DROP-IN TRIGGER SYSTEM

- Fits most quality in-spec 1911s and 2011s
- Trigger pull: 3.5 - 3.75 lbs (will vary based on your mainspring weight)

Which Dillon is Right for YOU?

Page 28

Square Deal B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W Long to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 24

RL 550C

The World's Most Versatile Reloader, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 750

Truly the state of the art, our XL 750 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular automatic pistol and rifle calibers.

Page 16

Super 1050

Our highest-production-rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

Page 12

RL 1100

Our newest reloader features an innovative eccentric bearing drive system that means smoother operation with less effort, along with an upgraded primer pocket swager. Loads up to .308 Win./7.62x51 cartridges.

ATTENTION DILLON CUSTOMERS: Because of changes to California's Proposition 65 that took effect on August 30, 2018, companies doing business in California are mandated to provide warnings on products that may expose Californians to any one or more of a list of approximately 900 chemicals, including Lead, which are "known to the State of California to cause cancer, birth defects or other reproductive harm." The new regulation states that a warning must be "provided in the catalog in a manner that clearly associates it with the item being purchased." Though we have no reason to believe our products could cause harm when used as intended, we now include the appropriate Proposition 65 warnings on some of our products to meet the California "safe harbor" requirements.

Dillon's Bill of Rights for Reloaders

All of Dillon Precision's customers have certain inalienable rights when they buy a reloading product:

1. Right of Quality – YOU THE CUSTOMER have the right to expect a well-designed product, manufactured with quality materials and workmanship that does what the seller claims it will do.

2. Right to Test and Send-Back – YOU THE CUSTOMER should have the right to test the product on your own reloading bench for at least 30 days, and if it does not live up to your expectations, send it back for a full refund.

3. Right of Service – YOU THE CUSTOMER have the right to free, friendly, expert service and technical advice available through a toll-free phone number. This service should include prompt replacement of broken or bad parts – free of charge.

4. Right of Warranty – YOU THE CUSTOMER have the right to a lifetime warranty on any non-commercial-grade reloading product you purchase. *Unfortunately, we can't offer this warranty on textile products and electrical or electronic components.*

5. Right to be Heard – YOU THE CUSTOMER should have the right to speak to someone of authority anytime you can't get satisfaction through normal channels. If our sales representatives aren't able to help you, our supervisors have a mandate to take customer-satisfaction issues all the way to the owner of the company if necessary.

Editor's Note: The Bill of Rights for Reloaders is Dillon Precision Products' customer-satisfaction policy. It remains very much unchanged from the day the company was founded. The disclaimer about textile products and electrical or electronic components reflects the reality of how those products are produced in today's world. Ultimately, our founder recognized that satisfied customers are our best advertising, and the only thing that differentiated his company from all the others at the time was the warranty and customer service he offered. We constantly strive to live up to his standards. Please let us know if we're not succeeding.

DILLON

HP1 Electronic Hearing Protector

- Protection Rating NRR 21
- External battery compartment
- Auto shut off extends battery life
- Extra-deep, replaceable ear pads
- Separate volume controls for each ear
- TRUE stereophonic sound
- Collapsible for ease of storage
- One-year warranty on electronics

Dillon's HP1 Electronic Hearing Protector amplifies weak sounds while at the same time blocking out loud, harmful noise. During loud noises, the HP1 maintains a comfortable level of sound transmission – HP1 Hearing Protectors are designed to never completely shut off. The Dillon HP2 Folding Hearing Protector is comfortable to wear for extended periods and folds for easy storage when not in use.

CP 2000^A

Dillon's First DEDICATED Case-Processing Machine!

- Eccentric Roller Bearing Drive System
- Smoother Operation, Less Effort
- Higher Throughput, Lower Cost Per Case
- Heavier Frame for Greater Rigidity
- Seven Threaded Stations for More Flexibility
- Upgraded Primer Pocket Swager
- Primer Pocket Swage Available in Two Stations
- User-Replaceable Swage Rod Tip
- Reinforced Toolhead Bolt & Washer
- Improved Shellplate Indexing System
- Processing Speed up to 2000 Cases Per Hour

Designed to complement our RL 1100 and Super 1050, the CP 2000 offers higher speed, greater versatility and added case processing capability...all at a much lower cost than dedicating a RELOADING machine to prep brass! If you're loading mass quantities of ammo, the CP 2000 will make your task MUCH easier.

Rapid Trim 1500 Case Trimmer[^]

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer **P78-62164** is **\$349.99**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (see chart below). Replacement carbide cutting blades, **P78-13141**, are **\$20.99** each. Upper lock rings, **P78-13559**, are **\$6.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Reel in Recoil

Five Top Tips to Manage Recoil

By Maureen P. Sangiorgio – NRA-Certified
Firearm Instructor/Range Safety Officer

When I first met the woman at a party, she seemed the calm and composed type. She was a friend of the hostess, and as we were chatting, she asked what I did for a living. I told her I write magazine articles during the week and give private firearm lessons on the weekend. She squealed with delight and immediately hired me to teach her how to shoot a new handgun her husband gave her for her birthday.

At the range, I found out she had zero shooting experience. She seemed a bit nervous, so I suggested she start with my Ruger Mark III Hunter .22. It's a heavy gun, with very manageable recoil. She refused, and insisted I teach her how to shoot her gun, which

was a subcompact Ruger 9 mm. So I positioned the gun in her hand, checked her grip, her stance, and told her to squeeze the trigger. BAM! Right after that first shot, reacting to the recoil, she ran around in circles, screaming, flailing the gun around, and ran to her car! Lesson over.

The way I see it, a few mistakes happened here. First, since she had zero firearm experience, her husband should not have given her a small 9mm handgun for a gift. Granted, they conceal better, but small, lightweight guns kick more, plain and simple. Second, she should have taken several lessons to work her way up from a .22 to the 9mm. Third, the student should have followed her instructor's instructions!

What is Recoil?

Recoil is the backward movement of a gun when it is discharged. Every time you squeeze that trigger, it

causes an explosion that results in the bullet zooming through the barrel and bursting out of the muzzle at a tremendous speed. When the bullet breaks free of the gun, the force of that action creates a flip of the muzzle as well as a backward thrust, or recoil.

Recoil is determined by two factors – the size and energy of the ammo, and the size and weight of the gun. “If the bullet is traveling quickly in one direction, it’s going to cause the mass it came out of to go in the opposite direction,” says professional 3-gun shooter Dianna Muller. Newton knew this back in 1687 – for every action, there is an equal and opposite reaction.

Five Top Tips

Whether you’re just starting out shooting, or have already purchased a firearm that has too much recoil for you, follow these tips to learn how to manage recoil in handguns, rifles, and shotguns.

1. Consider caliber. Whether it’s a rifle or handgun, a .22 firearm loaded with .22 ammo will produce the least amount of recoil and muzzle flip. Once your target groups improve (your cluster should be no larger than your fist), you’re ready to move up in caliber.

Regarding shotguns, Zach Snow, spokesperson for the National Shooting Sports Foundation (NSSF), recommends opting for a semiautomatic 20 gauge. “A semiautomatic shotgun will take some of that recoil out for the beginner shooter,” says Snow. Semiautos have a gas operating system that reduces felt recoil by prolonging the action stroke.

As a first shotgun, a single-barrel .410-bore model is perfect for young shooters because it has the lightest felt recoil of all shotguns.

2. Choose a heavier gun. “The biggest mistake I see people make when looking for minimal recoil is to think the smaller the gun, the better off I will be,” says Dianna. “The exact opposite is true. A full-size, heavy gun has more mass to help absorb that recoil and offset the effects of that explosion than a small, lightweight, compact gun.”

Some semiauto shotguns are equipped with a synthetic stock, which can be lighter than other materials. “In that case, if you are experiencing uncomfortable recoil, consider adding some weight within the stock and forend,” suggests Snow. “If you need help with this, talk with an instructor or the manager at your local range or gun shop. You can also go see a gunsmith to have them add some weight to the gun while maintaining its balance.”

To give you some idea how much difference a heavier gun makes in terms of reducing recoil, the NRA tested various rifles (same manufacturer) chambered in 30-06. They tested four guns weighing 6, 7, 8 and 9 pounds each. Their recoil energies were 26, 23, 20 and 18 foot-pounds respectively.

3. Pick the right ammo. All ammo, even of the same caliber, is not created equal! There are two main types of ammo: target and self-defense. Ammo used for target practice at the range will have the letters “FMJ” on it, which means full-metal jacket. FMJ has less recoil than hollow points, or HP. “Ammo that is more expensive, has the word ‘defensive’ or the letters HP on the box, will be hotter and have more felt recoil,” says Dianna.

Also check the bullet weight (in grains) on the box – the higher the number, the heavier the bullet, and the greater the recoil. Beginners should avoid boxes marked “+P” or “+P+” regardless of the bullet weight listed.

4. Check your stance. Be sure to lean forward, putting more weight on either your left or right front leg, whichever feels more comfortable for you. Your feet should be spaced apart with one in front of the other. Leaning forward, with your knee slightly bent, will help absorb some of the recoil because you will have better balance. You don’t want your back in a backward arch leaning out over your heels. Think “nose over toes” for a very positive center of gravity.

“One of the key ingredients to becoming an accurate shooter is how the shooter stands when firing,” notes Dianna. “If the shooter is leaning back, they’re going to feel more recoil. Most shooters find it’s best to lean forward on the left leg if they’re right handed, or lean forward on the right leg if they’re left-handed.”

5. Get a GRIP! “A proper grip will counter the effects of recoil,” says Dianna. When I was learning to shoot, I was blessed to have a variety of instructors – some of them were veterans, and others were retired police officers. They all taught me to grip a handgun very firmly, and make sure there is no space between my fingers, or between my hands when gripping the pistol.

For handguns, pick up the pistol behind the muzzle with your support hand. Then, with your strong hand, make a “Y” of your thumb and fingers. Place your strong hand on the firearm so that the web is centered along the high back of the back strap. This is the biggest mistake I see my students make. Their hand is too far down the back strap. Keep your finger straight and off the trigger.

Next, bring the support hand in to play and press your support-hand fingers into the palm on your strong hand. Then make sure the thumbs are pointed straight, parallel to the slide or barrel. For semiautos, the support-hand thumb should lie directly forward of and below the strong-hand thumb. For revolvers, the support-hand thumb is positioned over the strong-hand thumb.

You can also exercise with various types of fitness equipment to build up forearm and wrist strength. Squeeze a tennis ball or grippers in front of TV at night. Another tip is to do reverse curls, and to use rubber bands of different strengths to spread the fingers apart.

Case Preparation Equipment

Vibratory Case Cleaners Case/Media Separators

CM-2000 Case/Media Separator [^] P78-20675 \$81.99
 CM-500 Case/Media Separator [^] P78-21045 \$49.99

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is one of the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour. Not only is our capacity greater than most, but our motor is also larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine! The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media. We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners. The solution was an injection molded reversible part. Simple, and it works

great. Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench. It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit. Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

CV-2001 [^] , US 110v	P78-20493	\$199.99

Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290
 8 oz. bottle. P78-13804 \$9.99
 Case (20 pc.) P78-20255 149.99

Dillon's **D.C.L.** non-aerosol case lube is easy to use. Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

8 oz. bottle P78-13733 \$14.99
 Case (20 pc.) P78-20256 209.99

 Case (20 pc.) P78-21375 \$179.99

Don't Forget Polishing Media!

Crushed walnut hull polishing media quickly cleans even the dirtiest of cases and is the best solution for badly tarnished, range-pick-up brass.

15-pound bag P78-13287 \$23.99

Ground corn cob polishing media is the best there is for that final polish. Leaves your brass looking better than factory new!

10-pound bag P78-13496 \$15.99

PRIMER FLIP TRAY

A heavy, high-quality tray large enough for the Federal primer package. **P78-13606, \$23.99 ea.**

Dillon Die Sets

Sizing/Depriming Die (Pistol)

Our sizing/depriming dies feature a “floating decap assembly” with a snap spring that throws the spent primer off the pin and eliminates the primer “draw back” that often occurs when decapping military brass. The primary feature of Dillon’s size die design is the long, tapered carbide ring with a radiused opening. That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that’s still only a part of the story.

Bullet Seating Die (Pistol)

Our quick-disassembly seat die allows the user to disassemble and clean the seating die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We’ve incorporated a “flip-flop” seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem. Dillon’s double-ended design makes it simple to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time.

Crimp Die (Pistol)

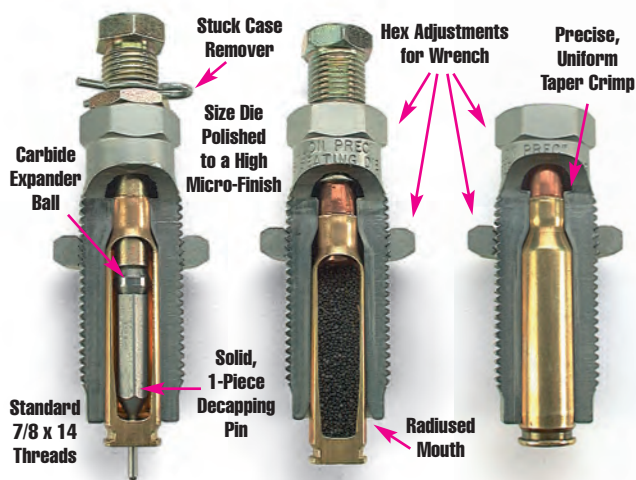

We’ve made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you’ll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

---------------	-----------	--------

Sizing/Depriming Die (Rifle)

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for “squeak-free,” effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die (Rifle)

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die (Rifle)

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today’s marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Mr. Bulletfeeder®

by Double-Alpha

Mr. Bulletfeeder has been around for some years now, and has gained a huge following worldwide. The patented system is by far the best performing personal-use bullet feeder on the market, and has been, since its introduction in 2006. Double-Alpha Academy has teamed up with RAK Systems, the original designer and patent holder of the system, to redesign and streamline the product, making it more compact, more versatile, better looking and more affordable than ever before.

The Mr. Bulletfeeder by Double-Alpha is now a production-grade product, with Double-Alpha Academy – a world leader in practical-shooting-related product manufacturing and distribution – at the helm. The design allows the bullet collar to be mounted onto the casefeeder, eliminating any increased footprint and space use, and the new patent-pending dropper is a huge step forward in design, durability and reliability.

Christian Sailer @christian.sailer.shooting

1. First gun you ever fired?

Christian: First, a Red Ryder BB Gun, then Grandpa's single shot bolt action .22 LR and then a Walther P22.

Gianni: The first gun I ever fired was when I was three years old, it was a Chipmunk .22 LR.

2. What's your favorite gun?

Christian: My Infinity Firearms IMM Style Open Pistol! I have a matching set that has won a ton of matches!

Gianni: My Infinity Firearms .40 Cal. Sight Tracker Limited Gun. It is an amazing gun, it shoots extremely flat.

3. Do you have any rituals before you shoot?

Christian: I wake up, take a cold shower, stretch, dryfire, and then head to the range. Driving the morning that I shoot is a must to help speed up my eyes and wake up. Once on the range I get my gear situated, crack off a few practice shots (if allowed), and then get in the zone!

Get 2

Gianni: At major matches before any stage I clear my head and only focus on that stage. I pretend that I'm the only one on that stage.

4. How many rounds a year do you shoot on average?

Christian: 20-30k, this year was the most. The previous years have all been 10-20k.

Gianni: Between 40-50 thousand rounds.

5. Most useless thing you own?

Christian: My back-up gun because my primary never gives out.

Gianni: My Irish Jack Russell. He's always getting into trouble.

6. What else do you do for fun?

Christian: When I'm not doing schoolwork, shooting, planning/shooting matches and classes, I like to be around family and friends.

Gianni: I have a Haas CNC milling machine that has been a blast. My friend Eric Steiner and I have a business making accessories for the shooting sports and are continually trying to grow the business.

7. Favorite place on Earth?

Christian: It's more about the people than the place, but I love Maui, Hawaii.

Gianni: Haines, Alaska. It's a small town outside of Skagway. It's such a beautiful place and there's great fishing!

Christian Sailer

Know

8. Most annoying thing about you?

Christian: I'm quite detail oriented and organized, so things have to be done perfectly to keep me happy.

Gianni: I leave orange juice jugs with a few drops left in the fridge to aggravate my parents.

9. Craziest thing you've ever done?

Christian: Attempted a backflip on a standup jet ski.

Gianni: I used to race NHRA Junior Dragsters at the age of seven. They ran on alcohol and ran 1/8 of a mile at 75 mph.

10. Dream job?

Christian: Become the CEO of a shooting company.

Gianni: Owning a huge CNC manufacturing company.

11. Who has inspired you the most?

Christian: My hardworking parents in life and Max Michel in shooting.

Gianni: JJ Racaza. He's a very successful person and always has a smile on his face. He's a great person that I look up to.

12. Who would play you in a movie?

Christian: Keanu Reeves as "John Wick" or Mel Gibson as Benjamin Martin in "The Patriot".

Gianni: Chris Pine.

Gianni Giordano @gianni.giordano.shooting

13. If you could have a conversation with anyone from the past, who would it be?

Christian: John Moses Browning.

Gianni: King Arthur.

14. Who's in your regular crew?

Christian: My Pacific Northwest family has my back and I enjoy shooting there the most. I grew up in a great shooting community and my local friends know who they are. My University of Washington fraternity brothers have my back in everything and nicknamed me "Shoota!"

Gianni: Eric Steiner, Mike O'Leary, Chris Clark, Dan Hawkens. And my awesome father Giovanni.

15. Words to live by?

Christian: If you aren't first, you're last.

Gianni: Don't let people tell you the sky's the limit, when there are footprints on the moon! Never give up on your dreams.

Gianni Giordano

BL 550[^]

Dillon's Basic Loader

\$299⁹⁹

P78-15399

Reloading Dies and Caliber Conversions sold separately

Pictured with optional accessories:

Strong Mount P78-22051 \$59.99

Dillon's RL 550 has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of

versatility for the shooter/hunter who needs to feed several rifles. The BL 550 is essentially an RL 550 without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550 – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550 loader! The interchangeable toolhead (Page 25) makes it quick, easy and inexpensive to change calibers. The additional toolheads are \$27.99 each, or \$25.99 each if you

buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them. A powder measure adapter is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

AUTO PRIME SYSTEM[^] P78-16627 \$94.99

PRIMER SYSTEM EARLY WARNING[^]

Allows you to focus on loading instead of worrying about failing to seat a primer, and is an easy slip-on attachment to the auto prime system. P78-20302 \$29.99

AUTO POWDER SYSTEM[^]

Accurate to within 0.1 grain, our Automatic Powder Measure is world renowned for its charge-to-charge consistency. P78-20251 \$99.99

OPTIONAL MAGNUM RIFLE POWDER BAR

Dillon Reloading Accessories

A Strong Mount increases your machine's "footprint" to over 10", spreading the load over the whole bench instead of stressing the leading edge. For XL 750/650 owners with limited overhead clearance, the XL 750/650-only mount raises the machine 6" above the bench top. All mounts come

with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

RL 550/XL 750/650	P78-22051	\$59.99
XL 750/650-only	P78-22052	57.99
"SDB"	P78-22223	72.99

Our Bullet Tray is a simple, shallow aluminum tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550 and XL 750/650 when equipped with the RL 550/750/650 Strong Mount, and a separate kit is available for the RL/Super 1050.

Bullet Tray Kit	P78-22214	\$47.99
1050 Tray Kit	P78-22215	47.99

The Low Powder Sensor provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	P78-16306	\$44.99
--	------------------	----------------

Our Toolholders are available for your reloading machine and ensure that the tools you need to service your reloader are handy and organized. No more digging around your bench trying to find the right size hex wrench!

"D-TERMINATOR" Electronic Scale

- 1500 grain/100 gram capacity
- Accurate to 0.1 grain/0.01 gram
- Uses four AA batteries (included)
- Comes with its own AC adapter
- 100g scale check weight included

NOTE: Dillon electronic scales are covered by a one-year warranty from date of purchase.

\$139.99
P78-10483

Dillon's **"Belted Magnum" Powder System** features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

P78-97126 \$169.99

"ELIMINATOR" Balance-Beam Scale

\$89.99
P78-13480

The **Powdercheck System** (available for XL 750/650 and Super 1050 reloading machines) sounds an alarm if the powder charge in a round is out of limits either high or low.

P78-21044, \$71.99 each
Three or more, \$65.99 ea.

An **Aluminum Roller Handle** gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

P78-19972 \$39.99

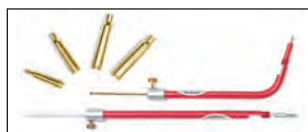

Berry's Mfg. Bullet Puller[^]

Nobody's perfect. A bullet puller makes it easy to recover all your components.

Lyman Products

Lyman's Precision Funnel Set is the ideal system for the serious reloader. The Precision Funnel Set is made to be completely static free, with a body of die-cast aluminum and precision-turned aluminum inserts. This is no "one size fits all" funnel; the Precision Funnel Set uses precision-machined, caliber-specific inserts to properly fit the case neck. The inserts can be quickly and easily installed by simply pushing them into place and then pulling them out when changing calibers. The Precision Funnel Set also comes with a padded storage case that neatly stores extra inserts when not in use. The set includes inserts for .22, .243/6mm, .25/6.5mm, .270/7mm, .30 and .338 caliber rifle cartridges.

P78-11389 \$39.99

The Lyman Scale Weight Check Set enables you to check/calibrate your scale using known weights. Weight Set .5 - 210.5 Gr.

Lyman Neck Expander Die

Improves accuracy of cast and jacketed bullet reloads. Extends case life. A "Must-Have" die for the cast bullet or flat-base bullet user. The first step expands the inside of the case neck to just under bullet diameter for precise case neck tension in the finished reload. The second step expands the case mouth to bullet diameter or slightly over. This allows the jacketed or cast bullet to be started perfectly centered in the case mouth and properly aligned with

the axis of the case neck. By adjusting the plug slightly deeper, the second step also provides a slight flaring of the case mouth for reloaders using cast bullets.

AMMO BOXES ARE COVERED BY DILLON'S LIFETIME WARRANTY

Dillon AkroBins[^]

AkroBins are ideal for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550/XL 650/750 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Christian Sailer:

By Connie Bowlby

Since 2015, when I started this journey into competition shooting, I continue to be amazed by the opportunities that seem to pop up in my life. Andrew and I got the chance through a mutual friend to meet Christian Sailer. Christian is the 2019 United States Practical Shooting Association (USPSA) Men's Open National Champion.

At 19, he's the youngest shooter to win the USPSA Nationals, and the first person to win all eight USPSA area championships and Nationals in the same year. I've heard other shooters talk about him as a skilled competitor. Beyond that, I didn't know what to expect but I was super excited to meet him. Turns out, he is a warm, friendly, respectful, and down-to-earth kid. I hesitate to say kid because he's mature beyond his years and already has master-level knowledge and ability most of us will never attain. With that said, he's yet to turn 20 and there's a focus and intensity about him. How could there not be, considering what he's accomplished? He could easily take himself too seriously, but there's not a hint of ego. We were lucky enough to get the chance to spend a day with him at the range.

Andrew and I, along with a couple of friends, met at the range early to help set up, but Christian explained we would be doing everything with just four targets. So, with not much to set up, we started the morning with friendly conversation. As Christian shared his out-

line and goals for the day with us, I noticed the Dillon Precision sponsorship logo on his TECHWEAR USA jersey. It was fun to share our experiences using Dillon reloaders: Andrew has the Dillon RL 550B, I have a Square Deal B and Christian has a Super 1050. Christian talked about being at the Dillon booth at SHOT Show, Andrew and I commiserated about not being able to attend SHOT Show this year.

Christian's initial focus was on the fundamentals of grip, draw and trigger control. That may sound boring, but consistent practice of the proper fundamentals will get you consistent results. At a high level of competition, consistency wins matches. Christian puts in the time with dryfire and live fire range practice sessions to maintain that consistency. He breaks everything down, if you practice the different types of shots and movement you will find in a USPSA stage, hopefully, you'll limit the times you are unprepared as you step up to make ready.

I've since watched several videos from Christian's Instagram page and the consistent theme throughout is confidence. Christian is a confident shooter, he trusts his ability and he's exceptional at calling his shots. He talked about how much work he put into developing that skill. In a USPSA *FrontSight* article from November/December of 2019, Christian said, "You get out what you put in." He recommends analyzing your videos from matches, as you'll be able to pick out spe-

Training With The Champion!

cific things you do of which you may not be aware. Once you see what needs correcting, you can isolate that area and remove it or improve it while potentially saving valuable time on a stage.

As we practiced draws, I realized because of the way my holster is connected to my competition belt, there was very little room for my thumb. Christian just happened to have brought an extra GLOCK 34 holster with a drop hanger and he let me try it out. This was eye opening, now I had plenty of room for my thumb and could build my “perfect grip” as he calls it. I ordered a new offset hanger as soon as we got home. He was also quick to notice that I bend my right knee and lean to the left when I draw my gun. I do this because I am high waisted and this action helps me get my hand up and on the gun. It’s a bad habit I’ve been trying to correct for some time. In a defensive situation it’s a tell that could have deadly consequences for me, but in competition it’s simply a waste of motion and time. He demonstrated that by simply bending both my knees and getting into a lower stance, my gun is brought down just enough that I can reach it better and establish my perfect grip without needless movement. My draw ends up being much smoother and quicker as well. In fact, Christian says getting into a lower stance pretty much corrects most movement issues – more on that later.

Christian keeps it positive and encouraging. He diagnoses a shooter quickly and explains what’s happening and how to fix it. This is a great skill for an instructor as it allows students to make corrections quickly while making the most of class time. This prevents the student from repeatedly practicing a skill incorrectly. I experienced this first-hand: Christian corrected me by saying, “gun up, gun up, gun up”! I tend to bring the gun down when reloading or moving between positions. Keeping the gun positioned higher in front of me between shots saves valuable time and allows me to get into position quicker to break the next shot.

Christian is well on his way to becoming a qualified and – if my hunch is correct – a highly sought-after instructor. I can see now how helpful it is to have a qualified instructor explain how to break down each action into its basic parts. You can then isolate and practice each of those parts, and when you put it all back together again the whole action is improved.

The more you do something, the less focus you have to devote to doing it. Your brain realizes it can move that action into the subconscious. Take driving for example: at first, you have to hyper focus on each

action. But years later you’ve performed those actions so many times you can do it without actively thinking about each one of them. Actions we perform over and over are seen by the brain as extremely important. Those actions are then moved into your subconscious. This is exactly where I want my shooting skills to end up – in my subconscious.

We finished up the day with some movement drills. Targets at different distances require different approaches. Close-up targets allow you to move fast and shoot fast. Targets at greater distance require a steady shooting stance and seeing a solid sight picture before you press the trigger. For these long shots, Christian quoted a favorite movie of his, “The Patriot”, by suggesting we “aim small, miss small,” and pick a specific point to aim at on the target. How you move between the two shooting positions is important. Coming from a background in baseball, Christian had a lot to say about movement. Using the concept of stealing a base, when you want to move quickly out of a shooting position you need to get low and load the leg you are going to the push off with. This is important because getting low and loading up the leg will get the muscles ready for quick and explosive movement. We worked on the various types of entries, exits and shooting on the move. Staying low throughout the entire stage is a more efficient way to move. We all awkwardly tried to look as agile as Christian as we attempted to move into and out of different shooting positions.

By the end of the day, I found it hard to put together all the actions we learned at once. My brain wanted to focus on one thing at a time. With time and repetition, I know I’ll be able to combine the skills we learned and start to see some progress. Before this, I had never spent eight hours shooting at the range. We were all tired, but it was a GOOD tired! We did some valuable training and shared a very enjoyable day together.

As we made our way back to our north Seattle home, I saw images of myself running through stages and shooting fast and efficiently. I can dream, but I have no illusions that my 51 years will allow me to match the accomplishments of someone 32 years my junior. I DO know that hard work and passion can make up for a lot. If I push myself to grow and learn and can see improvement in my skills, I’ll be quite content. The journey and those we meet along the way add richness to life I know I’m lucky to experience. We all wish Christian the best as he trains to prepare for the IPSC World Shoot next year in Thailand!

Hope to see you out there.

"Big Fifty" [^]

STANDARD FEATURES:

- Made in the USA
- 4-Station Interchangeable Toolhead
- Uses Std. 1-1/2"-12 UNF Thread Dies
- Manual Shellplate indexing
- Average Loading Rate: 300 Rds./Hr.
- Loads High Volume/Match-Grade Ammo
- Milspec/Match-Grade Priming System
- Ductile Iron/Carbon Steel Construction

John Marshall on Classic Firearms:

The Springfield Model 1795 musket is one of our most historic military firearms. This was our first official military longarm that was actually produced by federal armories in the United States. It is memorialized by being replicated as the infantry branch “crossed muskets” insignia on U.S. Army uniforms even today. This is its story.

Following the American Revolutionary War, large numbers of military muskets were in our inventory. Most of these, roughly 20,000 in number, were 1763/1766 Charleville-pattern arms that were gratefully provided to us by France to be used against British forces. Inasmuch as most of the American veterans of that war were familiar with those French weapons, it was only natural that our first official indigenous long arms resembled them in many particulars.

French muskets were made at many arsenals, but the majority that were shipped to the Americans came from the Charleville Armory, and that name stuck as a generic term for muskets that conformed to the general design. These were mostly of .69 caliber, which was a bit smaller than the “Brown Bess” British standard of .75 caliber. The Charleville guns fired a ball that weighed in at about 370 grains compared to 500 grains for the British guns. The French weapons had a slight advantage in range, with a usual gain in velocity of about 200 feet per second over the British guns. The barrel of the typical French musket was secured within the stock by three barrel bands, rather than with the British custom of cross pins. The performance of these guns was generally acknowledged by the Americans as being superior to those issued to the British, and the first official American musket didn’t vary much in configuration from the popular Charlevilles. The American Congress had passed an Act in 1794 that established the first national armory in Springfield, Massachusetts, and specifically chose the Charleville model of 1763 as the pattern for our first official longarm. The new armory in Springfield started with storage depot buildings that were already there since the Revolution.

What was to become the American Model of 1795 mimicked its French predecessor in most respects, keeping the caliber at .69 and the barrel length at 44-3/4 inches. The stock was of black walnut, measuring out at 56-3/4 inches long. The overall length varied from 59-1/2 inches to an even 60 inches. The weight ran an average of 8 pounds and 14 ounces. The flintlock hammer necks on French muskets were of two types: a single gooseneck design and a double-necked hammer with a reinforcing loop under the jaw. This latter type became standard on the Model 1795. A steel ramrod with a mushroom tip fit into a channel in the stock, and was held in place by a spring retainer at the breech end. The stock had a straight grip and the forearm extended almost to the muzzle. Two sling loops were provided, one in front of the trigger guard and the second on the middle barrel band. The front sight was part of the forward barrel band and in front of it the bayonet lug was located on top of the barrel, although the first weapons had it mounted underneath. Due to the “by guess and by gosh” inherent lack of accuracy with smoothbore muskets, no rear sight was utilized. The locks usually had “Springfield” stamped in a semicircle on the lock behind the hammer, and “US” between the base of the hammer and the powder pan. The “US” was surmounted by a stamped federal eagle. The metal parts were left in “National Armory Bright” (not blued or otherwise color treated). None of the Springfield-manufactured 1795s were ever serial numbered.

Musket manufacturing at that point in history took time. The barrels were particularly difficult, as deep-boring machinery and long bars of steel were simply not available. The barrels had to be made by wrapping a red-hot strip of steel around a long mandrel, and forge welding the strip together by hammering. The welded-up barrels were then reamed and polished on the inside and smoothed and tapered on the outside. Long barrels were necessary then, as the quality of black powder often varied greatly. The longer barrel

The U.S. Springfield Model 1795 Musket

“It is memorialized by being replicated as the infantry branch ‘crossed muskets’ insignia on U.S. Army uniforms even today.”

was designed to churn, mix and burn the powder thoroughly in order to effectively propel the paper-patched bullets through the bore. Large powder charges were usually necessary to do this, with 160- to 190-grain loads being common. Any longer barrel length was impractical. The length was limited by the necessity to allow for stand-up muzzle loading. A 14-inch bayonet made for an overall length of more than six feet with the bayonet fixed. This was good for defense against cavalry and for providing extended reach against infantry when battle was in close and there was no time for reloading.

Mass production of the musket locks was also quite difficult. Initial production at Springfield necessitated a lot of hand labor to make the components, as tools, jigs, fixtures and machine tools were scarce. The result was often a wide variation in the dimensions of the parts. As the 19th Century dawned, water power was employed more often at Springfield. This enabled improvements in such things as grinding, drilling and turning. Also, as time went on, more specialized tools and gauges were used, making manufacture a bit more uniform.

The Model 1795 muskets were also manufactured at Harpers Ferry Armory in Virginia after 1801. A number of contractors made them too, among them Eli Whitney’s facility in New Haven, Connecticut. The result of this mish-mash of manufacturing sites was that a lot of minor variations on these muskets have been noted, such as a tilted brass pan on the lock, and rounded rather than flat and edge-beveled hammers. About 80,000 of the 1795s were made at Springfield, and roughly 70,000 at Harper’s Ferry.

Although a number of minor changes were implemented over time to the Model 1795, enough significant changes had occurred by 1808 to change the designation of the official musket to the Model of 1808. Like its predecessor, the newer model was made at both Springfield and Harpers Ferry as well as at a number of government contractors. The pan

became rounded and was made as an integral part of the lock plate. The stock was shortened somewhat and the groove that ran back from the comb of the stock was noticeably shortened in length. Barrels were reduced in length by 1/4 inch and the overall length was shortened by an inch. The trigger guard was cut shorter by about two inches and simplified in form. Unfortunately, interchangeability of parts was not possible at that time due to a widespread lack of uniform dimension gauges. This vital advantage was very nearly achieved with the final U.S. evolution of the flintlock musket, the Model 1840. However, full interchangeability of parts did not become a fact until the manufacture of the percussion-cap Model of 1842. This finally enabled doing most repairs in the field rather than having to return some guns to armories for proper fitting.

Model 1795s continued in use during the War of 1812, the Mexican War of 1846-48, and in the Civil War (1861-1865). Most were eventually converted from flintlock ignition to use percussion caps; although it is known that many Confederates were issued original flintlocks at the beginning of the Civil War. The service life of the Model 1795 had extended from 1795 to 1865, a span of about 70 years.

The Model 1795 was the first in a long line of official U.S. armory-produced weapons, ending with the M14 rifle in the 1960s. It is comparatively little known and very seldom encountered today. If you find one of these historic weapons for sale in original flintlock condition, you should be prepared to empty your piggy bank!

In 1965, Secretary of Defense Robert McNamara – who called its functions neither “necessary nor desirable” – closed down the storied Springfield Armory. It exists today only as a fantastic museum that recalls and reveres its days of extreme importance to our ability to defend our country. I have been there on several occasions. It’s definitely worth visiting if you can; it houses some incredible national treasures that trace our military firearms over three centuries.

5.11 Tactical®

Double Duty TDU®

Trainer

Operator

The Double Duty TDU® belt is metal-detector friendly and offers two color options. Both the Trainer and Operator belts feature 6,000-pound-test buckles and heavy, reinforced stitching, therefore can be quickly converted into secure tie downs, secondary carry straps or emergency harnesses. All 5.11 tactical belts are made of strong nylon webbing and provide a stable support for carrying firearms and accessories. *According to 5.11 Tactical, belt sizes run small, so they recommend you order one size up for the best fit.*

BLADE-TECH™

The Blade-Tech Ultimate Carry Belt by Nexbelt is specifically designed for those who carry a firearm daily for personal defense. The PreciseFit ratchet system allows you to quickly tighten or loosen the belt in 1/4" increments up to 6" for the perfect fit – no matter how you carry. Rest assured, this will be the most comfortable and fastest adjusting belt you will ever own. The Ultimate Carry Belt has a water-resistant backing that helps prevent moisture from penetrating the outer surface and allows for extra strength and durability. **One size – adjusts to fit all.**

Comtech's STINGER

THE STINGER: Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger!

“Plan B” Very-Bad-Day Planner Holster

Dillon’s “Plan B” Very-Bad-Day Planner Holster[▲] holds a handgun and a spare magazine or pepper spray, yet it fits in with business clothing and won’t draw undue attention. It looks like a typical day planner, but inside there’s a holster that’s adaptable for either right- or left-hand draw. It fits most .380, 9mm, .40 and .45 caliber autos, including: Beretta, Colt, GLOCK, HK, Kahr, Kel-Tec, Ruger, Taurus, SIG, and Smith & Wesson. Will also hold small-frame revolvers with two- to four-inch barrels.

“Plan B” Holster **P78-10252 \$29.99**

Mernickle Conceal-Carry Performance Series

Conceal-Carry Performance Series revolver holsters can be worn strong side, appendix carry or cross draw and are fully molded. Auto holsters are strong-side only.

ODIN Ready Bag

ODIN Works introduces the new ODIN Ready Bag[^] (ORB)

featuring multiple pockets and pouches for mags, small gear, a clip for your keys, a water bladder pouch, and soft dividers inside to take down and pack your AR-15 while keeping parts safe and separated. For those builds with longer barrels, there is an extendable pouch at the top to ensure that any rifle will fit and be carried with ease.

Whether you're going to the range, out on a hunting trip, or just hiking through the woods, packing your gear has never been easier!

- Quick-release compression straps
- Four D-ring attachment points
- Key clip
- Loop and hook fasteners
- MOLLE fasteners
- Reinforced handles
- Two water-bottle pockets
- Ambidextrous shoulder strap
- Locking buckle
- Dividing panels that separate an AR upper and lower
- Water-bladder pouch and hole for hose
- Pocket extender: *Can remain in bag as a pocket or extend up through the zipper to fit longer barrels*
- Available in black or coyote brown
- Dimensions: 28" x 7" x 6"

Shooters Help Shooters

By Duane Thomas

Shooting an IDPA match recently, the first two stages, one of the guys on my squad is having constant malfunctions with his Taurus G2 Millennium. He blames it on the steel-cased ammo he's firing. "This has never happened before, I decided to use this cheap ammo without testing it first." I feel really bad for him. Watching his gun choke, hard, multiple times per stage is just painful to watch.

I hear him talking to a few people, "If this continues the next stage, I'm just going to quit. I mean, I'll stay, and watch, and help out, but I won't shoot anymore. This is just frustrating."

I walk over. "You know, I have some brass-cased, factory 9mm out in my car. I could give you a few boxes to finish the match."

He hesitates. "Thanks, I appreciate that, but I don't want to take all your stuff."

"Man, I've got like three thousand rounds of factory 9mm out in my car."

Another shooter at that point sticks out his hand and says, "I want to be your friend!"

I shake his hand. "Wow, I feel so special!"

The man with the malfunctioning gun says, "Well, how much would you charge me for it?"

"I wasn't even thinking about that.... Tellya what, I'll trade you two boxes of brass-cased 9mm for two boxes of the steel-cased stuff, straight across. Fair enough?"

"Sure. Thanks." He sticks his hand out. "I'm Eddie."

I shake his hand. "Duane. Pleased to meet you."

So, I walk out to my car, grab a couple of boxes of Federal, walk back to the range. I don't see Eddie.

"Hey, where'd Eddie go?"

"He walked over to the safety area."

Leading into that particular safety area is a long, narrow bay, along its left-hand side are a bunch of plastic 55-gallon drums the club uses as props, that's where they store them. At the end of the bay is a table that constitutes the safety area. Eddie's standing at the table,

he's got his gun in his hands staring at it, he doesn't see me since I'm coming up behind him. His body language looks miserable, slumped shoulders, he's just radiating unhappiness.

I stop well back, say, "Hey, I can't come into the safety area with live ammo, I'm just gonna leave it here, okay?" and I sit the ammo boxes down on one of the drums.

"Okay, thanks, I appreciate it."

I walk back to the bay where the rest of the squad is still shooting; shortly thereafter Eddie comes back, starts loading his magazines with the Federal. The

squad finishes up the stage, we move on to the next.

I'm standing looking over the stage; Eddie comes up and says, "Hey, I put your ammo over there by your shooting bag. Thanks again."

"My pleasure, I just hope your gun works now."

I go over to the covered area...and find sitting there beside my shooting bag one of those 150-round boxes of Winchester Forged consisting of a paper sleeve around three 50-round flats.

I walk back over to Eddie. "Hey, I appreciate the thought, but you really don't have to give me 150 rounds for 100."

"Well, you did something nice for me, I figure I should do something nice for you. Besides, the way that stuff has been working, it's literally not worth the trouble for me to open up the box and remove one of the trays."

And that, friends and neighbors, is how human beings should relate to each other. "You did something nice for me, I should do something nice for you."

Eddie thanks me, like, six times total before the match is over.

Oh, by the way, his gun runs flawlessly for the rest of the match.

You can find Duane at patreon.com/duanethomas.

"You did something nice for me, I should do something nice for you."

SnapSafe Modular Vaults LOCKBOX

The SnapSafe® Modular Vaults LOCKBOX is a pry-resistant 16 gauge steel container that provides secure storage for handguns and other valuables. Meets TSA airline firearm guidelines. Dimensions: 9.5" x 6.5" x 1.75".

HYSKORE Six-Gun Modular Pistol Rack

The HYSKORE Six Gun Modular Pistol Rack is constructed from closed-cell, non-reactive foam that will not absorb moisture or react with lubricants or solvents. It has a soft, suede-like finish, but is rigid enough to offer firm support. The rack will hold six pistols with either single-stack or double-stack magazines, and can be disassembled and reconfigured to hold guns with wider or narrower grips. The modular feature of the rack also means that two or more racks can be connected together and reconfigured not only to give each gun its own "special home," but also to take maximum advantage of all available space in your safe or vault. This is easy to do using 3/16" threaded rod, washers, and hex nuts available from any home-improvement store. The rack measures 11-1/4" wide x 7-1/2" deep x 6" high.

P78-10208 \$19.99

Hornady Security Dehumidifiers DESI®PAK Desiccants

Absorb humidity and prevent rust or mildew in gun safes or other enclosed areas.

Moisture-control crystals change color when unit needs recharging. Recharge by plugging into 110V electrical outlet.

P78-66702 \$19.99

Protect your valuables against rust and corrosion.

When the moisture control crystals turn pink, recharge unit by placing it in the oven. Unlimited recharges ensure a lifetime of use.

P78-66701 \$19.99

These 532 gram DESI®PAK desiccants absorb moisture better than silica gel. It's an industrial grade material that exceeds the requirements of Mil Spec MIL-D-3464E. Now available in smaller packages for other applications (ammo cans, long-term storage containers, etc.).

KCI USA Magazines

KCI USA Lifetime Warranty

KCI USA products are built to withstand a lifetime of hard use. KCI USA offers a lifetime warranty on manufacturers defects on all KCI USA products. This warranty covers all products manufactured by KCI USA.

Designed to fit AK-47-style rifles chambered in 7.62x39, these KCI USA magazines provide reliability and smooth feeding. Constructed of steel with an electroplated finish, these magazines will withstand the toughest corrosive environments. A high-tensile compression spring, anti-tilt follower and reinforced feed lips provide reliable feeding and long life. A ribbed exterior and a prominent dorsal spine provide a positive grip for precise manipulations.

Gunsite Academy's

"250 Pistol Class"

By Kimmie Dillon

Do you have a plan? In these challenging times, three things are on the rise: the crime rate, firearm purchases and ammunition sales. For those who are new to firearms, the purchase is only the first step. So why should we get defensive firearms training? It's simple – we cannot wish crime away. And because on our worst day, when our life or those we care about are threatened, we won't rise to the occasion. Instead we will fall to our lowest level of training. Using a firearm to defend life and liberty is our precious right. The instructors at Gunsite Academy understand today's threats and that there are no second place winners.

A little history: My Father-In-Law (Mike Dillon), Husband (Steve Dillon) and Rob Leatham visited Gunsite initially in 1976. In this photo they are all sharing stories with Gun-

site's Founder, Jeff Cooper. Lt. Colonel Cooper was a WW II and Korean War combat veteran. He was known for teaching The Modern Technique of the Pistol through the American Pistol Institute and Gunsite. Over the years, I have heard stories about this reputable training facility and decided our daughter and I would take a course.

Gunsite is known to be the Harvard of shooting schools. The academy is located in Paulden, Arizona where the high desert weaves around majestic and rugged mountains. When I think of how to describe the 3200-acre facility to you, "Disneyland" comes to mind. Approaching the property, the overhead Gunsite Raven welcomes guests with his steel wings

spread to their fullest. Once inside of the grand gate, there are classrooms, a wide array of groomed ranges, indoor and outdoor firing simulators along with an enticing Pro

Left to right: Jeff Cooper, Mike Dillon, Steve Dillon and Rob Leatham in 1976 at Gunsite. Nyle Leatham photo.

Shop (complete with friendly and knowledgeable ladies).

“The Gunsite Experience” is the 250 Pistol Class and the prerequisite to take future classes. The focus is on The Modern Technique of the Pistol including marksmanship, gun handling and mind-set. On Day 1, it becomes obvious to me that our class consists of like-minded individuals from all across our country. Everyone has different backgrounds yet we all are here to grow. If we bring along the pressures from our everyday life, the Raven will get less of us. We stand for the Pledge of Allegiance and receive a bound copy of the Declaration of Independence and the Constitution. I get the sense that Gunsite is more than a school. There is a pure culture here that I instantly connect with.

On the range our three instructors have a combination of intensity and patience. They make it clear they will not accept anything other than the highest standards of safety. My classmate Walt Lipski from Prescott, Arizona sums it up best: “Our instructors were first class. I can’t imagine a more knowledgeable, collective team of real-world shooting and self-defense experience to have as instructors. Their interaction was seamless and complimentary throughout the whole course. They were just terrific.” I totally agree, Walt! Our Rangemaster, Lew Gosnell, is a former Police Supervisor, Marine Corps MP and Marksman who is also a competitive shooter. Instructor Chris Currie is a retired Gunnery Sergeant with 21 years in the United States Marine Corps, 17 years within the Reconnaissance community. And Aimee Grant is a former Marine Corps MP and Marks-

man who also brings 15 years of experience as a Law Enforcement Officer in Southern California.

The curriculum at Gunsite uses a building-block approach. By applying gradual pressure everyday, our speed and accuracy increase. When the intensity gets high, we take a quick break, discuss, reload and go back for more. Everything we learn has a purpose. There is no fluff or gimmicky tricks. Fellow student Mary Jane Ajodah from New York City says she would recommend Gunsite to other shooters, “Our instructors were incredible. I gained some serious consistency in shot placement, and have a better ability to deal with stresses. I never had the opportunity to even practice these critical skills in NYC. Clearing the “fun house” was also very important – it was an incredible amount of stress and the techniques I learned made me feel more comfortable defending my own home and family.”

The “fun house” she refers to is a set of indoor simulators. With frangible ammo, we enter a house using defensive handgun techniques and experience real-life situations. Clearing a house requires tactics, strategies and logistics to help us survive. We learn how to place our body off the aggressor’s line of attack and how to change the odds to make our adversary react to us.

Gunsite also has live-fire outdoor desert simulators that replicate clearing or searching an area. Here we trek through arroyos with steel targets while staying defensive. Classmate Robert Rosenberg from New Jersey says this open desert shoot is his favorite part. He is taking 250 Pistol with his teenage son, Jack

WARNING: The products offered for sale in this catalog can expose you to chemicals, including Lead, which are known to the State of California to cause cancer, birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov.

Rosenberg. "Everything about the 250 Defensive Pistol will prepare us for a threatening situation. There is no better place in the world for civilians to obtain practical firearms skills than Gunsite." This is Robert's fifth trip to Gunsite over the past 27 years. Another student in our class says he travels to Gunsite because, "There is no such training available in my state of California." Edgar Bolanos of San Francisco says he most enjoyed the *El Presidente* drill along with the simulators, both indoor and outdoor. When I asked him if he would recommend Gunsite to fellow shooters, he said, "Absolutely! To keep you sharp and frosty or introduce one to proper training."

Gunsite is a gun-fighting school. Yes, they teach you marksmanship, but the underlying theme is crisis intervention. Along with the firearms training, proper mind-set is an emphasis throughout the week. We must refuse to think like a victim and raise our awareness on a daily basis. Most importantly, we have to dedicate ourselves to always stay in the fight.

Our week wraps up on Friday with several qualification drills. Our classmates enjoy a camaraderie from sharing this experience together. Jason Odom from Detroit, Michigan wins the class competition (Way to go, Jason!) and receives the coveted Raven pin. "Gunsite is the best, I have heard my father and his shooting buddies talk

about Gunsite since I was a young teenager. Traveling to the Gunsite ranch, the commitment and the money involved separates the people that truly want to learn and are serious about it from the people that just want something to do on the weekend. The level and quality of instruction is top notch."

At the graduation ceremony, CEO Ken Campbell welcomes us all to the Gunsite family. My daughter and I both view this as a life-changing week. Our Gunsite experience can be summed up in

one word: INCREDIBLE! To our fellow classmates and instructors, we are grateful for the time spent together. And remember, as the old saying goes, "The more you sweat in peace, the less you bleed in war."

Meet Ken Campbell, Gunsite Academy's Chief Executive Officer

By Kimmie Dillon

There's a familiar face inside the gate at Gunsite. Ken Campbell can be seen across the range everyday sporting his warm smile and engaging personality. He makes a special point of making all students feel welcome throughout the week. One

could say he's a natural fit to be the CEO as he originally attended Gunsite as a student three decades ago.

KD – Ken, you really have an impressive law-enforcement career. What made you decide to come to Gunsite?

KC – Thanks for the kind words. I loved being a Deputy Sheriff (and later Sheriff). It was grand work. I was always looking for more and better training. It is how a LEO remains strong and with a proper attitude. My Sheriff was a great mentor to me and promoted better training. While I had attended other training, Gunsite was the pinnacle as I had read Jeff Cooper in *Guns & Ammo* for years. So, I was fortunate that Sheriff Hudson allowed me to attend and then he attended. When I received my offer to become a part-time instructor at Gunsite, I couldn't

believe it. Fast-forward about 20 years and I nearly fell over when Buz Mills offered me the opportunity to run Gunsite for he and Sonja. I'm one of those lucky folks to be blessed with a wonderful, beautiful wife, a great law-enforcement career and now an unbelievable second career. I truly am living a dream.

KD – You really are. Tell us what you like most about working at Gunsite?

KC – First and foremost, the great Gunsite family. That's what we call our students and alumni and staff. We meet the best people from all over the world in all lines of work who are serious about wanting to learn to better protect themselves and their loved ones. What better way to be motivated than be around people like this? It is a blessing to love what you do.

KD – I love how positive you are! Ken, there are a lot of firearms classes out there. What makes Gunsite superior to other shooting courses?

KC – There are many, many classes with great instructors. Gunsite is the oldest privately owned shooting school in the world as far as we know. If you look at many of the other schools, many of those folks attended or worked at Gunsite or what they teach has a basis in The Modern Technique that Jeff Cooper developed. What we recommend is for folks to determine what they want to learn and see who offers the most for their money. We can offer things most places cannot, such as our indoor and outdoor live-fire simulators and some of the best instructors in the world.

KD – Gunsite sets the bar high here. What qualities do you look for when selecting an instructor?

KC – As pompous as it sounds, Gunsite has always had the best of the best in instructors. In class number one, there was a fellow named Bruce Nelson as an instructor. That name is significant in the firearms industry. We have not slowed down. Colonel Cooper always wanted those who have “seen the elephant” and have the gift of being able to teach. And they must be able to teach to all levels of students. Our students range from “the little old lady door greeter” to some of our nations greatest warriors. I like to say they must be able to offer the show with dinner. We pick our staff from our students. We don’t teach you how to teach. You must come with that. You must have a mastery of Gunsite’s training methodology. Then they must pass a rigorous apprentice program. Some don’t make it. Receiving a Gunsite “Instructor Raven Pin” is an honor and should be a great challenge to receive.

KD – Absolutely! Let’s talk about our 5-day class. What is your goal when students graduate from the 250 Pistol Class?

KC – We hope that our alumni can now handle “crisis management of close range interpersonal confrontation.” The most important goals are Mind-Set and Safety. Our Mind-Set lecture and training is legendary in the industry. With the proper mind set, your chances of surviving a lethal encounter are greatly increased. We teach you that if you are aware, you may avoid the situation altogether and that is a huge win. The other aspect is Safety. We drive the Four (4) Safety Rules into each student so it becomes a permanent part of their consciousness. When they leave and they go to a public range, they are often frightened by the abysmal and unsafe gun handling. So, if we can make them better aware of their surroundings and more safe, we have achieved a great goal. Having said all that, the gun handling and marksmanship are a bonus!

KD – A tremendous amount of material is covered during the 250 Pistol week. How important is practicing to retain the newly learned skills?

KC – We like to say that we take a fire hose of information and put it alongside your head and open up the bale. There is so much covered in that 44-46 hours that some is not retained. Many folks take the 250 Pistol Course time and time again. When they do they will often comment that we have added something to the instruction. We did not (although The Modern Technique does evolve). There was so much information in their initial week, they just missed it or forgot it. One can never have too much of the basics. Shooting is a perishable skill and you must practice properly – even dry practice

– to maintain your skill level. Consider this: What is an advanced gunfight? It simply is the basics under more and more stress. You need to strive to come to unconscious competence so you can react properly.

KD – During my week, I had the pleasure of meeting attendees from all over our country. I really enjoyed hearing so many stories.

KC – Gunsite Academy prides itself that over the nearly 45 years we have been offering firearms training, we have trained everyone from young men and women (12-13 years old) to the CIA and other unnamed agencies. The emails and calls and letters we have received simply saying “It worked” or “You guys saved my life” make it all worthwhile. For example, these messages come from “earth people” who survived the Las Vegas mass shooting (He and his wife were both shot, but he said that their Mind-Set training helped them survive. They knew where exits were and focused on escape and then the Mind-Set changed to survival and getting to the hospital), to law enforcement (local, state federal) and elite military units. Personally, I remember a message from a Navy Chief after her first deployment (and training in a Gunsite 250 Pistol Course) simply said: “You guys saved my life.” That is all I know and all I need to know.

If Gunsite training has saved one (1) life in the last 45 years, it makes it all worthwhile. Yes, the training is costly, but what value do you place on your life or those most precious to you?

KD – Anything else you want to add?

KC – I saved my nickels and dimes and deposit on pop bottles to help get my tuition to Gunsite on more than one occasion. You can set your goals and work toward them as well. Also, the Cooper family manages “The Jeff Cooper Legacy Foundation” and offers tuition scholarships to the Gunsite 250 Course. Visit their web page and consider applying. You will never regret the time you spend at Gunsite, you will make life-long friends, and it may very well save your life. What better deal is there?

KD – A win-win. My week at Gunsite was *incredible*. I truly enjoyed every day – what a solid experience.

KC – We love it when people have the Gunsite epiphany. It is so hard to explain what we really offer here.

KD – And by the way, we all enjoyed your daily frozen treats on the range – ha ha! You helped keep us cool during the Arizona summer.

KC – I love coming downrange. My love is teaching, but my primary job is managing Gunsite now. So, it motivates me to come downrange, visit with the students and see the big smiles with the Otter Pops! (And hot chocolate in the winter.)

KD – A big “THANK YOU” to Ken, Lew, Chris, Aimee, and all of the fine people at Gunsite Academy!

Real Avid Level-Right™ PRO

A level reticle is critical to long-range accuracy. For longer shots a canted reticle will pull or push a bullet's trajectory off of vertical center. It gets worse the more the distance increases. A level scope means that

the reticle will be perfectly aligned with the rifle bore. Balancing small levels on a scope turret and gun receivers has been a commonly accepted practice for years. Not only is this a clumsy process, it's wrong. The turret on most scopes is not perfectly aligned with the reticle, so even if your turret is level to the gun, your scope may not be. Level-Right PRO changes all that by simplifying scope alignment in four easy steps. Accurate and intuitive, this timesaving instrument quickly aligns the actual scope reticle to the horizontal gun plane, which is key to the long-range accuracy of your rifle. Level-Right PRO helps you quickly and confidently mount a scope for maximum accuracy.

Level-Right PRO P78-21777 \$69.99

The HMB Bolt

Young Manufacturing is the licensed manufacturer of the HMB bolt. The HMB Bolt by HM Defense eliminates the pass-through cam-pin hole and replaces it with a cam-pin socket and radiused cam-pin design. The new patented design eliminates the natural weak point of Mil-Spec bolts by significantly increasing the amount of metal (and strength) at the cam-pin location. The result: **NO MORE BROKEN BOLTS!** The HMB Bolt also reduces contact between cam pin and firing pin, enabling smoother operation of the firing pin, bolt lugs and aft gas rings. The new cam-pin socket also retains lubrication for extended operations. Comes with a phosphate cam pin.

HMB Bolt

P78-66680 \$99.99

Young Manufacturing's **Upper Receiver Vise** holds any AR15 upper receiver regardless of the manufacturer. Since it supports the receiver from the inside, the outside dimensions are of no concern. Made from aircraft-grade 6061 T6 aluminum and anodized to MIL-A-8625 Type 3 Class 2.

YM Upper Receiver Vise

P78-66679 \$34.99

This tool makes it simple to remove or install a new ejector and spring into the AR-15 bolt. Anyone who has tried to do this without a tool will be amazed at the reduction in the number of cuss words needed to perform the task. Comes with alignment and roll pin punch.

Swab-its A Swab for Every Job!

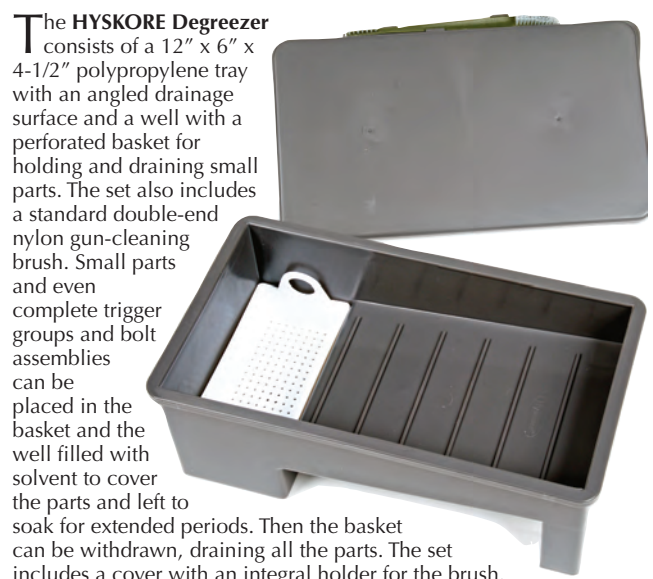

No s#!+, there I was...in my office, cleaning my revolver when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the *Blue Press* copy for them. They work GREAT!" The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning rods, and are tough and reusable.

Gun-tips® Extended Reach Firearm Cleaning Swabs by Swab-its® revolutionize the way you clean your gun. The foam tips are lint free, reusable and ideal for cleaning trigger assemblies, slide rails, springs, extractors and anywhere else space is tight. 24 per package.

P78-12583 \$9.99

The **HYSKORE Degreezer** consists of a 12" x 6" x 4-1/2" polypropylene tray with an angled drainage surface and a well with a perforated basket for holding and draining small parts. The set also includes a standard double-end nylon gun-cleaning brush. Small parts and even complete trigger groups and bolt assemblies can be placed in the basket and the well filled with solvent to cover the parts and left to soak for extended periods. Then the basket can be withdrawn, draining all the parts. The set includes a cover with an integral holder for the brush. This means the solvent that has been contaminated by the cleaning process can be left in the well of the Degreezer (rather than returned to the bottle) with the cover in place so that it's ready to be used for the next cleaning event. The tray, cover, and basket are made from polypropylene plastic. This has been proven to be impervious to all popular commercial cleaning solutions. It will also resist kerosene, acetone, and gasoline.

Slip 2000 Products

725 Gun Cleaner Degreaser should truly be called Super Degreaser. This water-based cleaner will cut through the toughest cosmoline, carbon, grease and grime! Its super strength allows it to degum and degunk the dirtiest of gun parts when sprayed on or used in parts washers or solvent tanks! **NOTE: To help prevent rusting, users must apply a gun lubricant immediately after cleaning to disperse any moisture in parts.**

Slip 2000 **Carbon Killer** provides you with a safe, effective way to clean carbon, lead and plastic wad fouling. Unlike other gun cleaners, this product is non-flammable, non-hazardous and biodegradable. Designed for soaking metal parts with baked on carbon, Carbon Killer dissolves carbon and lead on contact. **NOTE: Carbon Killer is for cleaning internal metal gun parts with baked on carbon by soaking them. It is an aggressive cleaner and should not be used to clean the outside of your gun. It can damage and even remove some finishes.**

Slip 2000's **Extreme Cleaning System** contains 2 Oz. bottles of: Carbon Killer Bore Cleaner, 725 Gun Cleaner Degreaser, and EWL Extreme Weapons Lubricant.

P78-11652 \$25.99

Slip 2000's **AR Cleaning System** contains a 7 Oz. bottle of Carbon Killer Bore Cleaner, a 15cc syringe of Extreme Weapons Grease, and a 1 Oz. bottle of EWL Extreme Weapons Lubricant.

P78-11676 \$19.99

Slip 2000 **Extreme Weapons Lubricant (EWL)** was designed for use on chain guns and machine guns like the MP5 and the 249SAW. It contains a proprietary Anti-wear agent that reduces friction and wear by 90-95 percent. It is an excellent CLP and is able to clean, lubricate and protect.

Slip 2000 **EWL30** has the same properties as EWL, except it is a lot thicker. It contains a proprietary thickening agent that makes this lubricant consistency like a 30-weight motor oil. It was designed for those who want or need a lubricant that will not migrate at all and don't want to use a thick grease.

4 Oz. P78-11644 \$18.99

4 Oz. P78-11645 \$18.99

Slip 2000 **Copper Cutter** is specially formulated to remove copper, lead, powder residue and plastic wad fouling from bore surfaces with little scrubbing! **NOTE: It is a water based, ammonia enhanced product and will remove all lubrication or oil protection, so always re-lube all parts cleaned.**

4 Oz. P78-11646 \$11.99

Each Slip 2000 **Gun Wipe** packet contains one 5" x 8" wipe treated with Slip 2000 Synthetic Gun Lube. Perfect for wiping your guns down after a day on the range or while out on a hunt. Apply to all metal surfaces. Great for light carbon cleaning. Safe for all firearm stocks and grips.

20 Pack P78-11674 \$14.99

TW25B is the choice of leading firearms manufacturers, armorers, pro shooters and gun enthusiasts, and is recognized as the world's best all-purpose weapons lubricant/protectant. It is now widely specified by the U.S. military for their most critical performance weapons systems. Environmentally safe, non-carcinogenic, non-ozone-depleting.

0.5 Oz. Syringe P78-15732 \$12.99
1.5 Ounces P78-15731 17.99

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it. Slide-Glide Standard is for use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard **P78-15571 \$7.99**
 Slide-Glide Lite **P78-15572 7.99**

Sweet's 7.62

Sweet's Australian 7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

Lyman X-Block Gunsmith Bench Block

Having the right tool for the job makes any gunsmithing project so much easier! Without the right tool, you may damage fine finishes or break parts. The **Lyman X-Block** is the right tool for anyone driving pins out of firearms. It has all the features to get the job done smoothly and professionally. The X-Block has both a "V" slot and a rounded slot running across the face of the block to support a variety of barrels and slides. The block is made of a tough, non-marring polymer, and edged with a softer non-slip outer overmold. The block has multiple holes to take on most any project, as well as a molded-in magnet on the back side of the block to catch pins and other small parts as they drop out. Its large 5" diameter provides a stable base with plenty of support.

P78-11390 \$15.99

On gun dealers shelves since 1976, the **ADCO E-Z Brite Wonder Cloth** is still a must for keeping stainless steel and nickel-finished revolvers looking like new. Demand the original lead and carbon wipe!

Duane's "Speed AND Accuracy" Rant

By Duane Thomas

The great myth among people who can't shoot with a good combination of speed and accuracy is that those who shoot fast are just "spraying and praying." Like it's a coincidence we're hitting the center of the target with every shot. The truth is that accuracy is the foundation of speed with accuracy.

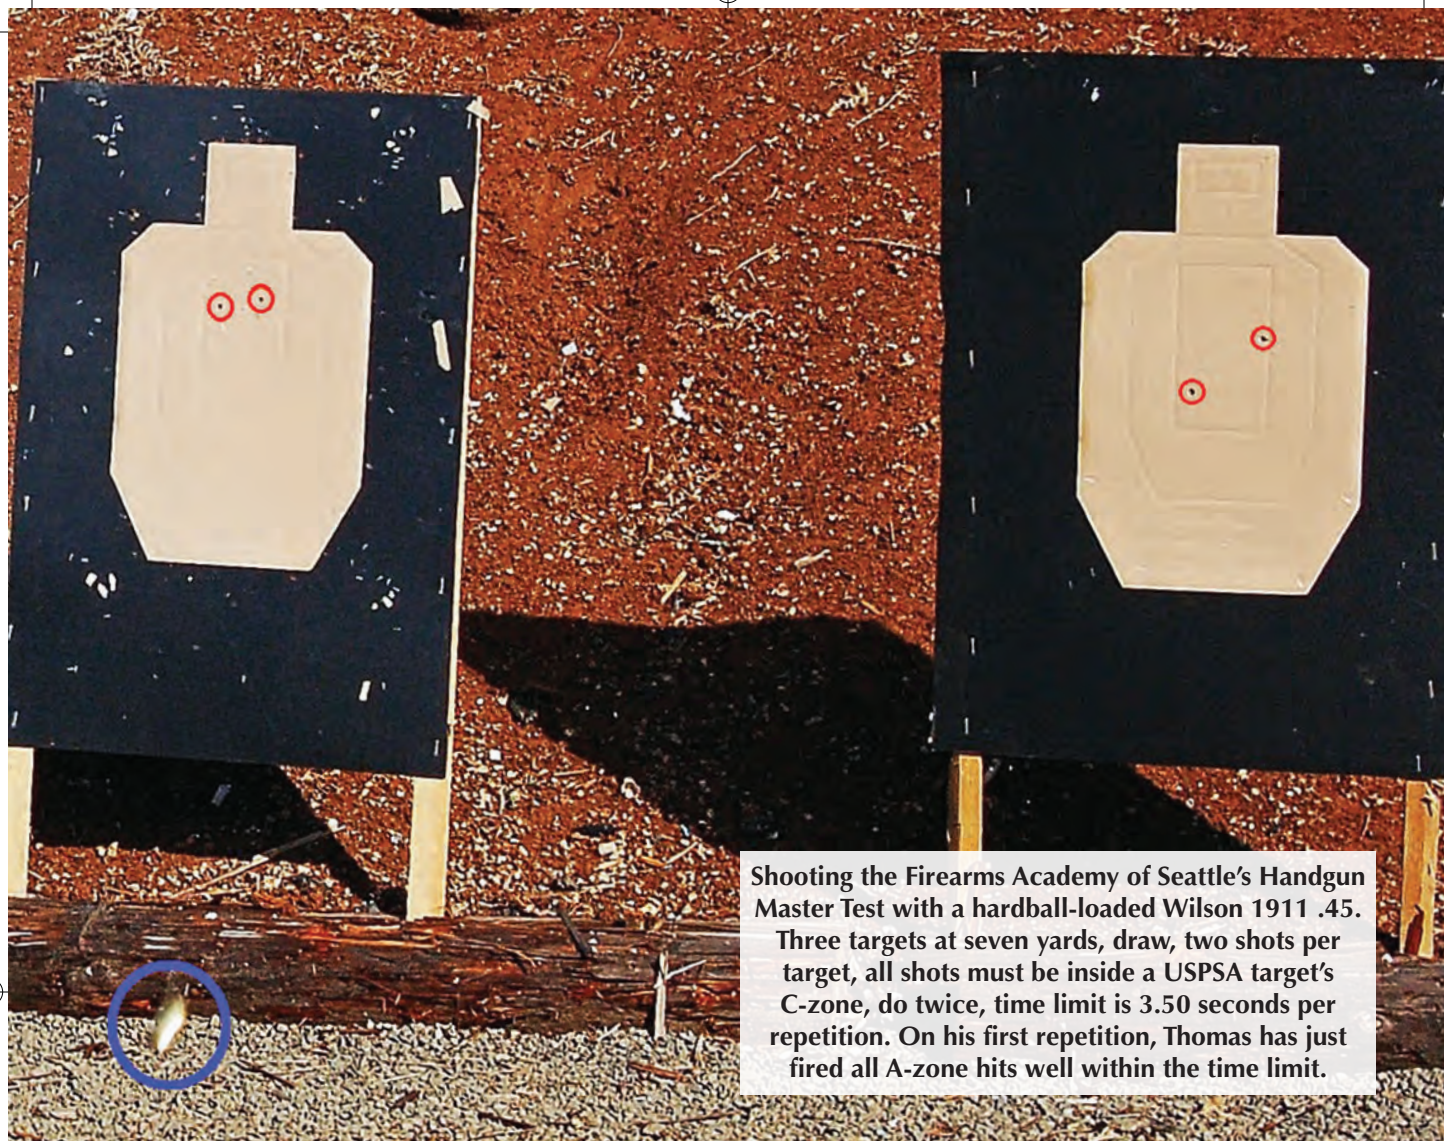

Let's begin by defining "accuracy," or rather what the shooter must do to fire an accurate shot. I've always thought shooting champion Angus Hobdell put it really well when he stated that accuracy is the result of a combination of refined sight alignment and refined trigger control, and that shooting with a combination of speed and accuracy is a process of sacrificing refined sight alignment and refined trigger control in return for speed. Before we go further let's hit an important point: How much refinement of sight alignment and trigger control we can afford to sacrifice in return for speed is determined by size and distance. How big is the target, and how close? The larger and closer the target, the faster we can shoot and still hit it. The smaller and/or further away, the more we have to slow down.

70 Blue Press

With that in mind, in order to understand how the foundation of speed with accuracy IS accuracy, imagine with me we're going to shoot an IDPA target, the highest scoring area of which is an eight-inch circle, the "down-zero" circle. In IDPA your final score per stage is your time, and hits in the down-zero circle drop no points, therefore add no time. At a particular distance, seven yards, let us say, when we take all the time in the world necessary to shoot with maximum accuracy, just exquisitely refined sight alignment and trigger control, we can put our bullets through one hole. Essentially we can shoot a zero-inch group right in the center of the eight-inch circle.

So, if we have one-hole, perfectly-centered accuracy skills at seven yards, how far away from that group in any direction can shots be and still hit the eight-inch circle? Four inches. That means, at that distance (seven yards), in order to hit that target (the down-zero circle), we can sacrifice a LOT of refinement of sight alignment and trigger control and still hit the target. Therefore we can shoot that target really fast, without dropping points, because we have great accuracy skills.

800-223-4570 • 480-948-8009 • bluepress.com

Shooting the Firearms Academy of Seattle's Handgun Master Test with a hardball-loaded Wilson 1911 .45. Three targets at seven yards, draw, two shots per target, all shots must be inside a USPSA target's C-zone, do twice, time limit is 3.50 seconds per repetition. On his first repetition, Thomas has just fired all A-zone hits well within the time limit.

Okay, let's say, at seven yards, when we take all the time in the world to shoot at our maximum accuracy potential, the best we can shoot is a four-inch group. (We'll assume the group is centered, which I realize is a bit artificial but work with me here, I'm illustrating a concept.) Now how far away from our four-inch group can we be in any direction before bullets start hitting outside the eight-inch circle? Two inches. Which means we can't shoot that target nearly as fast without dropping points, because we started with lesser accuracy skills.

Let's say, when we shoot with our maximum accuracy potential, with the best sight alignment, the best trigger control we have on tap to call, the best we can do at seven yards is an eight-inch group. It is all we can do to keep our shots inside the eight-inch circle. Suddenly our slowest speed and our fastest speed have become the same thing. We cannot shoot that target any faster than our slowest speed without dropping points.

There is a particular sort of shooter I call a "flash shooter." This is the person who started out with

really great reflexes, really great hand-eye coordination, and they can make a gun go bang really fast. They sound great, they look great, and if you don't check their targets, thus to discover they actually missed the entire target most of the time, they're really impressive. The problem is they're riding their great reflexes and hand-eye coordination really hard, they never actually learned how to shoot accurately. They're all flash; they look good, no real substance. They actually are spraying and praying. What separates good shooters from flash shooters is that when good shooters start shooting fast, our accuracy doesn't go to hell.

When you see a good shooter put the hammer down and absolutely blaze a target array dropping no points, no, they're not just magically flinching the bullets into the center of the targets. They are aiming every shot. Shooting with a combination of speed and accuracy is a process of trading accuracy (defined as refined sight alignment, refined trigger control) for speed. If you're not an accurate shooter, you have nothing to trade.

You can find Duane at patreon.com/duanethomas.

Shoot Out Targets

The Alpha Target is Shoot Out Targets' Patent Pending instant-reaction target system that can be reused again and again to improve your marksmanship. All Shoot Out Targets are made of durable cardboard that has been tested to withstand 1000-plus shots. Unlike clay pigeons that can only be used once, the **Foam Medallions** are durable and able to self heal for longer-lasting use, allowing for up to 40-plus shots per medallion. Each foam medallion is 3" in diameter and 1/2" thick. With the easy-to-see foam medallions you will get an instant kinetic reaction with every hit. Shoot Out Targets are proudly made in the USA, reusable for hours of fun and can be used with all-caliber firearms and airguns. The target stands 43" tall and 22" wide when assembled.

Scout Scope Mounts

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Scout Scope Mount for AK Rifle	P78-25374	\$79.99
Scout Scope Mount for SKS Rifle	P78-25373	78.99

“IT SEEMED LIKE A GOOD IDEA AT THE TIME”

Pedersoli “Rider” Derringer

Reviewed by Peter Caroline

One of the many delightful features of the NRA Whittington Center in Raton is its gift shop, which offers not only souvenir glassware and NRA-logo clothing, but also guns and ammunition. One may also peruse the contents of a 3-ring binder, which catalogs a huge selection of used firearms, a few of which are very rare and valuable indeed. A couple of years ago, I managed to find a Norinco-built copy of a pre-WWII Walther Olympia .22 target pistol for only \$100. It turned out to be not only a bargain, but also a surprisingly good shooter.

On my most recent trip to Raton, I of course stopped by the gift shop to see if there were any treasures to be

had. One of my friends had earlier that day bought a number of rarities far beyond my budget. One of the first items listed in the book was puzzling. It was listed as a “Perersoli .22 pistol,” and was priced at only \$25. I hadn’t the slightest idea of what this was, but my curiosity had to be satisfied, so I asked to see it, and the nice saleslady disappeared into the inner sanctum to fetch the requested item.

She returned with a tiny little pistol, about 4-1/2 inches long, all stainless steel, including the integral grips. It was not a “Perersoli,” but a Pedersoli...a modern Italian copy of the very rare and elusive Remington Rider single-shot derringer of early 1860s vintage. The original

76 Blue Press

800-223-4570 • 480-948-8009 • bluepress.com

was produced as a "parlor pistol," firing a .17 caliber lead ball powered by only a percussion cap. Apparently, the idle rich of that period would amuse themselves on a rainy day by shooting at small targets indoors, in the parlor, as it were. Not that there's anything wrong with that...I'd do it myself, were it not for the presence of my saner half. Anyway, I recalled that Dixie Gun Works was cataloging this modern replica at a bit over two hundred bucks, so \$25 was "a bargain." I bought it.

As it turned out, buying it was not simply a matter of handing over the cash. Because the gift shop had mistakenly cataloged it as a .22, it had been recorded in their FFL book as a cartridge pistol. So, I had to go through some extra federal paperwork. Oh, well.

There were no .177 caliber lead balls available at the gift shop, so I had to wait until I got home to order said items from Dixie Gun Works. I also ordered a very nice walnut fitted pistol case, complete with a brass capbox with a repro antique "Eley's Double Waterproof Central Fire Percussion Caps" label.

Preparing the Pedersoli derringer to fire is an interesting drill. You bring the hammer back to full cock. You then remove the breechblock by lifting what looks like a tiny bolt handle, and pulling the unit backwards. Place a #11 percussion cap on the nipple, and then place a .177 caliber lead ball (not a steel BB) on the recessed area at the front of the breechblock, and

return the breechblock to its closed position. When you pull the trigger, the cap goes off, and drives the lead ball out of the barrel...it says here. Please note that this is done outdoors, unless of course there's no one at home who cares. In this case, I was on our back patio when I pulled the trigger. There was a "Bang," about as loud as a cap pistol. There was no corresponding hole in the large cardboard box, about 10 feet away that I'd set up as a target.

I cocked back the hammer, removed the breechblock and peered down the barrel. Sure enough, there was the lead ball. Drat!

I pushed the stuck ball out with a 4-inch scaffolding nail, which is an ideal tool for the task. Then I tried the process again with another ball. Same results. I dusted the balls with graphite powder and tried again. Still no luck. I dug through my collection of various types of projectiles and came up with a selection of well-aged Daisy and Crosman .177 lead pellets. All miked out at or a bit over .177" and would not pass through the bore. Then it occurred to me that perhaps a couple or three little Hodgdon Trail Boss "Cheerios" placed behind the lead ball might do the trick. Remembering past trips to the ER, I decided against that idea. I may have to find a quantity of #1 or #2 lead shot, which should be the right size to fit through the bore. Stay tuned.

New Products from

Like pretty much everything from Berry's Manufacturing, this 9" x 12" x 10" deep stackable utility box is made in America and covered by a lifetime warranty. *This one happens to be filled with once-fired, processed (polished, sized, deprimed, primer pockets swaged) 9mm cartridge cases (sold separately below) prepared at Dillon Precision on our new CP 2000 Case-Processing Machine.* The box is designed to stack and is great for storing bulky items. If your gun room/garage looks anything like ours, these will help you get organized. So, whether you're looking to store shooting accessories, ammo components, or car parts (we have more than our share of all of the above) these boxes are ideal. The best part is that they're transparent, so when you fill them, you don't have to open the WHOLE stack to find what you're looking for.

Individual First Aid Kits From The Tactical Medic

Nobody likes to think about it, but should a serious hunting/shooting accident occur, chances are the drugstore "first aid kit" you have stashed under the seat of your truck won't do much good. That's why we're offering individual first aid kits from The Tactical Medic. The Econo-IFAK contains a 4" Emergency Bandage, a TK-4 Combat Tourniquet, 1 Package of Rolled Gauze, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves. The Micro Kit #2 contains a 4" Pressure Bandage, 1 Package of Quick Clot Gauze, a TK-4 Combat Tourniquet, 1 Roll of Medic's Tape and 1 Pair of Nitrile Gloves.

Econo-IFAK (at right in photo) **P78-43379 \$19.99**
 Micro Kit #2 (at left in photo) **P78-43378 \$9.99**

D•WIPE Towels were specially designed for immediate clean up of most contaminants without water. The soft 5.5"x 8" towels are saturated with a unique cleansing formula and aloe vera, and will remove heavy metals from skin and other surfaces.

40 Soft Towels **P78-19916 \$4.99**

Original D•LEAD Hand Soap quickly cleans heavy metals as well as paint dust and firing range residue from the skin and fingernails. Removes lead, nickel, cadmium, arsenic, mercury, silver, zinc and most other heavy metals.

8 Oz. Bottle **P78-19915 \$2.99**

kershaw® TRUST YOURSELF. TRUST YOUR TOOLS. BE READY FOR EVERYTHING.

From clearing brush to making kindling, the Camp 10 is the ideal outdoor and survival tool. Cut, slash, hack, split, scrape – just about any task you ask of it, the Camp 10 can handle. The full-tang Camp 10 is made of carbon tool steel for toughness and wear resistance. A basic black powdercoat protects the steel and makes maintenance easier. You'll like the secure, contoured grip of the Camp 10, too. The handle has a built-in hand guard and is drilled in both front and rear so you can attach a lanyard either place – or both – for carrying versatility.

Blade length: 10" Overall Length 16" Weight, with Sheath 1 lb. 8 oz.
P78-55012 \$80.99

Key chains just got even handier with the new Kershaw PT-2 key chain tool. It offers eight handy functions in a very compact space. The PT-2 (Pry Tool-2) comes in at less than an ounce as well and offers a bottle opener and cap lifter, a pry bar, two screwdriver tips, a wire scraper, and three sizes of hex drives.

Overall Length 3.25" Weight 0.8 oz.
P78-55013 \$11.99

This "XL" Kershaw-Emerson now comes with D2 blade steel. D2, a high-carbon, high-chromium tool steel, is a knifemaker favorite and offers good edge retention and hardness, as well as being more corrosion resistant than other high-carbon steels.

Blade length: 3.9" Closed: 5" Open: 9"
P78-11689 \$74.99

Kershaw Volt II opens one-handed and with an authoritative "twack" thanks to Kershaw's SpeedSafe® assisted opening system. A simple pull back on the flipper and the Volt II opens smoothly and easily.

Blade length: 3.25" Closed: 3.9" Open: 7.1"
