New-Reloader **XL 750** Package

You've made the decision that loading your own ammunition is right for you.

You're ready to pull the trigger, but uncertain of exactly what you need.

Dillon has taken the work out of this. We have assembled a New-Reloader Package, featuring our new XL 750 reloading machine, with the most popular machine options, along with the accessories you'll need to begin reloading immediately.

This package is available in 9mm, .223/5.56mm, or BOTH.

9mm 750 Package:

- XL 750 in 9mm
- 9mm Die Set
- Bench Wrench
- Small Pistol Casefeeder
- XL 750/650 Strong Mount
- Bullet Tray Kit
- Roller Handle
- 9mm Case Gage
- D-Terminator Digital Scale
- Primer Flip Tray
- 4 Small Primer Pickup Tubes
- Digital Calipers

The Complete Reloading Manual for the 9mm Luger

Total: \$1453.87

.223/5.56mm 750 Package:

- XL 750 in .223/5.56mm
- .223/5.56 Die Set
- Bench Wrench
- Small Rifle Casefeeder
- XL 750/650 Strong Mount
- Bullet Tray Kit
- Roller Handle
- .223/5.56 Case Gage
- Dillon Case Lube
- D-Terminator Digital Scale
- Primer Flip Tray
- 4 Small Primer Pickup Tubes
- Digital Calipers

The Complete Reloading Manual for the .223 Rem.

Total: \$1488.86

Combo Package (.223 Conversion Pictured at Right) Includes the 9mm Package Above, Plus:

- .223/5.56 Conversion Kit
- .223/5.56 Die Set
- XL 750 Quick Change
- .223 Case Gage
- Dillon Case Lube
- Small Rifle Casefeed Plate
- The Complete Reloading Manual for the .223 Rem.*

**Total w/9mm Pkg.:
\$1843.80**

ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

1. Right of Quality – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.

2. Right to Test and Send-Back – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.

3. Right of Service – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.

4. Right of Warranty – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*

5. Right to be Heard – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his company from all the others at the time was the warranty and customer service he offered. We constantly strive to live up to his standards. Please let us know if we're not succeeding.

CP 2000^A

Dillon's First DEDICATED Case-Processing Machine!

- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL 1100 and Super 1050, the CP 2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP 2000 will make your task MUCH easier.

Rapid Trim 1500 Case Trimmer[^]

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **P71-62164** is **\$349.99**. (Available only in 110 volt 60 Hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **P71-13141**, are **\$20.99** each. Upper lock rings, **P71-13559**, are **\$6.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

The Long Ranger

Henry Repeating Arms' "Gear-Drive" Lever Gun

Pairing the Long Ranger with quality ammunition will not only make an accurate and true rifle, it will also provide the necessary power for the game you're hunting.

A 6-lug rotating bolt head (inset below) essentially makes this rifle a lever-operated bolt-action rifle. The rotating bolt also keeps this lever action cleaner than conventional alternatives.

By Jonathan Kilburn

There are few companies that can boast of a reputation similar to that of Henry Repeating Arms. Formed in Brooklyn, New York and currently seated deep in New Jersey, Henry is one of America's finest firearms manufacturers. Not many would think that the congested (and VERY blue) state of New Jersey would be home to this delightful gun company. Started in 1996, Henry produced some well-priced lever actions in .22 LR. Today, they have many models to select from in a broad array of calibers.

One of the new designs from Henry is essentially a lever-operated bolt-action rifle – The Long Ranger. It features a 6-lug rotating bolt head similar to those found in bolt-action and semiautomatic rifles, and feeds from a removable magazine, making it possible to use unconventional ammunition types in a lever-action rifle. Currently, they produce Long Rangers chambered in .223 Remington/5.56 NATO, .243 Winchester, .308 Winchester and 6.5 Creedmoor. Both the 20" barrel and 22" barrel (6.5 Creedmoor only) versions are available with or without sights.

While the barrel remains a very sleek and seamless feature, the stock seems to make the entire gun truly shine. The walnut stock is perfectly fit and finished. From a distance, it looks as if the rifle is one long piece of material sculpted into the shape of a rifle.

First Impressions

Because of the precise fit and finish, the Long Ranger appeared to me as a toy from a distance. Up close, the walnut stock and dark matte bluing brought the rifle together in a precisely made and nearly custom-fitted rifle. The barrel is free floated and protected by the walnut forend with only a small gap between. When handling the rifle, it doesn't feel like it weighs nearly seven

pounds. The hefty buttstock puts the weight right into the shoulder, while the barrel is a bit lighter to make it easy to aim without producing too much fatigue.

What was noticeable to me was the lack of exterior markings. The serial number, model and all ATF-required information are on the edge of the magazine well. With a small push of the mag-release button the 4-round magazine could be pulled free and the empty well can be inspected. I was a little disappointed that the magazine did not have a spring assist, but that's personal preference. All things considered; it's one of the best-looking rifles I've seen in a long time.

Use

The bolt requires some getting used to, compared to other lever- and bolt-action rifles. The bolt is manipulated by the lever via a ratcheting or geared system on the bottom of the carrier. This meant that it didn't feel as smooth to me as a well-lubricated bolt action and took more effort than a pivot-manipulated lever action. This isn't bad, it merely took some getting used to the rifle action in order to make sure it was moving efficiently.

The magazine feeds incredibly easily. While the empty magazine forces the user to manipulate the bolt over the follower, a loaded magazine allows for smooth transitioning of the cartridge into the chamber. The 6-lug bolt locks into place with incredible ease. With the patented trigger safety from Henry, the receiver remains smooth and featureless except for the elegant magazine release. The trigger is the only thing to focus on and has

While not recommended, steel-cased ammunition will cycle without any issues though this rugged rifle.

a crisp pull with nearly no creep, a stiff wall, and a pull of just under 4 pounds.

The iron sights were easy enough to use and not extraordinary in any way. The rear sight folds down and the front sight is a standard dovetail post. I added a small Picatinny rail to the top of the receiver, which works incredibly well for most optics; however, it obscured the ability to use the iron sights. I'm sure there are alternative rail systems that can be utilized and will not obscure the iron sights. Henry offers an EGW rail that allows the user to continue to use the irons. Even with the higher rail it's still recommended to have a hammer extension when using a scope.

One of the drawbacks to many – not all – lever-action rifles is the lack of mounting hardware for slings. Henry has added a forward ring mount on the tip of the forend and a rear mount on the walnut stock. While I did not attach a sling to this particular rifle, they appear to be well built and of excellent quality.

Hands On

I took the rifle to the range and brought some ammunition from TulAmmo; steel-cased FMJ 150 grain. In addition, we were supplied some Federal Premium Gold Medal Sierra MatchKing 168 grain. While we shot other ammunition choices through it, these were the two extremes of quality compared.

The TulAmmo ammunition was a bit harder to feed due to the uncoated steel case. Wolf or Barnaul might feed a little easier. The magazine holds everything well, fed with a little extra push, and chambered with a nice bolt lock. Running four sets of five shots 10 minutes apart from one another, the best group at 100 yards

was 2.5 MOA. This is more likely because of my shooting using iron sights than anything else.

The Federal Premium was loaded up second and did not exhibit any difficulty feeding into the chamber. The magazine held everything easily and with no play or movement. Following an identical pattern, I ran four sets of five shots separated by 10 minutes to allow the barrel ample time to cool. At 100 yards I was pulling in 1.5 MOA using the iron sights. It's clear this is a sub-MOA rifle in the right hands.

Overall Impressions and Conclusion

Simply put, Henry's Long Ranger rifle is amazing. While other companies produce a similar rifle, the Henry meets a pricepoint and features hard-to-beat quality. The fit and finish is above average and easy to see. Arguably, one of the best features is the discrete placement of the serial numbers and information, emitting a retro kind of look. While it can occasionally be hard to actuate the lever, it makes sense with a ratcheting system and rotating bolt head. Regardless, it still runs smooth, even if not as smooth as Henry's other lever guns.

While I tested a .308, the Long Ranger comes in enough common calibers to definitely support the \$1105 MSRP. Add the quality to Henry's excellent customer service and lifetime guarantee, and this is one tool meant to last several lifetimes. I can't say enough good things about the Long Ranger.

Henry Repeating Arms

Case Preparation Equipment

Vibratory Case Cleaners Case/Media Separators

CM-2000 Case/Media Separator[^] P71-20675 \$81.99
 CM-500 Case/Media Separator[^] P71-21045 \$49.99

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works

great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

PRIMER FLIP TRAY

A heavy, high-quality tray large enough for the Federal primer package. **P71-13606, \$23.99 ea.**

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that’s still only a part of the story.

Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon’s double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

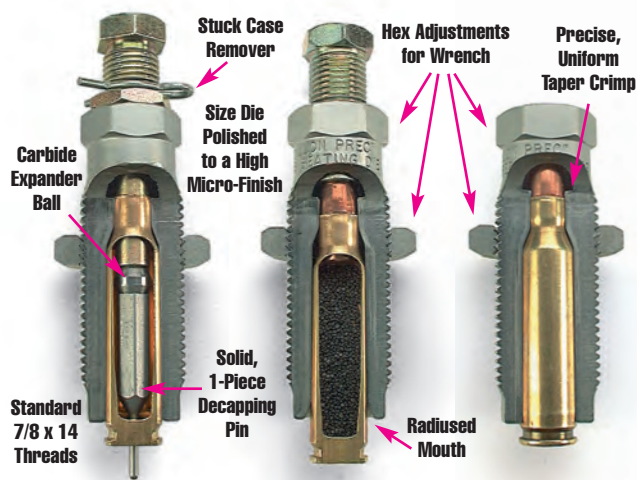

We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

Dillon Carbide Pistol Dies (Three-Die Sets)

.32 S&W Long/.32 H&R Mag.	P71-14426	\$75.99

Spare Decapping Pins

Package of 10	P71-21528	\$7.99
---------------	-----------	--------

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Mr. Bulletfeeder[®]

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collator to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

On the Cover

If this month's cover is giving you a sense of *Déjà vu*, it might be because we used a similar theme for the cover of the April 2005 *Blue Press*.

(See inset, bottom right.)

We used the same model, Cathy Rankin, (cathyrankin.com) (@rushfanatic) shown at right wearing her "Kill Bill" movie-tribute top.

It's a different Ford GT, thanks to Chip Beck, whose car is one of only 114 street-legal (8 race cars and some prototypes were produced) Ford GTs made in 2017.

It's serial #34, with a hand-built 647 HP twin-turbo V-6 engine, 7-speed dual-clutch transaxle, and all-carbon-fiber construction. It's one of one painted Speed Yellow and built to Chip's specs. Top speed is 216 mph, 0 to 60 in 3 seconds.

The gun? *What gun?* I was looking at the CAR – honest!

Will we do a poster this time? That remains to be seen.

Diana Brafford @gungirl1

1. First gun you ever fired?

Diana: Ruger .22 Pistol.

Toni: Ruger .22.

2. What's your favorite gun?

Diana: Right now I'm loving my boyfriend's Vudoo .22 LR Rifle for NRL (National Rifle League) 22 matches. Super accurate, quiet, inexpensive ammo, and a fun discipline – what's not to love?

Toni: GLOCK 17L.

3. Do you have any rituals before you shoot?

Diana: No but I should.

Toni: I have a few actually. First, I check my mags a bunch to make sure they are loaded to full capacity, then I tend to take a deep breath, and finally I say to myself "time to get it" or "just have fun."

Get 2

4. How many rounds a year do you shoot on average?

Diana: 12k.

Toni: I honestly don't know because I do both live and dry firing.

5. Most useless thing you own?

Diana: Four watches with dead batteries.

Toni: The 8-foot Bob's Big Boy inside my house.

6. What else do you do for fun?

Diana: Thrift shop, rock climb, and a little golf here and there.

Toni: I love rock climbing, going to the beach, shopping, working out – basically I hate sitting still for a long period of time.

7. Favorite place on Earth?

Diana: At the moment, Arizona has my heart.

Toni: Either Disneyland (yes, I have a season pass) or the beach.

8. Most annoying thing about you?

Diana: Inserting non-important details into other peoples stories. The worst!

Toni: I don't get to spend as much time with my family since I'm constantly busy.

9. Craziest thing you've ever done?

Diana: Pass up a college degree to pursue creating my own business.

Diana Brafford

Know

Toni: I went skydiving and didn't tell my parents about it until I got home. As I was falling out of the sky I realized I probably should have told them where I was.

10. Dream job?

Diana: Live on a ranch and run an animal rescue with all the animals: goats, dogs, pigs, cats, you name it.

Toni: What I do now, which is being a police officer in the City of Los Angeles and also a competition shooter for Taran Tactical Innovations.

11. Who has inspired you the most?

Diana: It hasn't been and never will be just one person for me. In shooting, I'd have to say it's Travis McCamish, for his unrelenting drive to be the best to ever do it.

Toni: My Dad – I always looked up to him and I followed in his footsteps by becoming a police officer.

12. Who would play you in a movie?

Diana: Everyone says Chloë Sevigny is my doppelgänger, so probably her – she's a bit on the strange side so it's not much of stretch.

Toni: Rachel McAdams.

13. If you could have a conversation with anyone from the past, who would it be?

Toni McBride @toni_mcbride

Diana: Honestly, I don't know! I think I'd want it to be someone from at least a few centuries ago just to get some perspective of the world during a totally different era.

Toni: Walt Disney.

14. Who's in your regular crew?

Diana: The DMF Crew – they know who they are.

Toni: My parents Jamie and Daiva, my sister Jackie, and Taran Butler from TTI. I wouldn't be where I am today without their support.

15. Words to live by?

Diana: Never be afraid to be a beginner again.

Toni: "I'm just gonna go for it" (said with a smile and a shrug).

Toni McBride

XL 750[^]

STANDARD FEATURES:

- Made in the USA
- Automatic Indexing
- Automatic Powder Measure
- Automatic Linear Priming System
- Uses Standard 7/8" x 14 Dies
- Loading Rate: 500-800 Rds./Hr.
- 5-Station Interchangeable Toolhead
- Comes With One Caliber Conversion
- Loads 115 Calibers Up To .338 Lapua
- Index Block Roller for Smoother Indexing
- Spring-Loaded Priming Station Case Locator
- Lifetime "No-B.S." Warranty

New Products from

Like pretty much everything from Berry's Manufacturing, this 9" x 12" x 10" deep stackable utility box is made in America and covered by a lifetime warranty. *This one happens to be filled with once-fired, processed (polished, sized, deprimed, primer pockets swaged) 9mm cartridge cases (sold separately below) prepared at Dillon Precision on our new CP 2000 Case-Processing Machine.* The box is designed to stack and is great for storing bulky items. If your gun room/garage looks anything like ours, these will help you get organized. So, whether you're looking to store shooting accessories, ammo components, or car parts (we have more than our share of all of the above) these boxes are ideal. The best part is that they're transparent, so when you fill them, you don't have to open the **WHOLE** stack to find what you're looking for.

Stackable Utility Box P71-40194 \$13.99
1000-pkg. 9mm Brass P71-55018 \$59.99

Berry's Powder Funnel Set provides a wide range of flexibility when it comes to reloading. The two-funnel set comes with inserts that allow loading calibers from .17 to .50 caliber. Constructed of tough translucent polycarbonate material, they are covered by a lifetime warranty and made in the USA.

Powder Funnel Set P71-40191 \$6.99

Berry's Pistol Cases are as tough as they look. Available in a desert tan color, they're injection molded out of high-impact polypropylene and contain high-density crate foam to provide a soft, protected bed for your firearm investment. They're TSA approved when appropriate locks are added. Available as a single-pistol or double-pistol case, they carry a lifetime warranty and are made in the USA.

Single-Pistol Case P71-40192 \$9.99
Double-Pistol Case P71-40193 15.99

AMMOBRASS, LLC

The AmmoBrass Swage Setter is for use with any swaging devices such as Dillon's Super Swage 600, Dillon 1050/1100 presses, and almost any other swaging device to assist you in properly setting your swage rod and swage back-up die.

BL 550[^]

Dillon's Basic Loader

\$299⁹⁹

P71-15399

Reloading Dies and Caliber Conversions sold separately

Pictured with optional accessories:

Strong Mount P71-22051 \$59.99

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of

versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers. The additional toolheads are \$27.99 each, or \$25.99 each if you

buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them. A powder measure adapter is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

AUTO PRIME SYSTEM[^] P71-16627 \$94.99

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. P71-20302 \$29.99

AUTO POWDER SYSTEM[^]

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency. P71-20251 \$99.99

OPTIONAL MAGNUM RIFLE POWDER BAR

P71-21353 \$34.99

AUTO EJECT SYSTEM[^]

Greatly increases your ammo production capabilities and adds a Cartridge Chute/ Bracket and a Cartridge Bin to your reloader.

P71-22120 \$35.99

BL 550 POWDER DIE[^]

Extra powder dies for your BL 550 make it easier to set up additional toolheads for loading different calibers.

Powder Die: P71-16629 \$21.99

Oversize Die: P71-16626 21.99

Plastic Funnel: P71-16617 7.99

POWDER MEASURE ADAPTER

If you load rifle cartridges with long-grain extruded powder, you can now use any manufacturer's powder measure with 7/8" x 14 threads on your RL 450, AT 500, BL 550 or RL 550. (Requires the use of an RL 450 powder die – see below.) P71-20029 \$26.99

RL 450 Powder Die P71-20308 25.99

 I.D. Card Holder (Inset, Left)[^] **P71-14575 2.99**

Shooting Mat

Dillon's shooting mat is made of tough ballistic-weave nylon fabric, with a large skid-resistant elbow pad area. The "ground" side is moisture resistant and wipes clean easily. The padding is dense, closed-cell foam to provide both shooter comfort and a stable shooting base. The mat is equipped with a shoulder strap, a carry handle and two straps with snap-release buckles.

Blue Press 31

Dillon Reloading Accessories

A **Strong Mount** increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only mount raises the machine 6" above the bench top. All mounts come

with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 750/650	P71-22051	\$59.99
XL 750/650-only	P71-22052	57.99
"SDB"	P71-22223	72.99

Our **Bullet Tray** is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 750/650 when equipped with the RL 550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	P71-22214	\$47.99
1050 Tray Kit	P71-22215	47.99

The **Low Powder Sensor** provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

P71-16306	\$44.99
------------------	----------------

Our **Toolholders** are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

XL 650 with Wrench Set	P71-11555	\$35.99
RL 550/XL 750 with Wrench Set	P71-11541	33.99
SDB with Wrench Set	P71-19441	32.99
<i>Note: Super 1050 Toolholders include Wrench Set</i>		
1050 with bracket	P71-62202	39.99
1050 w/o bracket	P71-62203	33.99

"D-TERMINATOR" Electronic Scale

- 1500 grain/100 gram capacity
- Accurate to 0.1 grain/0.01 gram
- Uses four AA batteries (included)
- Comes with its own AC adapter
- 100g scale check weight included

NOTE: Dillon electronic scales are covered by a one-year warranty from date of purchase.

\$139.99
P71-10483

Dillon's **"Belted Magnum" Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

P71-97126 \$169.99

"ELIMINATOR" Balance-Beam Scale

\$89.99
P71-13480

The **Powdercheck System** (available for XL 750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

P71-21044, \$71.99 each
Three or more, \$65.99 ea.

An **Aluminum Roller Handle** gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

P71-17950 \$49.99

Dillon's **1" Bench Wrench** fits our 1" Die Lock Rings which give you more space on the toolhead.

P71-10842, \$9.99 each
Two or more, \$8.99 ea.

Our **Machine Maintenance Kits** come with everything you need to keep your Dillon loader cleaned and lubricated up to factory specifications.

Available alone or in combination with a spare parts kit for your machine.

- Maintenance Kit Only **P71-22211 \$31.99**
- w/SDB Spare Parts Kit **P71-97015 39.99**
- w/550 Spare Parts Kit **P71-97016 37.99**
- w/750 Spare Parts Kit **P71-97500 58.99**
- w/1050 Spare Parts Kit **P71-97018 53.99**

The **RF 100 Automatic Primer Filler[^]** eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run! In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you! The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$59.99 each.

- Large Primer Filler **P71-97077 \$379.99**
- Small Primer Filler **P71-97111 379.99**

- Small Conversion **P71-17903 59.99**
- Large Conversion **P71-17902 59.99**
- Nylon Dust Cover[^] **P71-11143 14.99**

[^] **WARNING:** The products offered for sale in this catalog can expose you to chemicals, including Lead, which are known to the State of California to cause cancer, birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

P71-19972 \$39.99

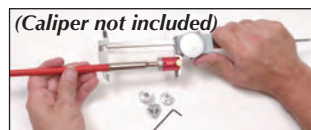

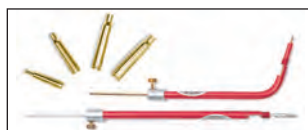

Berry's Mfg. Bullet Puller[^]

Nobody's perfect. A bullet puller makes it easy to recover all your components.

Lyman Products

Lyman's Precision Funnel Set is the ideal system for the serious reloader. The Precision Funnel Set is made to be completely static free, with a body of die-cast aluminum and precision-turned aluminum inserts. This is no "one size fits all" funnel; the Precision Funnel Set uses precision-machined, caliber-specific inserts to properly fit the case neck. The inserts can be quickly and easily installed by simply pushing them into place and then pulling them out when changing calibers. The Precision Funnel Set also comes with a padded storage case that neatly stores extra inserts when not in use. The set includes inserts for .22, .243/6mm, .25/6.5mm, .270/7mm, .30 and .338 caliber rifle cartridges.

P71-11389 \$39.99

The Lyman Scale Weight Check Set enables you to check/calibrate your scale using known weights. Weight Set .5 - 210.5 Gr.

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with

the axis of the case neck. By adjusting the plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

.22 Caliber Neck	P71-48962	\$26.99
6mm Neck	P71-48966	26.99
6.5mm Neck	P71-48965	26.99

.30 Caliber Neck, Long	P71-48963	26.99

Dillon's 1" Bench Wrench

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you're setting up a "naked" machine, there's plenty of room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead. We've addressed this in two ways. We offer 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our 1" wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. All our lock rings fit any standard 7/8" x 14 dies.

AMMO BOXES ARE COVERED BY DILLON'S LIFETIME WARRANTY

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Dillon Teams

Eric Grauffel – 7-time IPSC Handgun World Champion – wearing Dillon’s TechwearUSA AirFlex Shooting Jersey.

In response to everyone who has been asking us for Dillon Precision shooting jerseys, we’ve teamed up with **TechwearUSA** – Your Official Provider of Custom USPSA Gear! The TechwearUSA AirFlex (\$70) is the ultimate performance layer and their lightest weight jersey. Whether aiming your PCC or bow and arrow, the last thing you need is heavy gear holding you down. AirFlex is designed to keep you cool, dry and unencumbered on the range. Superior breathability with a slim, athletic cut ensures a smooth fit. This versatile all-purpose layer can be utilized as a base layer or stand alone. Its high tech fabric features extreme moisture protection, body temperature management and odor resistant properties. Superior wicking and highly breathable qualities makes this jersey fast drying and easy care. Great stretch and silk-like softness promotes comfortable and free movement.

The TechwearUSA Premier Polo (\$95) is made of proprietary Techstatic fabric and is the ultimate competition polo. From its classic cut, added length to make sure it stays tucked in, fold-

over collar, zipper front and side panels made from extra breathable mesh, every detail of this garment has been thought through to help you look, feel and perform at your best.

To order TechwearUSA’s Dillon Precision men’s and women’s shooting jerseys, go to <https://techwearusa.com/garments/branded/dillon-precision.html>. By the way, the “USA” in TechwearUSA signifies that their apparel is MADE HERE!

John Marshall on Classic Firearms:

In a picture dating back to the 1920s, John Thompson...is holding a stockless Model 1921 upward during a demonstration to the police and military.

Auto Ordnance Corporation was chartered as a New York corporation in 1916 by John T. Thompson and later substantially funded and joined by Thomas Fortune Ryan, a wealthy financier. The company developed the Thompson submachine gun and outsourced the production of 15,000 of them to Colt. These first guns became the Models of 1921.

In 1927, responding to requests from some members of the public, the management of the Auto Ordnance Corporation decided to offer a semiautomatic version of their Model 1921. Since the Colt-made guns already existed in inventory, it was a relatively easy job to modify the mechanisms of some of them so they would operate in semiautomatic mode only. Thus they could only fire one shot for each pull of the trigger. This modified gun became known as the Model of 1927. It was never as popular as the selective-fire guns, but this model satisfied those who were uncomfortable with full-automatic guns.

Both full-automatic and semiautomatic Thompsons could be owned in an unrestricted manner in those days. But in response to the widely publicized use of Thompsons in crime, The National Firearms Act of 1934 was enacted by Congress, using its authority to tax. The act imposed a \$200 tax on the making or transfer of NFA-designated items. This act also included the requirement to register full-automatic arms, and this certainly affected owners of Thompson firearms, including the Model 1927. Even though the '27 was semiautomatic only, it could be easily converted back to full-automatic configuration – thus making it subject to the NFA. In concept, any full-auto

converted to semiauto would always be an NFA-subject firearm. The rule was “once a machine gun, always a machine gun.”

In the 1950s, Auto Ordnance Corporation became owned and operated by Numrich Arms Corporation, a gun parts purveyor, in West Hurley, New York. Numerous Thompson submachine gun receivers became Numrich property, and in 1974, Auto Ordnance began to turn out a number of new M1928A1 and M1A1 full-auto guns using those receivers. Also conceived and then manufactured beginning in 1975 were some semiautomatic Thompsons. In order to avoid being subject to the NFA, these guns, designated as Models of 1927A1, had some significant changes. First, the internal mechanisms were altered so that there was little or no interchangeability with full-auto parts. The guns fired from closed bolts rather than open bolts. Also, unlike the original submachine guns and the Model 1927 that had 10-1/2 inch barrels, these newer guns had 16-1/2-inch barrels. This was in order to observe the minimum 16-inch length that exists under the law for rifles. With a Cutts recoil compensator installed at the muzzle, the total barrel length grew to 18 inches. Nearly all were equipped with the original-style vertical forward grip. These have finned barrels designed for better air cooling as did the original 1921 and 1928 submachine guns. Another type that resembled the wartime M1A1 submachine guns was labeled as the M1 Semiautomatic Carbine. These guns had smooth barrels, operating knobs on the right side of their receivers, and had fixed sights with triangular “ears.” All of these semiau-

The Thompson Model 1927A5 Semiauto Pistol

tomatics had buttstocks that were screwed to the receiver in the manner of the M1 and M1A1 submachine guns.

Externally, the new semiauto Thompsons mimicked the original submachine guns in appearance, but the longer barrels were admittedly ungainly and spoiled the traditional look. What was needed was a shorter barrel, but the law required at least 16 inches. With the leadership of Ira Trast, Numrich Arms president, a solution that was finally approved by the Bureau of Alcohol, Tobacco and Firearms took shape.

The Model of 1927A5 was a “pistol” instead of a rifle or carbine. ATF rules stated that if a pistol measured at least 26 inches in overall length (not “readily concealable”), it could have a fairly short barrel combined with a vertical forward grip. The receiver of the Thompson measures about 13 inches, and thus the barrel could be around 13 inches. In actuality, the barrel would tape out at 13-1/2 inches, with the gun having an overall length of 26-1/8 inches. Unfortunately, a shoulder stock could not be affixed, as this would make it a short-barreled rifle, subject to the NFA, complete with registration and tax. So the new pistol was made, but with no provision for attaching a shoulder stock. The gun’s receiver was normally made of an aluminum alloy to save weight, although a few steel-receiver examples are known to exist.

The left side of the gun’s receiver was marked “MODEL OF 1927 A5” over the serial number, and farther back, “THOMPSON SEMI-AUTOMATIC PISTOL” over “CALIBER .45 AUTOMATIC CARTRIDGE.” A reported few were mistakenly marked “THOMPSON

SEMI-AUTOMATIC CARBINE.” Production began in 1977, with 430 made in that first year.

In a picture dating back to the 1920s, John Thompson, the father of the Model 1921 submachine gun, is holding a stockless Model 1921 upward during a demonstration to police and the military. The similarity of that gun to the Model 1927A5 pistol is incredibly striking – the difference in barrel length of just a couple of inches is hardly noticed. The stockless pistol certainly succeeded in generally replicating the looks of the original submachine gun.

In 1994, the Bureau of Alcohol, Tobacco and Firearms had a change of mind, disallowing a forward vertical grip on pistols of any sort. They served notice on Auto Ordnance that the Model 1927A5 could no longer be manufactured under the new ruling. The last 57 guns were made in 1995. In all, 3,346 were made. Serial numbers ran from 100P to 3359P. All of these were “grandfathered” by the BATF and are therefore are still legal to own and transfer. The gun pictured here was made in early 1978, and has an aluminum receiver. The on-top operating knob and the safety lever have been replaced with items that more closely resemble those on the original Thompson guns.

Although the Model 1927A5 pistols are certainly nostalgic in appearance, they have some nagging characteristics. First, it’s awkward to use them in sighted fire, as there is no stabilizing buttstock. Most folks seem to prefer shooting them from the hip, walking the rounds into the target. The trigger is mushy and heavy, resembling that of a double-action type. Trigger

Conceal-Carry Performance Series

\$79⁹⁹

Conceal-Carry Performance Series revolver holsters can be worn strong side, appendix carry or cross draw and are fully molded. Auto holsters are strong-side only.

4-3/4" SA Colts/clones	P71-11560
4-5/8" Ruger Blackhawk	P71-15765
GLOCK 17/22	P71-62277
GLOCK 19/23	P71-62278

This holster/mag pouch combination was designed for the Single Action Shooting Society's "Wild Bunch" category, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more

– so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

By Peter Caroline

We've all done it...sold or traded a gun and, days or years later, regretted it. I've done it many times, but one example really stands out. In 1986, I attended a handgun safety class given by the county sheriff's department. While Massachusetts law at the time did not mandate formal handgun safety training, some local police chiefs on the North Shore took it upon themselves to require same before they'd reluctantly grant or renew a concealed carry permit. The course consisted of a week of classroom instruction followed by a Saturday morning at a local gun club indoor range to qualify. We were told to bring either a .22 or .38 caliber revolver, and the sheriff's department would supply the ammunition and targets. At the time, my gun collection

was not extensive; my only revolver with decent sights was a nickel-plated S&W Model 19 .357 Magnum with a 2-1/2" barrel. I figured it would be up to the task.

On the Friday afternoon before the range test, I stepped off a curb wrong and experienced severe sciatic pain, which persisted overnight. By the time I arrived at the range on Saturday morning, I was in agony. I couldn't sit comfortably, so I stood and waited for my turn on the firing line. When my name was called, the deputy who was handing out the ammunition looked at my revolver and said, "That's a snubby. You can't qualify with a snubby. You won't be able to hit anything!" I explained to the deputy about my back problem, and told him that I just wanted to get the test completed so I could go home and go to bed. If I needed to take the

whole course over again, I would. He handed me my ammo and I stepped up to the line and put every round in the black. Gotta love that gun. I was handed my course completion certificate, and I went home and spent a week flat on my back and on painkillers.

For whatever stupid reason, I sold or traded that Model 19. I figured that I could always buy another one. But I never did get around to replacing it when Model 19s were readily replaceable. After a major lay-off at a big Boston ad agency where I had worked for 17 years, I started my own freelance business. I managed to pay off my mortgage, put two kids through college and move to Arizona. During that time, there were no surplus funds for guns.

Recently, I decided that I was ready to treat myself to another 2-1/2" Model 19, preferably nickel-plated and in close to new condition. I checked Gunbroker.com and discovered that these items were now in the low four-figure range! It was time to

explore other options. I had two other S&W revolvers, a K-frame and an I-frame, both nearly a century old, renewed by Bobby Tyler at Tyler Gunworks, and the results were spectacular. So I set my sights a bit lower, and looked for a likely candidate for a rehab.

After several weeks of searching Gunbroker, I found a blued Model 19-2 with a 2-1/2" barrel, 1960s-vintage, pinned and recessed. The finish appeared to be worn, and it had Pachmayr rubber grips. I put in a bid and to my surprise, won it at a reasonable price.

When the gun arrived, I received a second surprise. The finish was in fact better than the photos on Gunbroker had indicated. I removed the grips and found,

etched on the grip frame, the name and address of the Indiana state police trooper who had owned and carried the gun. The trooper had apparently done some customizing; the trigger is a 0.50"-width target model with the ridges filed down to create a smooth, flat surface. The single-action trigger pull is a crisp 3-1/2 lbs. with a nearly imperceptible movement. A quick trip to the range verified that the gun is quite capable of tight groups and is surprisingly pleasant to shoot, even with .357 defense loads.

“If there is a moral to this story, it is to never, never sell a gun that you like.”

fit the gun and me very well. I went online again and ordered a used Pachmayr grip adapter, similar to the Tyler T-grip, but without the indeterminate wait that the T-grip entails. The overall grip configuration fits my hand perfectly, and the recoil appears to be minimized. At approximately 36 ounces, loaded, the Model 19 is a bit much for pocket carry, so I ordered an unadorned holster from Simply Rugged (simplyrugged.com). It will be carried.

If there is a moral to this story, it is to never, never sell a gun that you like. But obviously, life does not always work that way. More realistically, always try to have a Plan B. You might get lucky.

I'm not a big fan of rubber grips, and I wanted something a bit fancier than wood, so I did some asking around. One of my friends recommended elk stag grips from Grashorn Gunworks (grashornsgunworks.com) in Wyoming. Their work looked quite impressive, and their prices were most reasonable. I picked out a set adorned with silver S&W medallions and an unusual gray cast to the non-bark areas, and they

HYSKORE Six-Gun Modular Pistol Rack

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The rack will hold six pistols with either single-stack or double-stack magazines, and can be disassembled and reconfigured to hold guns with wider or narrower grips. The modular feature of the rack also means that two or more racks can be connected together and reconfigured not only to give each gun its own "special home," but also to take maximum advantage of all available space in your safe or vault. This is easy to do using 3/16" threaded rod, washers, and hex nuts available from any home-improvement store. The rack measures 11-1/4" wide x 7-1/2" deep x 6" high.

P71-10208 \$19.99

Hornady Security Dehumidifiers DESI®PAK Desiccants

Absorb humidity and prevent rust or mildew in gun safes or other enclosed areas.

Moisture-control crystals change color when unit needs recharging. Recharge by plugging into 110V electrical outlet.

P71-66702 \$19.99

Protect your valuables against rust and corrosion. When the moisture control crystals turn pink, recharge unit by placing it in the oven. Unlimited recharges ensure a lifetime of use.

P71-66701 \$19.99

These 532 gram DESI®PAK desiccants absorb moisture better than silica gel. It's an industrial grade material that exceeds the requirements of Mil Spec MIL-D-3464E. Now available in smaller packages for other applications (ammo cans, long-term storage containers, etc.).

MEC-GAR'S 18-ROUND

By Duane Thomas

The high-capacity 9mm really came into its own in the mid-1980s. Suddenly we had an entire class of firearms, dubbed by gunwriter Bob Shimek "Wonderines" that really hadn't existed before. When the Beretta 92 was adopted as the Army's new primary-issue sidearm in 1985, it was actually a big deal that it had a 15-round magazine. By today's standards, that magazine it actually a bit long to only hold 15 rounds. Fortunately, Mec-Gar is there for us with Beretta 92 magazines of the same length holding 18 rounds.

Mec-Gar was established in 1965, and all they make – all they've ever made – is magazines. They've been approached by other companies, Fiat for instance, to begin making automotive parts. The founder of the company died a few years ago, but his philosophy, which has continued after his passing, was, "We're a magazine company. That's what we do. Any time you begin diversifying into other areas, that takes away your focus on what you do really well. We will continue doing nothing but making magazines."

Early-on in the Beretta 92's career as the military M9, Mec-Gar made about the first million magazines for that contract, all 15-rounders because that was the milspec. In 1992, Mec-Gar was awarded a patent on a way to increase the capacity of a standard-length Beretta 92 magazine to 17 rounds. By the way, patent protection only lasts for 20 years, now Beretta is having their factory 17-rounders made by a different company. However, now that Mec-Gar, never a company to rest on its laurels, has figured out how to up the capacity in a reliable Beretta 92 magazine to 18 rounds, Beretta is having

Mec-Gar supply those 18-rounders to them, as well.

But let's go back to 1992 for a moment. When you load a conventional 15-round Beretta 92 magazine, there's a "tongue" of material coming down off the bottom of the follower that serves to center and stabilize it on the spring, and the top of the spring is just slightly narrower than the full width of the area inside the magazine tube just below the follower. When the magazine is fully loaded, the tongue bottoms out on the interior of the metal floorplate.

What Mec-Gar figured out is that if you narrow the side-to-side width of the top coils of the spring, and hollow out the underside of the follower, that "nest" inside the follower will serve the same self-centering/stabilization effect as the tongue. But when the magazine is fully loaded, instead of the follower resting on the top coil of the spring, the top six coils of the spring are up inside the follower. Imagine how much extra space that gives you for cartridges. The original answer was, "room for 17 rounds instead of 15."

Time goes by, in 2007 Mec-Gar went to a polymer floorplate on their Beretta 92 magazines. Because polymer, to give sufficient strength, must be thicker than metal, this entailed making the magazine tube slightly longer. Just enough longer that, with minor tweaks to the follower and spring, Mec-Gar was able to get 18 rounds into the same space that held first 15 rounds, then 17.

Mec-Gar also offers a 20-round Beretta 92 magazine, which is simply the 18-round tube with a slightly longer spring and a Plus-2 polymer floorplate. The 20 is only 5/8-inch longer

than the 18, in contrast to older 20s that had all-metal tubes and were super-long.

BERETTA 92 MAGAZINES

There were no modifications to the external dimensions of the magazine tubes, as far as front-to-rear length or side-to-side width, in order to increase capacity. However there have been subtle modifications versus the classic 15-rounder. For instance, the width of the “diamond” where the tube narrows from double- to singlestack is slightly wider. A piece of feedback Mec-Gar got from police departments whose officers carried their guns and magazines fully loaded for extended periods was that, over time, cartridge cases would actually get scored by the narrow diamond, which formed almost a chisel point inside the tube. Mec-Gar widened the diamond specifically to prevent that.

Also notice, right behind the diamond, is a much shorter and narrower sort of secondary diamond, which isn't there on conventional Beretta 92 magazines. 9mm Parabellum uses a tapered casing which means, right as the rounds are funneling in from double- to singlestack there can be a tendency for the rounds to kind of fishtail inside the tube, which could possibly lead to a failure to feed. Mec-Gar went to the secondary diamond specifically to give keep the rear of the ammo stack more tightly compressed, right as it starts narrowing in, to prevent that happening.

Magazine tubes are heat-treated 1010 carbon steel, and feature Mec-Gar's Anti-Friction Coating (AFC). This is Polytetrafluoroethylene (PTFE) with a secret additive to increase durability and corrosion resistance. In US military salt spray tests, the AFC resisted corrosion for 96 hours. 92 hours meets the milspec. It's also very slick, which decreases friction between rounds and the interior of the tube to promote better feeding.

The springs are Type D music wire, which has good

formability and ductility (the tendency of a material to return to its original shape after being deformed, for instance a magazine spring re-extending after being compressed), and are heat treated for long life.

Followers and floorplates are PA-66 self-lubricating, high-impact polymer. One concern with a polymer follower is, when shooting the gun to slide-lock, you get metal-on-plastic contact as the follower slams into the steel slide stop. PA-66 stands up well.

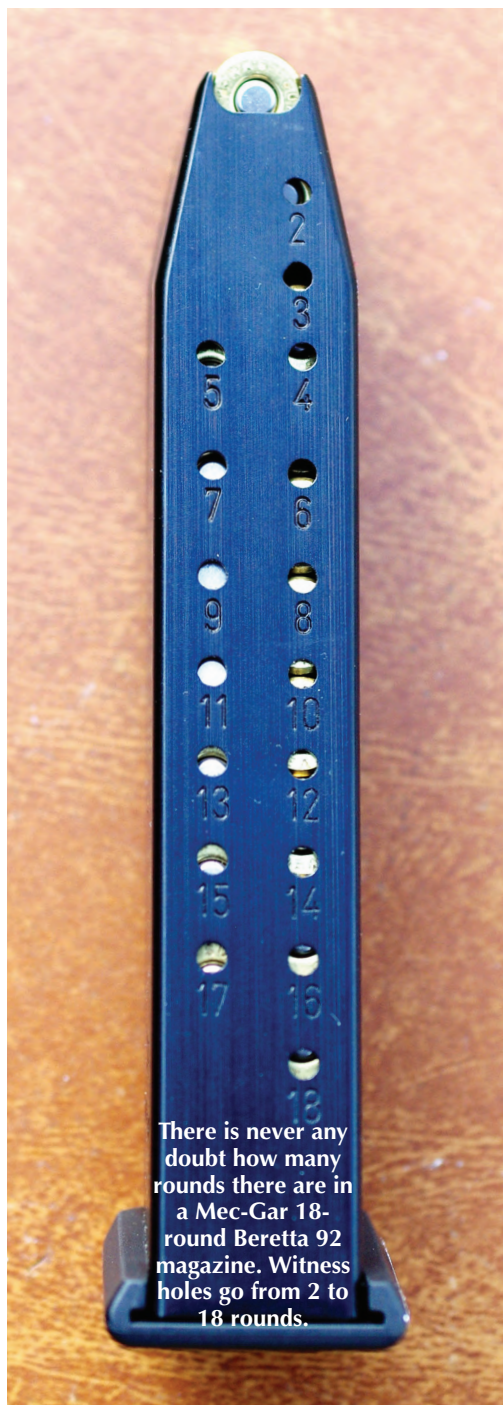

A lot of magazines are very skimpy on the witness holes, giving either none or a few, for instance at 5-round increments. Even GLOCK magazine witness holes only begin at #4. The Mec-Gar 18-rounders start at #2 and go through #18. Therefore, no matter how many rounds there are in the magazine, anything from just a single round visible at the top but no witness holes occluded (one round) all the way through to fully-loaded, there's never any doubt exactly how many rounds there are in a Mec-Gar 18-round Beretta 92 magazine. I like that.

The follower, spring and sub-floorplate are all interlinked, in other words the spring hooks around both the follower and subfloorplate. This ensures your subfloorplate won't go shooting out of the magazine tube, thus possibly to be lost, should your hand slip during disassembly.

Shooting champion and world-class Beretta 92 pistolsmith Ernest Langdon has commented, “The Mec-Gar 18-round magazines are all I use. Well, that and the factory 15-rounders which are also superb. But I prefer the Mec-

Gars.” The Mec-Gar 18-rounders are the generally recognized magazine of God in Beretta 92-land.

Why Gun Owners of America is

By Alan M. Rice, Firearms Instructor & Spokesman,
Gun Owners of America

Most gun owners who are engaged in the battle to protect Second Amendment rights have probably heard that Gun Owners of America (GOA), Gun Owners Foundation (GOF – our litigation arm) and our partners at the Virginia Citizens Defense League (VCDL) along with three individual plaintiffs are suing the Federal Government over the bump stock ban which took effect on March 26, 2019.

Definitions matter, and the definition of a machinegun in 26 U.S. Code § 5845 (b) in no way describes a bump stock. I've included the statutory definition here with emphasis added:

“The term ‘machinegun’ means any weapon which shoots, is designed to shoot, or can be readily restored to shoot, automatically more than one shot, without manual reloading, by a single function of the trigger. The term shall also include the frame or receiver of any such weapon, any part designed and intended solely and exclusively, or combination of parts designed and intended, for use in converting a weapon into a machinegun, and any combination of parts from which a machinegun can be assembled if such parts are in the possession or under the control of a person.”

The definition does not include a device or combination of parts that helps a shooter to work a semiautomatic trigger faster. It also does not include semiautomatic firearms, because those only fire a single shot for each separate mechanical “function” – or press – of the trigger. No matter how fast a trigger on a semiautomatic firearm is pressed, released, and pressed again, the firearm remains a semi-automatic. That is, it fires a single shot for a single press of the trigger.

A bump stock does not convert a semiautomatic firearm into a machinegun. A bump stock merely helps a shooter to bump fire, by helping them to press, then release, and then press a trigger again, with a shorter interval between trigger presses than a shooter who does not have a bump stock. Since the trigger is pressed one time for each cartridge, the firearm remains a semiautomatic.

A belt loop, rubber band, or shoelace can all help a shooter to fire a semiautomatic firearm faster. Of course, none of these objects are machineguns, and

none of them will convert a semiautomatic firearm into a machinegun for a very simple reason: None of these household objects (or a bump stock) will allow uninterrupted fire while the trigger is depressed or until the ammunition supply is exhausted. They all (including a bump stock) require the trigger to be pressed, released and pressed again to discharge another cartridge.

Last year, despite clear statutory language and decades of precedent, the ATF reversed prior decisions and declared “bump stocks” to be machineguns. The “reclassification” was based on current events and politics rather than an objective analysis of what a bump stock does and how it works. And, because of the 1986 ban on the registration of newly manufactured machineguns for use by private citizens, an estimated tens of thousands of lawfully owned bump stocks became contraband on March 26, 2019. Anyone caught with one is subject to arrest and prosecution.

Many have asked: “Why is GOA fighting for what is essentially a ‘range toy’ and not a firearm?” Others have speculated that: “If we just give up the bump stocks, they’ll leave us alone.” Some have asked things like: “Why even bother fighting for something that so few people own?”

The answer to all of these questions is the same. The law is clear on what is a machinegun, and a bump stock, as I

just explained, does not convert a semiautomatic firearm into a machinegun.

If ATF is allowed to call a piece of plastic and metal a machinegun, without Congress passing a bill and sending it to the president for his signature to make it a law, then no firearm or accessory will be safe from bureaucratic overreach. Bureaucrats could possibly decide that a heavier recoil spring, which makes a pistol fire more reliably (and also increases slide speed), or an upgraded trigger, which lowers the amount of pressure needed to fire the weapon and will help a shooter to fire a gun faster, is a machinegun.

And if the courts allow the ATF to rewrite the law the way it has done here, ATF could even more outrageously decide that all semiautomatic firearms are machineguns, in the future under the theory that they meet the ATF’s rewritten definition of the word “machinegun.” This would result in gun owners only being able to possess revolvers, bolt-action and lever-action firearms.

**“A bump stock does not
convert a semiautomatic
firearm into a machinegun....
If ATF is allowed to call a
piece of plastic and metal a
machinegun...then no firearm
or accessory will be safe from
bureaucratic overreach.”**

Suing the Federal Government

These things might seem absurd, but GOA's experts believe that a future, anti-gun administration, emboldened by the new, aggressive approach taken by the ATF, could attempt to enact these restrictions. Unless we are able to overturn the bump stock ban, then that overreach will set the precedent for future infringements.

ATF has a proven track record of overzealous enforcement and, if the bump stock ban is allowed to stand, none of these scenarios could be considered far-fetched or unrealistic. It was only five short years ago that the ATF attempted to ban the sale of "green tip" ammunition even though M855 ammunition did not then, and does not now, fit the statutory definition of armor piercing. GOA proudly helped lead the successful fight to stop that ban.

Status of GOA's Suit

On December 26, 2018, the day that the final rule was published in the Federal Register, but during the 90-day grace period owners were given to surrender or destroy their bump stocks, Gun Owners of America filed suit in US District Court for the Western District of Michigan, Southern Division. We requested a preliminary

injunction so that if the ban is overturned owners and makers of bump stocks would not have to surrender or destroy their property.

Unfortunately, our request for a preliminary injunction was denied by the District Court, so we appealed to the United States Court of Appeals for the Sixth Circuit. Because our request for an injunction was initially denied, the ban on bump stocks has taken effect.

GOA's attorneys participated in oral arguments in December, and we're awaiting the Appeals Court's ruling on our request for a preliminary injunction (to prevent further harm). While we can't speculate on what decision the court will make, GOA is committed to overturning this illegal, unconstitutional regulatory action.

In addition to fighting in court, GOA is fighting in the halls of Congress and State Capitols across the country to protect the right to keep and bear arms; we will not accept any restrictions on this enumerated right. Blue Press readers who would like to support our work can join GOA at a special rate by going to gunowners.org/BluePress.

We're Glad to See You're Back!!

The HMB Bolt

Young Manufacturing is the licensed manufacturer of the HMB bolt. The HMB Bolt by HM Defense eliminates the pass-through cam-pin hole and replaces it with a cam-pin socket and radiused cam-pin design. The new patented design eliminates the natural weak point of Mil-Spec bolts by significantly increasing the amount of metal (and strength) at the cam-pin location. The result: **NO MORE BROKEN BOLTS!** The HMB Bolt also reduces contact between cam pin and firing pin, enabling smoother operation of the firing pin, bolt lugs and aft gas rings. The new cam-pin socket also retains lubrication for extended operations. Comes with a phosphate cam pin.

HMB Bolt **P71-66680 \$99.99**

Young Manufacturing's **Upper Receiver Vice** holds any AR15 upper receiver regardless of the manufacturer. Since it supports the receiver from the inside, the outside dimensions are of no concern. Made from aircraft-grade 6061 T6 aluminum and anodized to MIL-A-8625 Type 3 Class 2.

YM Upper Receiver Vice

P71-66679 \$34.99

This tool makes it simple to remove or install a new ejector and spring into the AR-15 bolt. Anyone who has tried to do this without a tool will be amazed at the reduction in the number of cuss words needed to perform the task. Comes with alignment and roll pin punch.

The Thompson 1927A5 Semiauto Pistol *Continued From Page 43*

recovery for follow-up shots is long and annoying. Some users report that in extensive firing, the aluminum feed ramp takes a beating that a steel receiver could shrug off. With all the modern-day Thompson semiautos, the adjustable rear sight is somewhat cheesy, in no way comparable with the precision sights on the originals. Some owners choose to replace these newer sights with originals made by the Lyman Gun Sight Corporation in the early 1920s. These have become very sought-after and expensive when found.

The Thompson pistols are able to accommodate 50- and 100-round drum magazines as used on the original submachine guns. GI stick magazines of 20- and 30-round capacity can be used, but the locking hole in the front of the magazine must be extended upward with a file or a Dremel-type tool. It's cut-and-try, as each gun and magazine combination may be slightly different. This makes the hole appear oval and this makes a magazine no longer usable in Thompson submachine guns. Modifying the magazine release lever in order to use GI magazines is not recommended, as too much metal must be removed.

These Thompson pistols are the closest one can get

to having a gun comparable in appearance to the original submachine guns, unless one wants to shorten the barrel legally. This would make the gun shorter than 26 inches, requiring the payment of a tax and registration. Auto Ordnance was bought in recent years by Kahr Arms in Worcester, Massachusetts. Kahr currently makes another form of "pistol" with a 10.5-inch barrel that uses a horizontal foregrip. It just doesn't set the heart aflutter, though, like those grandfathered vertical grips. They also make some short-barreled semiautos, but they must be registered and a tax paid per the NFA. As a point of reference, no more full-auto Thompsons can be made; the only such guns that can be bought or transferred are now in existence and demand ever-spiraling prices.

Collectors of Thompson firearms really salivate when they find a nice-condition Model 1927A5 like the one illustrated. I've seen asking prices in the \$1,000 to \$1,500 price range, and even one optimistic owner was asking \$4,000 for an excellent one in the original box with papers.

These guns are still a lot of fun to admire and shoot, and they are quite nostalgic as near-replicas of the "Tommy guns" used during the roaring '20s!

Tactical Shotshell Strippers

California Competition Works' Tactical Strippers are available in four- or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with a belt clip that will accommodate up to a 2-1/4" duty belt.

The **HYSKORE Degreaser** consists of a 12" x 6" x 4-1/2" polypropylene tray with an angled drainage surface and a well with a perforated basket for holding and draining small parts. The set also includes a standard double-end nylon gun-cleaning brush. Small parts and even complete trigger groups and bolt assemblies can be placed in the basket and the well filled with solvent to cover the parts and left to soak for extended periods. Then the basket can be withdrawn, draining all the parts. The set includes a cover with an integral holder for the brush. This means the solvent that has been contaminated by the cleaning process can be left in the well of the Degreaser (rather than returned to the bottle) with the cover in place so that it's ready to be used for the next cleaning event. The tray, cover, and basket are made from polypropylene plastic. This has been proven to be impervious to all popular commercial cleaning solutions. It will also resist kerosene, acetone, and gasoline.

Slip 2000 Products

725 Gun Cleaner Degreaser should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE: To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.**

Slip 2000 **Carbon Killer** provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE: Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.**

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

P71-11652 \$25.99

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

P71-11676 \$19.99

Slip 2000 **Extreme Weapons Lubricant (EWL)** was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. P71-11644 \$18.99

4 Oz. P71-11645 \$18.99

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE: It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.**

4 Oz. P71-11646 \$11.99

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack P71-11674 \$14.99

TW25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

0.5 Oz. Syringe P71-15732 \$12.99
1.5 Ounces P71-15731 17.99

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it. Slide-Glide Standard is for use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard **P71-15571 \$7.99**
 Slide-Glide Lite **P71-15572 7.99**

Sweet's 7.62

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

Lyman X-Block Gunsmith Bench Block

Having the right tool for the job makes any gunsmithing project so much easier! Without the right tool, you may damage fine finishes or break parts. The **Lyman X-Block** is the right tool for anyone driving pins out of firearms. It has all the features to get the job done smoothly and professionally. The X-Block has both a "V" slot and a rounded slot running across the face of the block to support a variety of barrels and slides. The block is made of a tough, non-marring polymer, and edged with a softer non-slip outer overmold. The block has multiple holes to take on most any project, as well as a molded-in magnet on the back side of the block to catch pins and other small parts as they drop out. Its large 5" diameter provides a stable base with plenty of support.

P71-11390 \$15.99

NSSF: The National Shooting Sports Foundation

By Alan Korwin

What Is a Trade Association? Every industry has trade associations, it's only natural. When people in the same business face the same opportunities and problems, which they do, they seek each other out to talk. They look for economies of scale, help from (or against) government, whose long arms can be a benefit or burden. They do research together, compete for each other's employees, meet for drinks after work, play golf, even go shooting together and get to know their spouses. Trade associations are a really good thing. And natural.

The shooting sports are no different, though the subject matter – these days anyway – is politically charged. It wasn't always that way. Not so many years ago, firearms and shooting were cherished and highly respected. After making their way into the greatest document of human rights ever created, The U.S. Bill of Rights, Americans owned and constantly used these enjoyable implements of freedom, sustenance, survival and sport as commonly and routinely as pencils and paper, and equally lethal kitchen knives.

For most of history, edged weapons ("arms") caused way more havoc and slaughter than firearms. Society has become much more civil now that we've moved past the bloody era of the likes of Genghis Khan or Vlad the Impaler on a rampage. To be sure, evil still exists and must be reckoned with. Research shows that a crowded central metropolis of modern life festers with murderous miscreants responsible for the majority of crime statistics scaring us all. But without the power of guns for control, and their unique action at a distance, it's likely the spillover could exceed anything currently imaginable.

Arms manufacture rapidly became an industry as soon as its power to control the spread of crime and terror was recognized. Science quickly advanced the art and tactics of firearms, from the battlefield to the

wild frontiers of human endeavor. Eventually, it was again only natural that in America, with its protection of the right to arms, life, and self defense that the public would develop competitions, sport and large-scale businesses in a growing popular industry.

And so, the National Shooting Sports Foundation came to be in 1961, "to promote, protect and preserve hunting and the shooting sports," now representing 8,000 members in an industry serving the public.

Unlike well-known national membership societies, like the one constantly attacked by anti-gun "news" groups as "the most powerful lobby in Washington" (NRA is actually below 50th in terms of its spending), NSSF maintains a lower profile and is somewhat unknown outside industry circles, where it plays an important role.

Most prominent perhaps is NSSF's Shooting, Hunting and Outdoor Trade (SHOT) Show, held annually, which attracts 65,000 business people to its 13 miles of aisles at a Las Vegas convention center. Here, the very latest in gear, from waterproof boots to quarter-million-dollar Perazzi shotguns to night-vision optics and all-terrain vehicles are on display, for dealers to consider – that will soon show up at your local retailers.

Lately though, with all the political pressure brought to bear on the industry in general and gun owners in particular, the trade itself has found a serious need to step outside normal business-as-usual concerns and address the inventions of an agenda-driven "news" media, the vacuum of education now permeating our school systems, and socialist-communist inspired infiltration of American thought, arguing to disarm or sub-arm the public. These direct threats to The American Way <https://www.gunlaws.com/TheAmericanWay.htm> have pushed NSSF into directions unanticipated not long ago, including deep research projects and safety and crime prevention.

GUN OWNERS CARE

FIRST SHOTS
AN INTRODUCTION TO SHOOTING

Project ChildSafe

In place now for 20 years, and working with more than 9,000 other organizations, this NSSF program has increased awareness of safe gun-handling and storage techniques, distributed more than 38 million free gun locks, and works with law enforcement, fish and wildlife agencies, conservation groups, retailers, ranges, the faith community, even tribal organizations, Boy Scouts and more, to bring firearm accidents down to their lowest incident levels in history.

Operation Secure Store

While media and some anti-gun-rights groups simply complain about thieves stealing guns, NSSF partnered with BATFE (the Federal Bureau of Alcohol, Tobacco, Firearms and Explosives) to do something about it because, as former NSSF president and chief executive officer Stephen Sanetti said, "No one wants to prevent the theft of firearms more than the licensed retailers that sell them." Aside from training, information and regional seminars designed to help prevent thefts and enhance security in the first place, NSSF is effectively doubling reward money offered for information leading to the arrest and conviction of those responsible for thefts from licensed retailers.

Gun Owners Care

The very latest program, launched at the 2020 SHOT Show, this addresses the fact that decent American gun owners are increasingly the target of efforts to shame and cast aspersions on them simply for exercising their constitutional right to own a firearm. NSSF launched Gun Owners Care to educate the public about the concern law-abiding gun owners have for their neighbors and communities. Members of the firearms-owning community deserve respect for being good, concerned citizens and proud defenders of a unique American heritage, and the Gun Owners Care initiative is a plan to emphasize those efforts and successes.

Industry Research

The Atlanta-based Centers for Disease Control has been champing at the bit to conduct "gun-control research," their euphemism for anti-gun studies, if past politicized performance is a measure. That has been short-stopped through funding limits imposed by Congress. Real firearms research takes place privately by scholars, and routinely through the industry's NSSF efforts. Among its findings, hardly mentioned in mainstream media, is the fact that the shooting sports, based

on sales figures, is the number two participant sport in the nation, ahead of golf by \$1 billion per year (golf is number three, exercise is tops).

Part of media's gross deception is to feature front-page news about golf, and to only feature firearms when they are involved in crime, leading to a totally distorted public perception. Americans buy about nine billion rounds of ammo annually, for legitimate purposes. Regularly issued NSSF reports cover markets, ranges, hunting, reference guides, demographics, excise taxes, NICS figures, economics data, breakouts by state, support of the environment, habitat enhancements, a wealth of information you will never see in mainstream media's "unbiased" coverage of this second biggest sport in America.

More Activity Than We Can Cover

This trade association serves its industry, like any other one does. It is a great industry, without the great support any other business would receive from the press, so you and the public basically don't know about the work it does, and the wonderful things it provides this nation.

Missing from this brief report is coverage of SHOT University, the Where to Shoot, Where to Hunt and Where to Shop databases, the NSSF Hall of Fame, the controversial FixNICS program, the "Don't Lie for the Other Guy" campaign to stall straw purchasers, CMO Summit, Research articles and surveys, the eye-opening Secret Shopper program, the various membership levels for participants, Job opportunities postings (at jobs.nssf.org), numerous excellent trade publications, Wildlife Agency partnerships, Import/Export seminars (the firearms business has a major impact on international relations and trade), Compliance seminars and assistance for licensees (fake news is always falsely lamenting a lack of regulation in this highly regulated business), the First Shots program for new shooters, Range Support for ranges nationwide, Media Liaison for reporters who prefer to get and use facts instead of bogus propaganda and rumor, and of course Congressional representation for an industry constantly under attack – by forces of darkness cleverly disguised as functioning members of society.

Award-winning author Alan Korwin has written 14 books, 10 of them on gun law, and has advocated for gun rights for nearly three decades. See his work or reach him at GunLaws.com.

Bushnell TRS-25[^] Ultra Compact Red Dot Sight

Bushnell's Trophy TRS-25 Ultra Compact Red Dot Sight is designed for use on shotguns, handguns and rifles. It is constructed and assembled by highly skilled craftsmen to Bushnell's high quality standards. The precision and craftsmanship with which this scope was built ensures its performance under demanding conditions. This scope will provide the shooting accuracy and repeatability which have made Bushnell legendary. Features unlimited eye relief and a three-minute-of-angle dot.

TRS-25 (Includes riser, not pictured.) P71-31318 \$119.99

Scout Scope Mounts

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle	P71-25374	\$79.99
Scout Scope Mount for SKS Rifle	P71-25373	78.99

Blue Press 75

The Finnish M39

By Gus Cotey

They call their country “Suomi” and themselves the “suomalaiset.” We in the US know this country as Finland and its people as the Finns. This sparsely populated nation gained its independence from Russia in 1917. It has survived as an independent nation ever since, despite a civil war (1918), two invasions from the Soviet Union (the Winter War, 1939-1940 and the Continuation War, 1941-1944), and one conflict with Nazi Germany (the Lapland War, 1944-1945) despite previously assisting Finland in the two conflicts with the Soviets.

The Finns are known for meeting severe, dangerous events with a stoic stubborn determination, tenacity of purpose, and unwavering courage in the face of adversity despite great odds. Their word for this quality is “sisu” (see’-soo). Due to the vast wilderness regions of Finland, the Finns also have a great tradition of hunting, marksmanship, and woodsman skills that has served this nation well in contributing to the effective performance of their military personnel in thwarting invaders. Experienced skilled hardcore hunters tend to make good soldiers as the Greek philosopher Xenophon noted some 24 centuries ago.

The Finnish Model 1939 variant of the Mosin-Nagant turnbolt rifle represents the zenith in the development of this personal weapon platform. The development of this system had its start after the Finns gained their independence and found themselves in possession a large quantity of Mosin rifles from their own stores as well as acquisitions from other nations. A large percentage of these firearms were in various states of disrepair. At this time the Finnish land forces consisted of the Finnish Army (Suomen armeija) and the Finnish Civil Guard (Suojeluskunta), their version of a citizens’

militia force. Both entities valued individual rifle marksmanship and found their inventories of Mosin-Nagants to be wanting in refinements such as trigger pulls, sights, and inherent accuracy, especially with the poor condition of many of the weapons’ bores.

At first, the only rifle barrels the Finns could get in quantity for upgrading their rifles had groove diameters of 0.3082 to 0.3095 inch, making them more suitable for 0.308-0.309 inch diameter bullets as opposed to the 0.3105-0.311 inch diameter ones used in Russian/Soviet 7.62x54R ammo. This led to the development of the Finnish 7.62x53R cartridge, which used .309-caliber projectiles. Later on, the Finns modified the throats and chambers of their 7.62x53R rifles so that Soviet/Russian 7.62x54R L-type 148-gr. rifle ball and D-type 182-gr. heavy bullet machine gun ball ammo could be used safely in their rifles in the case of an eventual Soviet invasion, which they correctly perceived as imminent.

The Finnish Army and Civil Guard Mosin-based rifles evolved separately and differed somewhat from one another. The Finnish Army’s final organization-specific rifle was the M27; a 9-pound arm with a 27-inch barrel and straight stock. The Civil Guard’s final pattern rifle was the also straight-stocked M28/30 with an easily windage-adjustable front sight and improved rear sight. This rifle weighed 9.5 pounds due to its heavier barrel of the same length.

The M28/30 Civil Guard rifle was the model carried by a uniquely skilled and prodigiously courageous Finnish Civil Guard member by the name of Simo Häyhä; a master marksman, lifelong hunter, and outdoorsman who served as a sniper during the 1939-1940 Winter War against the Soviet invaders. In only 98 days, Simo managed to dispatch 542* Soviet soldiers – the world record for sniper kills – with his

The Finnish Model 1939 variant of the Mosin-Nagant turnbolt rifle represents the zenith in the development of this personal weapon platform.

iron-sighted 28/30 rifle and over 200 more with a caliber 9mm Parabellum (9x19) Suomi KP/-31 submachinegun until he was shot in the face with an explosive Russian 7.62x54R bullet. Despite sustaining a grievous and disfiguring injury requiring numerous surgeries, Simo survived and spent most of the rest of his life as a hunting guide and hunting dog breeder. He lived to the ripe old age of 96.

Simo Häyhä most definitely possessed an uncommonly great measure of *sisu*! His expert hunting skills, marksmanship, and fieldcraft served him well, earning him the nickname given him by his enemies, "White Death." Xenophon would have been proud.

The M39 rifle was developed as the result of the Finnish military's desire to have one standard rifle for both the Finnish Army and Civil Guard. The final product featured a semi-pistol grip stock (a few early models had straight stocks), 27-inch barrel, and weight of 9.5 pounds. The rifle was provided with same type of windage-adjustable front sight and superior open rear sight as the M28/30. The stock was built more stoutly for increased strength, but the barrel was slightly thinner than that of the M28/30 to keep the gun's weight from exceeding 9.5 pounds. The nominal groove diameter was increased to 0.310 inch and the twist rate of its 4-groove RH twist bore was changed from the traditional Russian/Soviet 1 turn in 9.45 inches to 1 in 10 inches. This model of Finnish service rifle never saw action during the 1939-40 Winter War, as only 10 copies were built by then, but did see use during the latter two conflicts.

The rear sight on the M39 is interesting in that it is both a tangent type and ladder type in one package. With the rear sight leaf in the down position, the elevation adjustment slide can be moved forward to elevate the point of impact to the desired range from 150 to 1,000 meters. For longer distances, the rear sight leaf is flipped forward towards the muzzle, thereby becoming a ladder sight with a scale from 1,200 to 2,000 meters.

For additional precision, there are added grooves between the numbered range settings allowing for fine-tuning the point of impact to a remarkable degree.

Using the windage adjustment on the M39 front sight is an exercise in practical simplicity. To make a horizontal impact point adjustment, one first loosens the slotted setscrew on the right-hand side of the front sight base. Turning the windage adjustment screw on the left-hand side clockwise moves the shot grouping to the left and turning it counterclockwise moves it to the right. There are 8 dots embossed into the front sight base surrounding the windage adjustment screw allowing for precise zeroing. Immediately after the adjustment is made, the setscrew on the right-hand side is then tightened.

When Finnish Mosin rifles like the M39 were assembled, the various component parts of the action that could be salvaged from older Mosin rifles were used, explaining why these rifles characteristically don't have matching serial numbers. Certain parts such as the magazine, magazine follower, extractor, interrupter/ejector, and trigger components were either modified or built from scratch to higher Finnish standards of functionality and reliability. Finnish M39 Mosin extractors, by the way, are distinguishable from their Russian/Soviet-made counterparts by their plum-colored surfaces as the result of heat treating. On many Finnish Mosin rifles, the major bolt components exhibit pitting due to their previous exposure to harsh conditions. Nearly all Finnish Mosins have the older style polygonal receivers commonly referred to as hex-type. In actuality, their profile is an interrupted octagon.

The rear sight increments on the M39 are set up for use with the later developed Finnish D166 7.62x53R load that featured a 0.310 inch diameter 200-gr. FMJBT spitzer bullet and a muzzle velocity of 2,300 fps from a 27-inch barrel. This round was intended to provide superior long range performance in both rifles and machineguns; especially the latter. It is also the load

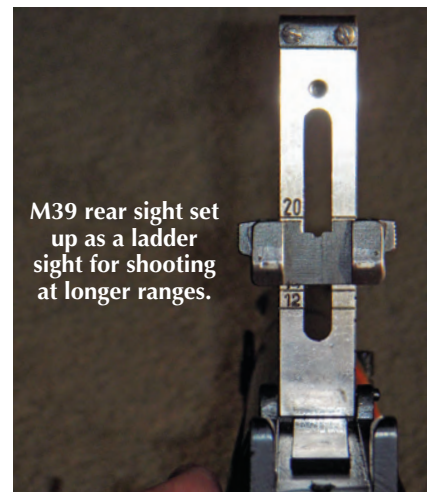

M39 rifles are equipped with two sets of sling swivels; the bottom-mounted ones for infantry soldiers and the side-mounted ones for ski and bicycle troops.

Side view of M39 rear sight showing the finetuning increments between range scale numbers. Note also the factory repair of flaw in the wood via three hardwood dowel plugs.

Top view of the M39 rear sight set up as a tangent sight.

M39 rear sight set up as a ladder sight for shooting at longer ranges.

used by the intrepid Simo Häyhä in his M28/30 to wreak horrendous havoc upon his Soviet foes.

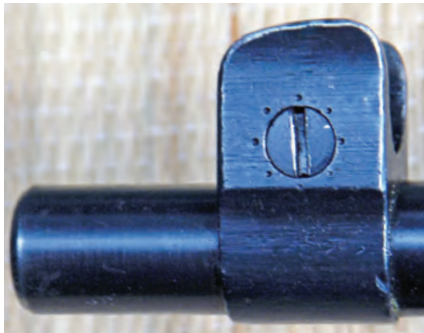

Most M39s have the letter "D" stamped on their barrel shanks, indicating that they are set up to use D166 ammo as well as all captured Russian/Soviet 7.62x54R ammo. Some of these rifles also have their barrel shanks stamped with a "B" showing that they are of Belgian manufacture.

The full-length stock of the M39 consists of two sections glued together in the location of the forearm portion via interlocking splicing fingers; a feature also present on the M28/30 Civil Guard rifle. These were initially triangular with rounded tips, followed by more numerous thinner ones with flat tips. Post WWII splicing fingers are rectangular. The purpose of this two-piece arrangement is stability under varying, extreme climactic conditions. The stock finish on M39s is a non-reflective oil finish, which is in contrast to the glossy lacquer finish found on the stocks of Russian/Soviet Mosin Nagant rifles. M39s have both under-mounted

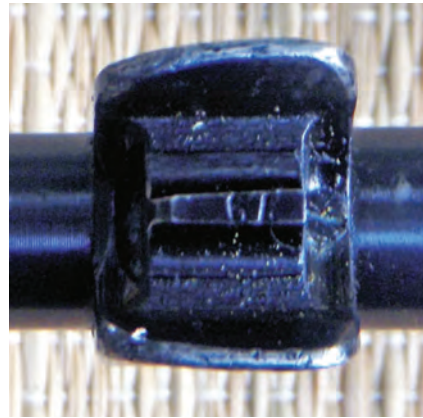

and side-mounted sling swivels so as to be suitable for infantry as well as ski and bicycle-mounted troops.

My personal M39 is a joy to shoot, often turning out 100-yard 5-shot groups of 2 inches or less from a rest with good ammo. Its bore is in perfect condition and its countersunk crown is sharp and undamaged; a good indication that its former users practiced proper gun hygiene. The rifle's 7-pound trigger pull is a bit heavy for my taste, but very crisp. This gun's barrel is stamped with "D" as well as its date of manufacture (1944) its maker VKT (Valtion Kivääritehdas, or State Rifle Factory), its serial number, and "SA" for Finnish Army. Rifles issued to the Finnish Civil Guard are stamped "Sk.Y" for Suojeluskuntain Yliesikunta (General Headquarters of the Suojeluskunta or Civil Guard). The receiver is engraved with the same serial number as on the barrel shank by the importer so as to comply with US Federal law.

My M39 has been arsenal reconditioned and had its stock replaced as evident by its rectangular stock fore-

The left-hand side of the M39 front sight assembly. Note dots embossed into the front sight base surrounding the windage adjustment screw allowing for precise zeroing.

Top view of the M39 front sight assembly.

M39 actions were pieced together from a multiple rifles from multiple sources. The bolt handle here has a pre-1928 Tula Arsenal mark, while the bolt connector and cocking piece are stamped with the triangular Izhevsk Mechanical Plant mark. Note pitting on bolt which is common on Finnish Mosin rifles.

arm splicing fingers. Also, my stock has two thin laminated parallel reinforcing strips installed into the butt which run from heel to toe; a modification that was started in the mid 1950s. A knot or other imperfection in the stock's wood was expertly corrected at the factory by gluing in hardwood dowel plugs prior to final shaping and finishing. To my eyes, the resulting pattern change looks cool.

The bolt assembly of my M39 has a bolt body stamped on its handle portion with a T-shaped hammer insignia of Russia's Tula Arsenal (pre-1928), while the bolt connector and cocking piece are stamped with the arrow surrounded by a triangle insignia of the Izhevsk Mechanical Plant. The bolt head has a dull, frosted finish most likely due to shot peening; a process whereby a metal component's surface is impacted by numerous tiny metal spheres impelled by compressed air in order to peen over any microscopic cracks or stress risers that could cause catastrophic failures later on.

Finnish M39 rifles are becoming rarer as time goes

on. Also rare are original Finnish rifle accessories such as cleaning kits, issue screwdrivers, and especially, authentic bayonets. One curious M39 accessory is a blank-firing adapter for preventing injuries during wargames.

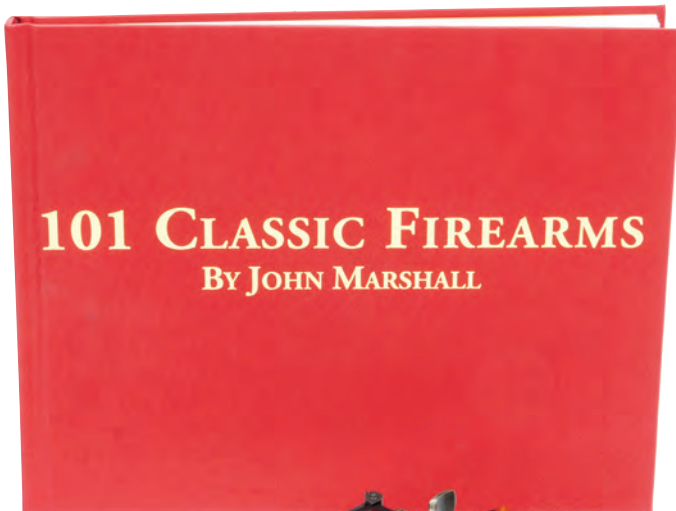

The Finnish M39 soldiered on as Finland's front line service rifle until it was replaced by the caliber 7.62x39mm selective fire AK (Avtomat Kalashnikova) based assault rifle, the Rk 62 (Rynnäkökivääri 62, or Assault Rifle 62) in 1965. While most M39 manufacture ceased in 1945, some additional production resumed from the late 60s to the early 70s for training and competition purposes. It stands as the pinnacle of the Mosin-Nagant rifle platform and does justice to the soldiers of great *sisu* who intrepidly defended their homeland of Finland from formidable invaders against all odds.

Individual First Aid Kits From The Tactical Medic

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why we're offering individual first aid kits from The Tactical Medic. The Econo-IFAK contains a 4" Emergency Bandage, a TK-4 Combat Tourniquet, 1 Package of Rolled Gauze, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves. The Micro Kit #2 contains a 4" Pressure Bandage, 1 Package of Quick Clot Gauze, a TK-4 Combat Tourniquet, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves.

- Econo-IFAK (at right in photo) **P71-43379** **\$19.99**
- Micro Kit #2 (at left in photo) **P71-43378** **\$39.99**

⚠ WARNING: The products offered for sale in this catalog can expose you to chemicals, including Lead, which are known to the State of California to cause cancer, birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

Wise Company's "Grab & Go" Emergency Food Kits

Wise Company's **18 Wise Favorites 72-Hour Kit** includes six entrées and three breakfast meals, each individually packaged for a total of 18 servings (2 servings per pouch). Entrées include meat. Packages included have a shelf life of 7 years compared to those in our buckets with a shelf life of 25 years. Great for hunting, camping and hiking! Simple to prepare, just add boiling water directly into pouch.

\$49.99

kershaw® TRUST YOURSELF. TRUST YOUR TOOLS. BE READY FOR EVERYTHING.

From clearing brush to making kindling, the Camp 10 is the ideal outdoor and survival tool. Cut, slash, hack, split, scrape – just about any task you ask of it, the Camp 10 can handle. The full-tang Camp 10 is made of carbon tool steel for toughness and wear resistance. A basic black powdercoat protects the steel and makes maintenance

easier. You'll like the secure, contoured grip of the Camp 10, too. The handle has a built-in hand guard and is drilled in both front and rear so you can attach a lanyard either place – or both – for carrying versatility.

Blade length: 10" Overall Length 16" Weight, with Sheath 1 lb. 8 oz.
P71-55012 \$80.99

Military knives have a lot of history and a lot of fans. Yet they tend to be bulky for everyday carrying and use. Kershaw and custom knifemaker Les George offer a solution by taking inspiration from a U.S. World War II knife design and turning it into the XCOM folder.

Blade length: 3.6" Closed: 4.4" Open: 8"
P71-55009 \$49.99

The Kershaw Faultline is the one you add to your truck box, toss in your go-bag, or slip into the pocket of your tactical pants. Everything about it says, "practical, reliable, and sturdy." Made of quality 8Cr13MoV stainless steel.

Blade length: 3" Closed: 4" Open: 7"
P71-55011 \$46.99

Kershaw Volt II opens one-handed and with an authoritative "twack" thanks to Kershaw's SpeedSafe® assisted opening system. A simple pull back on the flipper and the Volt II opens smoothly and easily.

Blade length: 3.25" Closed: 3.9" Open: 7.1"
P71-66698 \$55.99

The Kershaw Method opens quickly, easily, and manually with Kershaw's KVT ball-bearing system and a built-in flipper. The handle is black – of course. The G10 handle features an unusual machined pattern reminiscent of an architectural truss.

Blade length: 3" Closed: 4.25" Open: 7.25"
P71-66700 \$39.99
