a Dillon Large Utility Box (see Page 64). The Main Compartment is 12.5" long x 7" wide x 10" high, the End

Pockets are 8.5" tall x 6.5" wide x 2" deep and the Front Pocket is 9" tall x 6" wide x 2" deep.

Range Bag, Black	P26-19366	\$89.95
Pistol Pouch, Black [^]	P26-17027	10.95

'Border Shift' Ammo Bag[^]

Dillon's two-compartment ammo bag is constructed with a flexible inner liner that will allow the entire volume to be accessible from either zippered opening. You'll never again mix fired brass with loaded rounds!

I.D. Card Holder
P26-14575 \$2.95

Black Ammo Bag	P26-13755	\$25.95
-----------------------	------------------	----------------

Dillon's Shooting Mat[^]

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles. *Dimensions: 66" x 27.75"*

P26-18146	\$65.00

Mr. Bulletfeeder[®]

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Mr. Bulletfeeder (Comes Set Up in One Caliber)

Mr. Bulletfeeder[®] Replacement Parts & Spares

Having separate Bullet Dropper Dies allows you to quickly swap toolheads of the same caliber sizes without having to remove and readjust the bullet dropper die.

The Output Tube Assembly is what connects the Mr. Bulletfeeder by DAA's collator to the dropper. It feeds the bullets into the dropper, keeping them aligned and feeding smoothly. The Small Output Tube Assembly is required for the rifle calibers (both .223 and .308) as well as when loading very short, light 9mm bullets, such as many of the 90-grain bullets available. The Large Output Tube Assembly is required when loading 9mm (over 115-grain bullets), .40, or 45.

Lose a spacer? This four-pack of Nose Guide Spacers is identical to what comes with the Mr. Bulletfeeder. These are used to adjust the height of bullets, so they don't spill out or flip upside-down.

Dillon's Pistol Die Sets

Size Die

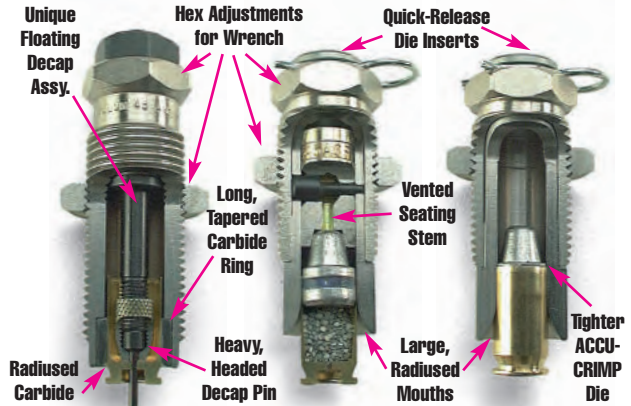

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the tool-head and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a head-space case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Dillon Rifle Dies (Three-Die Sets)[^]

.223 Remington	P26-10839	\$80.95

The Swiss K31, the

By Gus Cotey

One of the things that the Swiss are known for is world-class precision manufacturing. I was once told the story of a Swiss manufacturer's rep being presented by a rep from another country with a small box containing a sample section of wire so small in diameter that it was practically invisible. The Swiss rep was told, "Let's see if you Swiss can compete with this level of precision." Shortly thereafter, the foreign rep received a package containing the same section of wire along with a note from the Swiss rep stating that he should examine it closely to see the modification his company made to it. Upon microscopic examination, as the story goes, the wire was found to have a tiny hole precisely drilled in it.

Whether or not this story is true, it illustrates a matter of fact. When it comes to crafting anything from music boxes, to cuckoo clocks, to machine tools, to measuring instruments, to firearms, the Swiss truly have their act together.

Another thing that the Swiss are known for is their preparedness for the defense of their country. In Switzerland, compulsory military service for males has been a tradition as has keeping issued service rifles at home. Marksmanship, as well as other elements of civil defense preparation, was and still is held at a high premium. For this reason, Switzerland has avoided being invaded for over two centuries.

The last manually operated Swiss military rifle was the Karabiner Model 1931 (K31) straight-pull bolt action carbine chambered in caliber 7.5x55mm Swiss. This firearm, which entered service in 1933, replaced the earlier Model 1911 straight-pull rifle and K11 carbine also of the same caliber. It was replaced for frontline service in 1957 by the selective fire Sturmgewehr 57 in the same caliber. The K31 is often erroneously referred to as a "Schmidt-Rubin," but Colonel Rudolf Schmidt, who designed earlier Swiss straight-pull military rifles, died in 1898, well before the development of the weapon. The K31 was designed and developed at the Eidgenössische Waffenfabrik in Bern, Switzerland under the leadership of Colonel Adolf Furrer.

Lt. Col Eduard Rubin designed the 7.5x55mm round used in the earlier Swiss M1896/11 rifle,

M1911 rifle, and K11 carbine, as well as the K31 carbine. The 7.5x55mm Swiss GI Ball loading features an exceptionally aerodynamic 174 gr. boat tail spitzer bullet and is designated as the Gewehrpatrone (German for "rifle cartridge") 1911 or GP 11. The load has a muzzle velocity of 2,559 fps out of the K31's 25.67-inch barrel. The long-range performance of the 7.5x55mm cartridge impressed the US Army's Ordnance Department so much that it served as the basis for the development of the 173 gr. M1 loading of the .30/06, which replaced the 150 gr. 1906 loading, which in turn was replaced by the 152 gr. M2 loading. The GP11 round has maximum range rated at 5,500 yards when fired from the K31.

Surplus Swiss G.I. 7.5x55mm ammo comes in 60-round waterproof packs containing 6 10-round boxes. Their contents are designated in German, French, and Italian which are the three main languages spoken in the various Swiss cantons (territorial districts). Swiss surplus ammo is Berdan primed, thereby complicating reloading. Fortunately, Boxer-primed brass and loaded ammo is available from Privi Partizan and Norma. This coupled with the fact that the 7.5x55mm Swiss cartridge can be loaded with a vast array of .30 caliber (0.308 inch) bullets makes handloading large amounts of ammunition in this caliber a practical enterprise.

The K31 weighs 8.85 pounds unloaded, has an overall length of 43.6 inches, and a barrel length of 25.67 inches. The bore features 4-groove right-hand twist rifling, a nominal groove diameter of 0.307 inch, and a twist rate of 1 turn in 10.63 inches. Earlier K31 carbines have oil-finished European walnut stocks, but later made ones have shellac-coated beech stocks.

The K31 straight-pull carbine employs a bolt with a spiral cam slot machined into the exterior surface of the bolt body, which is equipped with two forward locking lugs. A separate bolt cylinder fits into the front of the bolt body and retained therein via two rear lugs. This cylinder has the bolt face counterbored into its front and contains the rifle's leaf spring-type extractor within a milled slot machined into its outer diameter. The firing pin resides in a slot machined into the forward end cocking piece and is retained via tension from the

The Finest Military Rifle to Never See Action

K31 bolt components (top to bottom): bolt handle, bolt cap, bolt cylinder with extractor installed, bolt body (note spiral cam slot), cocking piece, mainspring and firing pin.

Swiss Coat of Arms embossed on K31 receiver.

Top view of K31 front sight residing in its angled dovetail.

mainspring. The bolt handle is equipped with a perpendicular projection which fits into the cam slot which causes the bolt body to rotate (but not the bolt cylinder) counterclockwise, thus unlocking it as the bolt handle is pulled back and clockwise as it is pushed forward, locking the bolt into battery. A bolt cap at the rear of the bolt holds the entire assembly together.

The K31 feeds from a detachable 6-round, staggered-column box magazine. Each rifle is issued with one magazine (serialized to that particular weapon) and in combat loading takes place from the top of the receiver by means of a resin-infused cardboard stripper clip with tin-plated sheet metal lips. For range use or hunting, the magazine can also be loaded with loose cartridges. When the magazine is empty, the bolt cannot be pushed forward unless the follower is pressed down. This feature is intended to remind the soldier his weapon is empty.

To put the weapon on safe, the shooter inserts his forefinger into the looped end of the cocking piece, pulls it back until its integral cocking tab clears its slot at the 6 O'clock "FIRE" position and rotates it to the slot at the 9 O'clock "SAFE" posi-

tion and gently lowers the tab therein. This also locks the bolt in place.

The K31 is equipped with a tangent rear sight calibrated from 100 to 1,500 meters in 100-meter increments. Horizontal impact adjustment is done by moving the front sight. The rear sight is set up for a center hold at the 100 and 200-meter settings. At the 300-meter setting and up, it is set up for a 6 O'clock hold on a humanoid torso target.

Unlike the front sight dovetails of most military surplus military rifles, which are perpendicular to the bore, the dovetail of the K31 front sight is cut on an angle relative to the bore axis. Moving the front sight forward towards the muzzle also moves it to the right which moves the point of impact to the left, and moving the front sight to the rear has the opposite effect. Such adjustment would be performed by an armorer using a special tool, which applies pressure to the sight by means of a screw.

The K31's ejector is of the receiver-mounted stationary post type and is mounted at 6 O'clock and in line with the firing pin. Because of this, spent cases are ejected upward making conventional

Model 1918 Schmidt bayonet and scabbard.

K31 muzzle cap for protection of the muzzle crown and front sight, as well as prevention of bore obstructions during rough maneuvers on snow-covered, mountainous terrain. Note Swiss Cross embossed on side.

Ten-round box of 7.5x55mm Swiss GP 11 Ball cartridges with German, French, and Italian labeling reflecting the three main languages spoken in various Swiss cantons. Also shown is a loaded Swiss resin-infused, 6-round stripper clip used for loading K31 magazines.

7.5x55mm Swiss GP 11 Ball cartridge shown with a 174-grain boat tail spitzer GP 11 bullet.

ID tag recovered from under author's K31's buttplate has the soldier's name and address written on it.

scope mounting problematical. The Swiss tackled this technical challenge in their sniper's versions of the K31, the ZFKar. 31/42 (Zielfernrohr-Karabiner) and ZFKar. 31/43, by mounting a very compact low power (1.8x and 2.8x respectively) scope on the left side of the receiver. In 1955, the Swiss army adopted a completely redesigned sniper rifle based on the K31 design, (the ZFKar. 31/55) but with the receiver canted to the right, which permitted mounting a more conventional 3.5x scope on the top of the receiver.

My personal walnut-stocked K31, which was built in 1941, shows signs of honest use, but exhibits less wood damage than some specimens that have been used to hammer in tent pegs or have had their stocks scuffed up by the spikes of mountaineering crampons Swiss troops have mounted on their combat boots under appropriate conditions. The citizen-soldier who once carried and trained with this weapon took better than average care of it. Like many K31s, a card with its former user's name, address, birth date, and service number was placed under its buttplate.

K31 carbines are characteristically quite accurate and exhibit uncommonly fine workmanship for standard-issue service arms. Their triggers have considerable slack for safety sake under stressful conditions, but have excellent, crisp let-offs that would benefit properly tuned military match rifles. The trigger on my specimen breaks at a consistent 3.5 pounds. The precision construction of the K31 coupled with the match grade inherent accuracy of Swiss standard issue GP11 ball ammo allows a good shot from a rest to frequently turn out 5-shot groups of 2 inches or less at 100 yards under favorable conditions. The Swiss standard military qualifi-

cation range was and still is 300 meters (328 yards) and the K31 is certainly able to allow a competent marksman to do justice to his best efforts.

The K31's issue M1918 bayonet is a very well crafted edged weapon of formidable elegance. It features an 11-3/4-inch double-edged blade with a reverse fuller or midrib on each side of the blade and a reinforced area or bolster at the point. My particular specimen is stamped "ELSENER" which is the family surname of the manufacturer which would later be known as Victorinox, the world famous maker of Swiss Army knives, among other types of cutlery and assorted products. Stamped below the maker's name is "SCHWYZ," the name of the Swiss canton where the maker is located.

Along with the bayonet and cleaning equipment, each K31 was issued with a muzzle cap to prevent bore obstructions and protect the front sight during rough maneuvers. This well designed piece of kit fastens securely to the weapon's protective front sight "ears" via spring tension, yet is easily and quickly removable when the weapon needs to be put into action.

When handling military surplus firearms, one generally wonders about the campaigns they went through and the trials and tribulations faced by their users, as well as their deeds both heroic and/or villainous. This is not, however, true in the case of the K31. The vast majority of these weapons were virtually exclusively militarily used by neutral Switzerland, with another 100 going to the Vatican's Pontifical Swiss Guards in 1955. The well-engineered, precisely built, straight-shooting, and hard-hitting K31 was never to any significant extent fired in anger. It stands as the finest military rifle to never see action.

Gun Laws We Need All

By Alan Korwin

The democrats are on the march. Because they now run the U.S. House of Representatives, they figure they can draft and introduce anything, and they are. They took an entire congressional day to preach, proselytize and promote (they no longer debate) H.R. 8, a gun-registration scheme disguised as some sort of so-called “background checks.”

We already have background checks, which we were promised would basically end gun-related crime. H.R. 8 does nothing about armed criminals. The checks are expensive, consume crime-fighting resources, and have become an entire employment branch of the FBI and BATFE. According to Department of Justice studies, massive inner-city murder counts, domestic-violence hostilities and murderous sociopathic outbursts in the news (with endless saturation “coverage”) are unaffected by the existing or newly proposed checks.

All the focus on this is being prompted by, and done in hopes to forestall homicidal children from slaughtering their classmates, and to stop spree killers and jihadis from randomly creating massacres. If only the “news” media would point out that this and related bills are not remotely related to fixing those problems. Stopping mass murderers, and implementing new record checking are unconnected phenomena.

H.R. 8 says gun registration is banned, but people in the know understand that’s just window dressing, designed to provide plausible deniability. That clause can be removed with ease at any later date. The important thing for the left is to get H.R. 8 passed, by the one House they control. Control. In the future, the near future, they can massage, change, amend, completely rewrite and reintroduce amending amendments, and make registration the core of the program. **They** know it, **I** know it, and now **you** know it. The Department of Jus-

tice said the obvious, the scheme can’t work without registration: without knowing where everyone’s guns are, *private transfers* (the new wrinkle) can’t be controlled. That’s why the left just considers this a good first step. Everyone who understands is aware of that.

Control of privately transferred firearms, the actual goal of this bill, doesn’t work unless the government knows who has what guns. Without that information, there’s no way to tell if you or anyone transferred a gun to anyone. To know if you own the guns you always had, and still have all the guns you used to have, the government needs a list. All of the time, effort and money of H.R. 8 goes into tracking YOU, not stopping crime. Remember, gun control is about control. It is not crime control. Crime control would look like increased budget and facilities for arresting, trying and incarcerating some of the 6,000 murderers annually who walk free. The left actually detests dealing with crime control for a difficult reason. The results of crime control are not demographically diverse. This defeats a tenet of leftist ideology.

Gun registration is a required piece of the new so-called background-check scheme; it’s meaningless without it. That’s why it meets such stiff opposition, because it’s evil incarnate, not due to one wonderful lobby or another, rightfully positioned, struggling uphill and fighting the good fight. The lobbies like NRA, GOA, SAF, JPFO and the rest are there because the left-wing gun-rights-denial plans are so bad.

America needs a law to guarantee that registration – the prerequisite for gun confiscations – cannot happen. The Constitution itself is no longer enough. That in itself is astounding. Too many politicians no longer have honor, and violate the Big C without remorse. We the people must hold them accountable, and contained, with legitimate threats of jail time. Here’s how it’s done.

“Control of privately transferred firearms... doesn’t work unless the government knows who has what guns.... Gun registration is a required piece of the new so-called background-check scheme; it’s meaningless without it.”

Are No Longer Options

Registration is infringement. Infringement is banned. Why? Well it's easy to see that the right of the people to keep and bear arms shall not be infringed, that's in the Constitution itself, that language is plain. What's missing is punishment.

Gun and gun-owner registration puts brakes on what you can and cannot freely do – like handing a gun to your buddy, or buying a gun from your friend. Those freedoms you currently enjoy are interfered with – infringed – by the registration and background-check schemes democrats are pushing in both H.R. 8, H.R. 1112, previous proposals, and bills floating now through state legislatures.

Anyone who would infringe your right to property you already own should face (a court martial, ethics inquiry, censure, expulsion, impeachment, fines, ridicule, ostracism, penalties, jail time, etc.). Due process and a ban on cruel and unusual punishment helps guide your choices.

Such a bill would actually provide protection for proper law enforcement officers who might be pressed into service to enforce unconstitutional infringement dictates now being cooked up by the socialist party disguised as democrats. Officers could legally refuse to act in any way that infringes on a citizen's right to keep and bear arms, which people already keep and bear. Because the officers would be subject to penalties for violating citizens' rights to arms, they (the officers) would have grounds for refusing to obey such orders – it would make police criminals to do so.

Alan Korwin's website features plain-English books on state and federal gun laws for the public, and more common sense like you just read. He invites you to write to him or see his work, at GunLaws.com, where you can get books and DVDs that help keep you safe.

The Original M1 Buddy®

The Original M1 Buddy Service Rifle Cleaning Port fits all models of M1 Garand and M1A rifles. Unlike other service rifle cleaning ports on the market today, the M1 Buddy allows you to use either the ratcheting GI Chamber Brush or GI Combo Tool while the cleaning port is in place! No need to worry about those fingers anymore! The Original M1 Buddy is covered by a lifetime warranty and will be replaced free of charge if it fails under normal use.

The Original M1 Buddy

P26-13447 \$12.95

The Original Carbine Buddy Cleaning Port

enables you to clean your M1 Carbine chamber without worrying about pinching your fingers. The Original Carbine Buddy is covered by a lifetime warranty and will be replaced free of charge if it fails under normal use.

The Original Carbine Buddy

CLASSIC FIREARMS: US WWI Warner

At right is a close-up of the M1913 sight installed on an M1903 rifle.

By John Marshall

During World War I, over 100 years ago, a number of our “doughboys” were equipped with scoped sniper rifles and put them to good use on the battlefields in France. The unusual scopes that were most often employed were quite sophisticated for that time. These scopes were offset to allow clip loading of the rifles and were equipped with prisms, precision adjustment dials and built-in range-estimation stadia marks. Compared to today’s scopes they were primitive, but they got the job done well enough to account for quite a number of enemy casualties in “the Great War.” This is the story of those interesting scopes that turned our Model 1903 rifles into long-range terrors.

It all began with a single paragraph in the U.S. Small Arms Firing Regulations of 1904, which authorized the use of telescopic sight-equipped rifles for use by selected enlisted men who had qualified as expert riflemen. There was only one problem – as of 1906 no such sights had yet been designated for our newly adopted caliber .30-06 Model 1903 rifles!

The Ordnance Department of the U.S. Army tested several scope designs and finally decided on an experimental scope that had been devised by the Warner & Swasey Company, located in Cleveland, Ohio. This company had previously provided artillery fire control equipment and other optical instruments to the U.S. government. Twenty-five of those scopes were purchased in 1906 and were then attached to M1903 rifles and tested. This scope was an offset prismatic device that provided 6X magnification. It was secured to the rifle with a dovetail base that was fastened along the left of the receiver. This location allowed the use of stripper clips for loading and the optional use of the regular iron sights for zero confirmation and up-close use. Aside from attaching the dove-

tail base and removing a small amount of wood on the left side of the stock, the rifles were otherwise standard issue. Because the scope was offset to the left of the bore line, a rather unstable cheek position resulted when aiming and firing. Also, with the eye relief of this scope being quite short, a supple green-tinted rubber cup over the rear lens had to be used to protect the shooter from eye damage and properly line up the scope with the eye. Interestingly, the initial cost of the scope was about double the cost of the rifle, and caused some official complaints. Accordingly, the design was modified to bring the cost down to a more reasonable amount. The W&S scope was then officially adopted for service as the “Telescopic Musket Sight, Model of 1908.” It was made of steel and brass, painted black, and was fairly heavy at 2-1/4 pounds. W&S information and a serial number were stamped on the left side of each scope. Small brass plates were fastened on top of each scope that gave compensation data for range, windage and bullet spin drift. The sight had a crosshair reticle and had three stadia lines on the left side for estimating distance, framing a standing man to make the estimate. Two adjustment wheels were located on the left side of the scope – the larger one for elevation and the smaller one for windage. One thousand M1908 scopes were purchased in 1909, 10 in 1910 and 1,065 in 1912.

When a scope was fitted to a rifle, the serial number of the rifle was stamped inside the dovetail mount on the scope. While the rifle/scope pairing was supposed to be kept intact as a unit, it was inevitable that mismatches occurred as they were employed in the field. The sights had leather carrying cases made by Rock Island Arsenal.

Aside from the problems with an awkward shooting position and the short eye relief, the prismatic setup allowed debris such as flakes of black

W&S-Scoped M1903 Rifles

internal paint to be magnified six times in the shooter's view. Complaints resulted in a redesigned sight designated as the "Telescopic Musket Sight, Model of 1913." The power was reduced from 6X to 5.2X, which improved light-gathering ability and gave a wider field of view. The outside of the scope was slightly changed as were the elevation dial and its locking nut. The attachment method was the same.

The Model 1913 sight became the standard Army telescope at the time of our entry into World War I. Both a modest number of Model 1908 sights and more of the prevalent 1913 sights were used during the war, all assembled to rifles by Springfield Armory. Quite a few W&S-equipped rifles were employed on the battlefields in France. Official regulations called for 96 of them per division. The sights certainly gave our doughboys a needed leg up in sniping over conventional iron sights. There were field modifications, of course. Sometimes the eyecups were shortened or removed entirely, and screws were often added to the mounts to make them more secure. Regularly seen in the field were both standard M1903 and W&S/M1903 sniper rifles "pattern painted" to help in camouflaging the rifles.

According to Ordnance Department records, about 4,000 M1913 sights were purchased until the Armistice on November 11, 1918. Most of them were not actually installed on rifles, and these were sold as surplus after the war. The last shipments from W&S to the government were

made in December 1919. Those scopes found today without rifle serial numbers in the scope rail were obviously never actually fitted to a rifle. The scope serial numbers on their left sides bear no relationship to any particular rifle.

These W&S/M1903 sniper rifles were used through the end of WWI, but most were removed from service a few years later. They were the only U.S. sniper rifles used in major quantities during the war. A few rifles equipped with long Winchester A5 and 5A scopes were used primarily by the U.S. Marine Corps. Most of these commercial scopes had been previously fitted to rifles by USMC armorers for rifle team competition. They were used only sparingly during the war.

For a very interesting first-hand account of sniping during WWI, I recommend the book *A Rifleman Went to War* by H.W. McBride. He was a pioneer in the art of sniping, and viewing the war through his eyes is quite educational. His book, first printed in 1935, is mandatory reading for U.S. Marine snipers today.

Today, an original serial-matched Model 1903/W&S-scoped rifle is an incredibly valuable collector piece. Rifles and unmatched surplus scopes that were united after the war do exist. They are certainly interesting as representative of the combination, but they do not bring the higher prices of matched examples. These are classic firearms about which little is generally known, but which played an important role in the winning of World War I.

Lyman Precision Funnel Set

Lyman's Precision Funnel Set is the ideal system for the serious reloader. The Precision Funnel Set is made to be completely static free, with a body of die-cast aluminum and precision-turned aluminum inserts. No more powder clinging to surfaces, which can happen with lightweight plastic funnels. The solid construction and quality of Lyman's Precision Funnel Set will be apparent in its first use. This is no "one size fits all" funnel; the Precision Funnel Set uses precision-machined, caliber-specific inserts to properly fit the case neck. The inserts can be quickly and easily installed by simply pushing them into place and then pulling them out when changing calibers. The Precision Funnel Set also comes with a padded storage case that neatly stores extra inserts when not in use. The set includes inserts for .22, .243/6mm, .25/6.5mm, .270/7mm, .30 and .338 caliber rifle cartridges.

P26-11389 \$39.95

Lyman X-Block Gunsmith Bench Block

Having the right tool for the job makes any gunsmithing project so much easier! Without the right tool, you may damage fine finishes or break parts. The Lyman X-Block is the right tool for anyone driving pins out of firearms. It has all the features to get the job done smoothly and professionally. The X-Block has both a "V" slot and a rounded slot running across the face of the block to support a variety of barrels and slides. The block is made of a tough, non-marring polymer, and edged with a softer non-slip outer overmold. The block has multiple holes to take on most any project, as well as a molded-in magnet on the back side of the block to catch pins and other small parts as they drop out. Its large 5" diameter provides a stable base with plenty of support.

Reloading 1949 vs. 2019: Your

By Gary Kieft, Dillon Sales Manager

When attending a recent sportsman's show, I spoke with a lot of reloaders who still question some of the basic tenants of modern reloading.

Most notably, that you can only load accurate rifle ammunition on a single-stage loader, and that primer pockets must be cleaned. Most of these reloaders were taught by a parent or grandparent. While improvements in technology are taken for granted in most aspects of our shooting, in the realm of reloading, tradition has proven to be a formidable barrier to updating reloading practices. What exactly has changed? Why should reloaders update their practices? A comparison is probably in order.

In 1949, the dominant reloading tool was a single-stage press. The handheld reloading tools, such as the Ideal tong tool, products of 19th century design, were waning in popularity. Dies had a variety of thread patterns, standardization was yet to come. The one or two progressive loaders were very expensive, and very limited in availability and in caliber selection. The high-volume ammunition consumers of the era were varmint hunters. The few turret machines available allowed them to keep the dies adjusted,

yet did little to actually increase output over the single stage.

For rifle reloading, extruded powders were virtually the only game in town. Extruded powder

granules look like broken pieces of pencil lead. The powder measures of the era were not optimum for metering this type of powder accurately. Weighing the powder charges individually was the best way to maintain accuracy. Ball powder was developed during WW2, but only one, a surplus .303 British powder, was being sold by an enterprising gentleman named Bruce Hodgdon. The *Ideal Handbook #40*, published in 1955, does not have any load data for this BL (C) powder.

Non-corrosive primers were in use, but only in commercial ammunition. Winchester and Remington both introduced versions of non-corrosive primers beginning in the late 1920s, while military ammunition had only begun this transformation in 1950. During

WW2, some .30 M1 Carbine ammunition was loaded with non-corrosive primers. For all other calibers, the transition to non-corrosive primers began in the early 1950s, and was completed in the early 1960s. Military match .30-06 ammuni-

Herter's Single-Stage Reloading Press

Grandfather Would Be Amazed!

49

tion was the last to be loaded with corrosive primers. The use of corrosive primers requires that the primer pockets be cleaned before reuse, to prevent spraying residual corrosive salts to the bore again and again.

By 2019, most reloading equipment manufacturers offer progressive reloading equipment. With progressive loaders, the machine has positions for all of the dies needed to reload a cartridge, as well as a powder measure to charge the case during the loading process. Instead of only holding a single case, it holds the same number of cases as it has positions. The result is that by performing the various sequential steps to multiple cases at the same time, the result is every cycle of the handle produces one loaded cartridge. You no longer have to handle each case five or six times to complete the loading process. This results in the hobbyist producing hundreds of rounds in an hour, compared to 40-50 rounds on a single-stage press.

Ball powders are predominant for loading rifle ammunition. Additionally, new extruded powders

have been formulated that allow the granules to be much shorter. Both of these propellant improvements allow powder to be metered more precisely. Improvements in manufacturing meth-

ods allow parts to be made to tighter tolerances. Dies, powder measures, and machines are superior in every way.

Priming compounds are even cleaner than before. Current priming compounds, in addition to being non-corrosive, don't leave enough residue to interfere with either primer seating or powder ignition. Even foreign-manufactured ammunition is primed with non-corrosive primers.

Cleaning primer pockets is a waste of time and effort.

We study history because it's important to know where we came from, in order to appreciate where we are now.

This applies to a lot of things, including reloading. After 70 years, our grandfathers would indeed be amazed at the developments to make reloading easier and better.

Dillon's RL 550 Progressive Reloader

50 "Big Fifty Reloader" [^]

STANDARD FEATURES:

- Made in the USA
- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2" -12 UNF Thread Dies
- Manual Shellplate indexing
- Average Loading Rate: 300 Rds./Hr.
- Loads High Volume/Match-Grade Ammo
- Milspec/Match-Grade Priming System
- Ductile Iron/Carbon Steel Construction

Dillon's Bench Wrench Fits 1" Die Lock Rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We offer 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our 1" wrench is a 7/16" box-end for adjusting the

Powder Bar of any Dillon Powder Measure. All of our die lock rings fit any standard 7/8" x 14 dies.

Comtech's STINGER

THE STINGER: Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger!

P26-19495 \$9.95

Elzetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

P26-21894 \$46.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

P26-19972 \$39.95

Berry's Manufacturing Pan Sifter

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Ammo Background Checks

By Larry Drake, Dillon Social Media Manager

Background checks for ammunition purchases are coming to California on July 1, 2019. This is courtesy of a law that went into effect in November of 2016. The new regulations governing firearms cover a variety of areas, such as a ban on “high capacity” magazines, with background checks for ammunition purchases being next. Similar registration efforts have previously been enacted in Los Angeles with what some would describe as success. Los Angeles area shops have to register ammunition purchases and log the identity of the purchaser. These logs have actually been used to catch criminals who – surprise – were not allowed to own guns. By comparing the prohibited possessors with the ammo purchasers the authorities were able to establish probable cause and take down some bad guys. The perceived success of this program in Los Angeles led to a call for expanding the program and taking it to a statewide level. What does this mean to California shooters who just want to buy some ammo for a weekend trip to the range? Well, you’ll have to pay \$1 to the state of California for a background check to determine whether or not you are allowed to purchase ammunition. The check is supposed to be quick; there is no waiting period. If the check comes back clear you are all set, but if it doesn’t, no ammo for you. The new, statewide, background checks will reference an online database known as the “Prohibited Armed Persons File” which is described in the following section from the California Penal Code:

§ 30000. Prohibited Armed Persons File

(a) The Attorney General shall establish and maintain an online database to be known as the Prohibited Armed Persons File. The purpose of the file is to cross-reference persons who have ownership or possession of a firearm on or after January 1, 1996, as indicated by a record in the Consolidated Firearms Information System,

and who, subsequent to the date of that ownership or possession of a firearm, fall within a class of persons who are prohibited from owning or possessing a firearm.

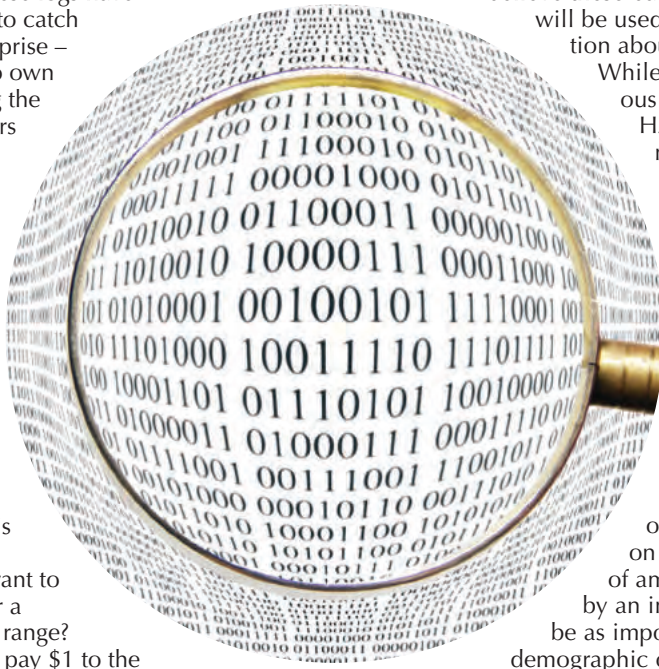

(b) Commencing July 1, 2019, the file shall also be used to cross-reference persons who attempt to acquire ammunition to determine if those persons fall within a class of persons who are prohibited from owning or possessing ammunition.

We’ve talked to a few of our dealers in California and the general consensus is that most believe these background checks will be used to gather information about gun owners.

While it may seem obvious that they ALREADY HAVE all this information because, as a law-abiding citizen you already registered your guns, it isn’t really so cut and dried. Sure, the powers that be in California already know you are a gun owner, but they don’t know how much or what type of ammo you have on hand. The amounts of ammunition owned by an individual may not be as important as the overall demographic of ammunition

owners in California. It seems like a small thing, but every bit of information gathered becomes a piece of the puzzle. The solution to that puzzle, as far as California lawmakers are concerned, is the revocation of your Second Amendment rights. Why give them more information that they can use to spin the discussion in their favor?

A side effect of this registration is that cost of the ammunition is probably going to increase. The new regulations state that ammunition has to be in an area inaccessible to the public and that an employee must be present if the customer is in an area where they have access to the ammunition. So, now the physical layout of the store probably has to change and staff must be present to help you choose your ammo. The store also has to apply for and receive an ammo-vendor license,

Begin July 1 in California

and all employees are required to complete the paperwork and pass a background check. Think that costs the dealer more? You bet it does, and if they want to stay in business they're going to have to pass that cost along to you. It isn't gouging if there are price hikes due to cost increases on the dealers end, but it doesn't make it any easier to stomach at checkout time.

So, what do you do about it? Buying online is out since that has to go to a licensed dealer where a background check will be performed. Buying out of state and bringing it back in is illegal. You can just buy in bulk, but that doesn't keep your information secure nor does it account for one-off situations where you just need a few rounds to hunt, sight in, or whatever casual shooting you need to do. You're left to either grin and bear it, or you could consider reloading your own ammunition. Reloading is not covered under the current law, although they do mention that prohibited persons cannot possess reloaded ammunition, so why not get started learning to reload now?

For some, reloading discussions inevitably turn to the startup costs. We've written *ad nauseum* about the cost savings when you reload and we even have calculators on our website that help you figure out just how long it will take for your reloading equipment to pay for itself. If you check our site you'll see a "Break Even Calculator" that helps you figure out how many months it will take for your reloading equipment to pay for itself. Using this tool even casual shooters usually see a 100-percent breakeven point in just a few years. More frequent shooters will, obviously, pay off their equipment much faster. An important consideration here is that we are talking about a radical change in your ammo buying and what amounts to a tax via the background check fee. Sure it's \$1 now, but what will it be in 5 or 10 years? We also have to consider the inevitable impact that these regulations will have on ammo cost. All of these elements factor in to your total cost to buy ammo vs. reloading your own.

So, why aren't you reloading? Is it because you're worried about learning the process? You took the time to learn how to safely handle and operate your firearms, right? Well this is no different. Reloading is a safe, practical hobby and it doesn't require an engineering degree to get started. Setting up the press is covered in the manual that comes with the machine. Just follow the directions and, if you get stuck, give us a call. We can make sure that you've set up your Dillon Precision Reloader the right way to get you on the path to making quality ammunition. That support

and customer service doesn't end after the initial purchase, either. Dillon Precision is there for you if a part breaks or wears out with support via telephone, live chat or email six days per week. So if you have a problem with one of our consumer-grade machines we've got you covered with our Lifetime, No BS Warranty.

Some of you have probably heard that you should start on a single-stage press "just to get your feet wet." Well, that may sound like sage advice, but it couldn't be more wrong. The set up process is exactly the same. You still have to set up your dies on a single-stage press, just like you do on a Dillon Progressive, but with Dillon you only have to do it once. That's right, set the dies once and you don't have to fuss with machine settings again unless you decide that you want to change something. With a single-stage press you have to take dies in and out of the machine and check them each time to make sure the lock rings haven't come loose. You're also limited to reloading one step at a time. That means you have to perform each step of the reloading process one at a time, swapping dies out as you go and handling each case multiple times in the process. Sound slow and tedious? Well a lot of people think it is, especially if you are loading hundreds or thousands of rounds at a time. With a Dillon reloader you can make hundreds of rounds per hour, or more, depending upon which model you choose. I know how I'd rather spend my time.

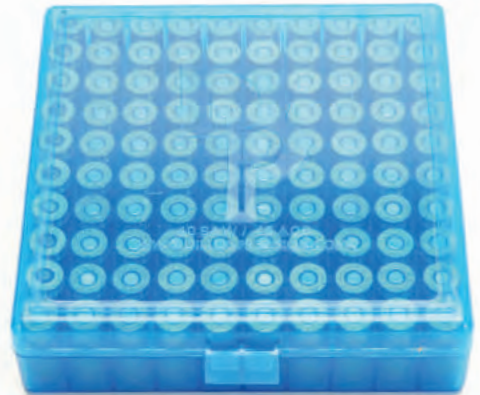

Another common concern with new or potential reloaders is safety. You want to make sure you make quality ammunition that is safe to use and functions well in your firearms. That's a very reasonable concern and one that is easily addressed by insuring that you only reference reliable sources for your reloading data. We recommend the *Lyman 50th Edition Reloading Manual*, because we feel it's important to have a hard copy of your data, but you can use reliable online sources as well. The Hodgdon Reloading Data Center (hodgdonreloading.com) is an excellent online source of reloading data that covers rifle, pistol and shotgun data. In the end most reloaders end up with a variety of manuals all of which can be an excellent source of data for reloading high quality, safe ammunition.

On a final note I'd like to point out that we aren't trying to pick on Californians here. We're trying to offer an alternative to these ammunition background checks. We're also aware that many ideas that start in California have a way of moving around to rest of the country as well, so it might be a good time for all of us who haven't already done so, to consider reloading.

AMMO BOXES ARE COVERED BY DILLON'S LIFETIME WARRANTY

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL650 cartridge bins are 6-3/4" long x 3-

7/16" wide x 2-13/16" deep.

- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Description	Stock #	Each	6 ea.	12 ea.

"SL 900" Bin	P26-17125	10.50	56.94	106.92

Dillon Utility Boxes[^]

Dillon's Utility boxes are ideal for all those accessories that don't quite fit into the compartments of your shooting bag. The large box measures 13-1/2" x 5-3/4" x 2-1/4" and the small box measures 4-5/8" x 6-3/8" x 1-5/8". Use them for cleaning gear, extra magazines, repair parts, first aid supplies, reloading accessories and tools – the list is endless.

Swab-its – A Swab for Every Job! ⁶⁵

No s#!+, there I was...in my office, cleaning my revolver when the boss walks in with that “whisky-tango-foxtrot” look on his face. “Hi,” I said (*thinking fast*), “I’m trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!” The **Bore-tips Swabs** REALLY DO work. What you can’t see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

.22/5.56mm (6 ea.)	P26-15310	\$4.98
.243/6mm (6 ea.)	P26-15311	4.98

Multi Pack: (6) .22/5.56, (6) .30/7.62, (6) .357/9mm, (5) .40/10mm, (5) .45	P26-43312	26.99

Gun-tips®

Gun-tips® Extended Reach Firearm Cleaning swabs by Swab-its® revolutionize the way you clean your gun. The foam tips are lint free, reusable and ideal for cleaning trigger assemblies, slide rails, springs, extractors and anywhere else space is tight. 24 per package.

P26-12583 \$9.99

Bore-Whips™

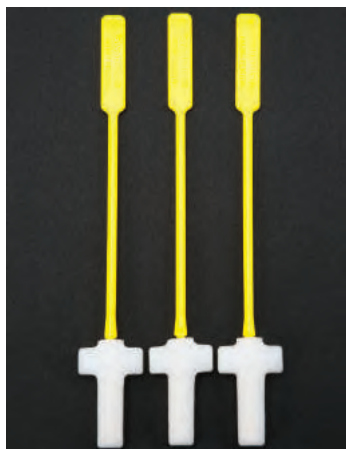

Bore-Whips™ .17 and .22 caliber (pictured) by Swab-its® are ideal for air rifles, rimfires or any other .17 or .22 caliber firearm that’s difficult to clean from the breach. The foam tips are reusable and the handle functions as an empty chamber indicator.

Star Chamber

Star Chamber Cleaning Foam Swabs™ are for AR-15, M4 and similar MSRs. 3-pack
P26-10056 \$13.99

Handgun Cleaning Kit

The Swab-its® Handgun Cleaning Kit for 9mm/.357 caliber handguns contains four Bore-Sticks™, a three-in-one tool that replaces the cleaning rod, jag, and patch; a nine-piece Multi-Surface Gun-Tips® package for internal and external cleaning requirements; and a 0.4 ounce bottle of BREAKTHROUGH® Battle Born HP Pro lubricant and protectant. As with all Swab-its products, the Bore-Sticks and Gun-Tips are made of reusable, lint-free foam that is washable with degreasing soap and water or mineral spirits.

P26-11907 \$19.95

MSR Cleaning Kit

The Swab-its® Modern Sporting Rifle Cleaning Kit contains 6 .223/5.56 Bore-tips® for bore maintenance; a nine-piece Multi-Surface Gun-Tips® package for internal and external cleaning requirements; three Star Chamber Cleaning Foam Swabs™; and a 0.4 ounce bottle of BREAKTHROUGH® Battle Born HP Pro lubricant and protectant. As with all Swab-its products, the Bore-Sticks, Gun-Tips and Star Chamber Swabs are made of reusable, lint-free foam that is washable with degreasing soap and water or mineral spirits.

66 New Products from Slip 2000

725 Gun Cleaner Degreaser

should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks!

NOTE: To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.

16 Oz. P26-19237 \$21.99

Slip 2000 Carbon Killer provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact.

NOTE: Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.

16 Oz. P26-19234 \$21.99

Slip 2000's Extreme Cleaning System contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

P26-11652 \$25.99

Slip 2000's AR Cleaning System contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

P26-11676 \$19.99

Slip 2000 Extreme Weapons Lubricant (EWL)

was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

4 Oz. P26-11644 \$18.99

Slip 2000 EWL30

has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. P26-11645 \$18.99

Slip 2000 Copper Cutter

is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing!

NOTE: It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.

4 Oz. P26-11646 \$11.99

Each Slip 2000 Gun Wipe

packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube.

Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack P26-11674 \$14.99

Lyman Pick & Brush Set

Lyman's Pick and Brush Set is an indispensable item for your cleaning supplies and range bag.

P26-40160 \$3.99

MIL-COMM Extreme Performance Lubricants

TW25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

0.5 Oz. Syringe P26-15732 \$10.99

1.5 Ounces P26-15731 14.50

Revolver BLAST with TW25B is an all-synthetic lubricant/protectant specifically designed for revolvers.

4.2 Oz. Aerosol P26-66677 \$11.95

E-Z Brite Wonder Cloth

On gun dealers shelves since 1976, this product is still a must for keeping stainless steel and nickel-finished revolvers looking like new. Demand the original lead and carbon wipe!

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is for use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).
 Slide-Glide Standard **P26-15571 \$7.95**
 Slide-Glide Lite **P26-15572 7.95**

Microlon UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

70 ELITE TACTICAL SYSTEMS MAGS & LOADERS

Elite Tactical Systems' C.A.M. Rifle Magazine Loader loads AR15, AK47, AK74, FN SCAR-16/17, AR10, G36, Steyr AUG, MP5, CZ Scorpion EVO, Colt SMG, UZI and more in 5.56x45/.223, 7.62x51/.308, 7.62x39, .300BLK, 5.45x39, 9mm and more.

The ETS C.A.M. Pistol Magazine Loader loads most 9mm or .40 caliber pistol magazines – including single stacks. It doesn't force rounds through the feed lips, so it won't damage magazines.

Both ETS C.A.M. magazine loaders will lift up to 10 rounds of ammo directly from an ammo tray!

ETS 30-round AR magazines have a built-in coupler that allows multiple magazines to be connected in seconds with no tools. Clip-on dust covers keep dirt and debris out during storage.

ETS magazines for GLOCK® pistols are compatible with aftermarket floorplates for GLOCK magazines, feature

special grip ribs on the floorplate to aid in extraction and are easy to disassemble for cleaning and maintenance.

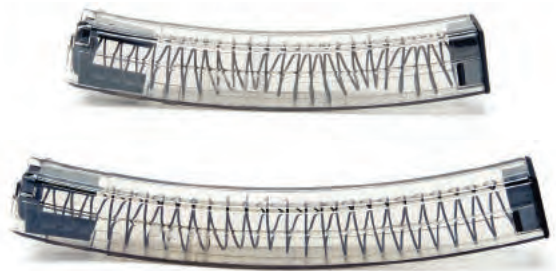

Made in USA With a Lifetime Warranty!

72 KNS Precision, Inc. AR ACCESSORIES

KNS Precision, Inc. AR-15 Bolt Catch Retainer Pin.

P26-33390 \$9.00

Perma-Pin Firing Pin Retainer for M-16 and AR-15 replaces the standard cotter pin found in the bolt carrier to retain the firing pin (as in original Stoner rifles). Made of tool steel. No modification to gun required.

P26-19927 \$9.00

Gen 2 Mod 2 Non-Rotating Trigger/Hammer Pins .154 Diameter. P26-33391 \$33.00

Gen ST Non-Rotating Trigger/Hammer Pins .154 Diameter. P26-33392 \$38.00

Designed by Belarusian custom knifemaker Dmitry Sinkevich, the new **Kershaw Pub** looks like nothing you've ever seen. Closed, you'd never know there was a handy blade inside – although you would definitely see the equally

handy bottle opener. And if you were exceptionally sharp-eyed, you might notice the slotted screwdriver tip right next to the bottle opener. To reveal the blade, just push down on what looks like the key ring attachment. You'll see the blade move out of the compact handle. Keep pushing and the blade will swing all the way out, ready for use. The blade is a modified sheepsfoot with a straight edge and clipped rather than rounded tip. The handle has an anodized aluminum front scale in bright blue and a steel back.

Blade length: 1.6" Closed: 3.1" Open: 4.5"

P26-31323 \$24.95

M-14 Bolt Roller Greaser

SO THAT's how you grease that little S.O.B. (Slick-Operating Bolt, that is.) M-14/M1A Bolt Roller Greaser

74 "The Perfect Small Parts Cleaning Accessory"

P26-10209 \$15.95

The HYSKORE Degreezer consists of a 12" x 6" x 4-1/2" polypropylene tray with an angled drainage surface and a well with a perforated basket for holding and draining small parts. The set also includes a standard double-end nylon gun-cleaning brush. As anyone who has cleaned a gun is aware, cleaning small parts is a major challenge. Given the available technology and fixtures, the standard procedure is to use some kind of cup or similar vessel, pour in a quantity of cleaning solvent, and then pick up the parts one by one and brush them clean. The Degreezer changes all of that. Small parts and even complete trigger groups and bolt assemblies can be placed in the basket and the well filled with solvent to cover the parts and left to soak for extended periods. Then the basket can be withdrawn, draining all the parts. As a bonus, the set includes a cover with an integral holder for the brush. This means the solvent that has been contaminated by the cleaning process can be left in the well of the Degreezer (rather than returned to the bottle) with the cover in place so that it's ready to be used for the next cleaning event. The tray, cover, and basket are made from polypropylene plastic. This has been proven to be impervious to all popular commercial cleaning solutions. It will also resist kerosene, acetone, and gasoline. The Degreezer will quickly become an indispensable fixture on your workbench.

HYSKORE Six-Gun Modular Pistol Rack

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The rest will hold six pistols with either single-stack or double-stack magazines, and can be disassembled and reconfigured to hold guns with wider or narrower grips. The modular feature of the rest also means that two or more rests can be connected together and reconfigured not only to give each gun its own "special home," but also to take maximum advantage of all available space in your safe or vault. This is easy to do using 3/16" threaded rod, washers, and hex nuts available from any home-improvement store. The rack measures 11-1/4" wide x 7-1/2" deep x 6" high.

P26-10208 \$19.99

The Pachmayr Pac-Mag™ Holds up to 30 pounds and the three-magnet design gives the Pac-Mag more strength than any other gun magnet on the market. Secure almost any gun – pistol, rifle or shotgun – practically anywhere!

P26-10098 \$19.99

D•WIPE Towels & D•LEAD Hand Soap by ESCA TECH, INC.

D•WIPE Towels were specially designed for immediate clean up of most contaminants without water. The soft 5.5" x 8" towels are saturated with a unique cleansing formula and aloe vera, and will remove heavy metals from skin and other surfaces.

40 Soft Towels **P26-19916 \$4.95**

Original D•LEAD Hand Soap quickly cleans heavy metals as well as paint dust and firing range residue from the skin and fingernails. Removes lead, nickel, cadmium, arsenic, mercury, silver, zinc and most other heavy metals.

8 Oz. Bottle **P26-19915 \$2.95**

JP ENTERPRISES

TACTICAL PERFORMANCE GEAR

**JP Enterprises .308
High Pressure Enhanced Bolt**
P26-11301 \$199.95

these rifles. Unfortunately, these issues will persist until the manufacturers of ammunition realize that an AR platform requires a unique pressure curve to allow for both accuracy and reliability.

Manufactured to the exacting standards of JP Enterprises' standard bolt offerings, the High Pressure Enhanced Bolt™ design represents a giant leap forward in alleviating the problems traceable to over-pressured loads – namely primer flow, ejector smear, extraction issues, and ignition reliability. In combating these problems, this new bolt design opens up a much broader range of ammunition compatibility and load density in the AR .308/7.62 and other variants such as 6.5mm or 6mm calibers in this platform.

Among its other enhancements, the .308HP bolt features an improved ejector pin hole and modified ejector to mitigate case head extrusion and frequent brass shavings. The JP Enhanced Extractor eliminates virtually all extractor-related failures while the JP Enhanced Gas Rings provide a more reliable, lower friction gas seal with longer lifespan.

While ultimately every end user needs to be aware of the ammunition limitations of their large-frame AR, the JP .308HP bolt offers multiple advancements to vastly increase the ammunition and operational abilities of the platform.

For anyone using .308/7.62 AR-type rifles, it's common knowledge that many factory rounds exhibit excessive primer flow and/or ejector smear. At its core, this is a result of ammo development being done by manufacturers only for manual platforms without testing in semiauto platforms. Some rifle manuals even record the maximum recommended load data beyond the functional range of

Bushnell TRS-25[^]

Ultra Compact Red Dot Sight

Bushnell's Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell's high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute-of-angle dot. TRS-25 (Includes riser, not pictured.) **P26-31318 \$119.95**

Scout Scope Mounts for AK, SKS Rifles

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle **P26-25374 \$79.99**

JP Enterprises Sub-0.5 MOA Semiauto Rifles

By Oleg Volk

Ever since semiauto rifles appeared, decreased accuracy compared to bolt actions has been one of the demerits attributed to them. With the early designs, that was a reasonable complaint. By the 1940s, several features evolved to help accuracy, direct impingement gas operation among them. By the 1950s, Armalite rifles combined that with the more accurate multi-lug rotating bolt. Since then, the development of AR series has mostly gone in the direction of overgassed military carbines with relatively light barrels, but the potential for great accuracy remained. In 1991, a Minnesota specialty gunsmith, John Paul, applied his extensive

experience to JP Enterprises (jprifles.com). The 2007 Long Range Precision (LPR-07) rifle was the highly evolved result of his extensive experience with gas-operated AR type firearms.

The proof of any design is in the performance and in the reliability. Traditionally, accuracy and reliability were considered to be mutually exclusive trade-offs, even though certain designs escaped that dependency. The new JPE rifle discarded the theory that loose clearances ensured reliability, instead building guns that had very close clearances combined with extremely consistent close tolerances. That way, all parts came together the same way every time, actually reducing wear and peening typical of loosely manufactured weapons. This consistency is doubly important with the double-row feeding used by AR rifles, as loosely locking bolts cause cartridges from the left and the right sides of the magazines to sit differently in the chamber, producing diverging groups. That effect is even more pronounced in two-lug AK and tipping bolt SKS rifles, the the point where single-loaded cartridges produce groups that are half or third as large as self-loaded groups. Multilug AR bolts reduce this effect in general, and precisely machined JP bolts even more so. A typical JP rifle shoots 0.5 MOA with decent ammunition, right out of the box. Once matched to the best load and

properly adjusted, 0.25 to 0.3 MOA is possible. Such performance was only recently the domain of single-shot bolt actions, but now comes in a portable semiauto package.

Besides high quality barrels and precisely matched barrel extensions and bolt lugs, LPR-07 features a very unusual receiver. Instead of the T-shaped charging handle, it uses a wide folding paddle on the left. This charging handle can be operated without breaking the cheek weld, and the floating cover underneath seals the receiver opening against ingress of dirt and against escape of gas when using sound suppressors. With the traditional charging handle gone and the opening in the back of the receiver eliminated, the rifle becomes much easier to shoot suppressed, as the most direct path for the gas to the shooter's face is gone.

Regular AR actions use a fixed gas port, simply venting the excess gas out of the ejection port. That allows the use of an over-strength buffer spring to ensure reliable return of the bolt and carrier into battery. The obvious downside is the relatively violent cycling, though nothing as jarring as roller-retarded blowback. As a result, the sight picture is disturbed more than necessary, making it hard to spot your own shots. JP solved this problem on both ends of the gun, starting with an adjustable gas port (improved with a locking detent on the most

The proof of any design is in the performance.

Left, the JP Enterprises' LPR-07 rifle in the field. Below, firing the LPR-07 prone from a rucksack rest.

Above, JP Enterprises' SCR-11 rifle with a NIGHTFORCE NXS 2.5-10x32 Riflescope.

recent models). It takes about 10 shots to determine the setting for a particular load. Since different ammunition has wildly dissimilar points of impact at distance, it makes sense to pick one factory or handload and stick to it. On the back of the gun, the traditional weight and spring buffer have been replaced with Silent Captured Spring, a modular component allowing variable buffer mass and spring strength. Unlike the standard buffer, SCS has greatly reduced friction and no "sproing!" during cycling. Being of a fixed length when at rest, it doesn't require a plunger for retention, that that part may be removed for ease of maintenance. With typical factory ammunition, the default configuration works perfectly.

The barrel is the heart of any rifle: you can get them in various lengths and weights. For heat dissipation, an aluminum radiator is available as an option. Being light but very thermally conductive, this radiator fits even under the slim JP handguard and keeps the barrel significantly cooler during sustained fire. Stress-relieved barrels appear to have no thermal shift at all from the cold bore to the bottom of a 20-round magazine, making for excellent practical accuracy. When I tested LPR-07, it was the field configuration with a medium-weight 18" barrel and a 3.5x35 Trijicon machine gun optic installed. With 168 gr. Federal Gold Match, this rifle shot 0.5 MOA with no adjustments needed. That's a respectable result for the low-magnification optic and shooting off a bipod.

The barrel is the heart of any rifle.

LPR-07 is available with standard or reduced-weight bolt carrier. The lighter carrier allows for less gas in the system, and a lighter return spring. It is best suited to the precision-rifle role.

Although, in theory, it's less resistant to fouling, the low-mass carrier is the same used in the Remington RSASS Army sniper rifle. For very heavy use, such as with a select-fire configuration, a full-mass or variable-mass bolt carrier is also available. As shipped, the LRP-07 is available with or without integral dust cover and forward assist features for dusty or muddy environments.

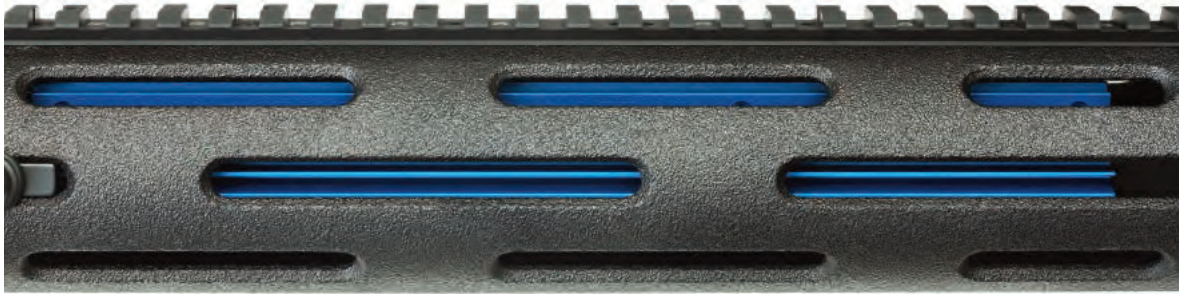

Accurate shooting is impossible without precise trigger control, so curved, flat and roller triggers are available as drop-in units, complete with low-profile ambidextrous safety levers. Pull weight can be changed with the provided hammer spring options. Triggers, and most other JP parts are available separately for other AR10 and AR15 rifles, but buying

an actual complete JP rifle seems like the best choice to me. The degree of integration between all components is very well thought out.

In 2011, JP added a small-frame option, the Side Charging Rifle (SCR-11). Essentially a scaled down LPR-07, the .223 variant performed as impressively. With a Gemtech sound suppressor attached to the 20-inch medium barrel, it recoiled and sounded more like a .22 LR. The enclosed receiver back and adjustable gas port ensured that no blowback disturbed the shooter. The Super-

Top, the SCR-11 receiver. Above, left side profile of the SCR-11. Note the blue aluminum radiator on the barrel. Below, a close up of the aluminum radiator.

match barrel with individually headspaced bolt lived up to its name. With plain SIG 55 gr. ball ammunition, it shot 0.6 MOA, with Black Hills 55 gr. around 0.5 MOA. Heavier bullets tend to perform better, so tuned handloads, as well as Hornady or Federal 77 gr. match offerings get closer to 0.35MOA – at that point, the competency of the shooter makes as great a difference as the weapon system. While I cannot shoot my own rifle as competently as some of my friends can, I still get five-shot groups with all holes overlapping – SCR-11 makes me look like a much better marksman.

The quality of JP machining is such that I mistook the muzzle brake for an integral element of the barrel, so imperceptible was the line between

the two. Viewed at life-size magnification through a macro lens, JP bolt and carrier parts show no imperfections typical of mass-produced parts. With pricing starting at \$2700 (SCR-11) and \$3300 (LRP-07), these rifles deliver great precision and high reliability right out of the box. Having shot both rifles and also the JP 6.5 Creedmoor (with side and rear charging PCS-19 upper) extensively with wide variety of ammunition and no cleaning, I have yet to experience a single malfunction. Apparently, quality design and manufacturing has taken precision riflecraft from the realm of the arcane arts to the realm of routine – as long as the user keeps up his end on the rangefinding, wind reading and trigger control.
