work

RUGER
PIS

Designed with the strict U.S. Military standards in mind, the **Ruger American Pistol** is built to perform in the harshest conditions. A true American innovation, this pistol was developed through a rigorous "Voice of the Customer" process—where numerous law enforcement and military officers, firearms experts, distributors and retailers provided input on the design. The result is a new handgun from Ruger, one that utilizes a unique slide design which is designed to better spread recoil energy over time with a low mass slide, low center of gravity, and a low bore axis to provide an unparalleled shooting experience!

RUGER.COM/AMERICANPISTOL

Loop design with Positive Lock

Low bore axis for better control. Low Mass Slide. Low Center of Gravity. Low Recoil

Slide With Lock for easy slide lock release

Slide With Adjusting Pin System for Adjusting Field Stop and Trigger Reach

Adjustable Slide Stop, Manual Safety and Magazine Release. Now Available with Chief Hand Stop. Made in America with Federal Safety

Slide With Lock for easy slide lock release. The Chief Hand Stop is a new feature that provides a secure grip. Made in America with Federal Safety

Dillon's RF 100 Automatic Primer Filler

***Eliminates the need
for primer pick-up tubes!***

***Fills the primer tube
while you reload!***

***Clear polycarbonate shield
and protective housing***

Dillon's RF 100 Automatic Primer Filler eliminates the task of filling primer pick up tubes. Now you simply pour your primers from their box into the top, press the blue button and watch it run!

In about two minutes the primers are inside the protective metal housing. That's about 30 rounds you can load while the RF 100 is doing your work for you!

The RF 100 is available for either large or small primers, and conversion kits are available at one low price of \$48.95 each.

Mike Dillon
1935 - 2016

It is with heavy hearts that we announce the passing of Mike Dillon. He was born on January 2, 1935 in Philadelphia,

Pennsylvania, and left us on the morning of November 7, 2016. Mike leaves behind a loving and large family including wife, Carol; sons, Stephen and Christopher; daughter, Stephanie; grandchildren, Wyatt, Ethan, Nellie, George, Travis, Sara, Jack, Michael and John; sister, Patricia; and daughter-in-law, Kimmie. Mike was preceded in death by his father, Clarence John Dillon and mother, Nell Gregory Fletcher.

Mike's legacy has touched the lives of countless people worldwide. He revolutionized the ammunition reloading industry and made it what it is today. Mike also redesigned and manufactured the M134D Minigun that is now in service in the United States and foreign military forces. As a passionate aviator, he flew for TWA as a second officer for 13 years and later made a name for himself as a writer/photographer for *Air Progress Magazine*. He is recognized by some as being the one who started the warbird restoration movement in the 1960s with his P-40 Warhawk. His forever love of flying continued with the restoration of a Temco TT-1 Pinto jet, three Beechcraft T-34A military trainers and a UH-1H Huey helicopter.

Mike's dedication to his family, his customers, and this country was exemplary. We will never forget the impact he has had on us all. We take comfort in knowing that he is flying in the blue skies of heaven above.

Donations can be made in Mike's memory to: the National Rifle Association's (www.nra.org) Handloading Education Endowment, and/or Military and Veterans' Affairs Endowment; or the Alzheimer's Association (www.alz.org).

Which Dillon is Right for YOU?

Page 8

SQUARE DEAL B

Our automatic-indexing progressive reloader designed to load moderate quantities of common handgun calibers from .32 S&W to .45 Colt. It comes to you from the factory set up to load one caliber.

Page 14

RL 550B

The most versatile reloader available, capable of loading over 160 calibers. An automatic casefeeder is available for handgun calibers. Manual indexing and an optional magnum powder bar allow you to load magnum rifle calibers.

Page 20

XL 650

Truly the state of the art, our XL 650 features automatic indexing, an optional automatic casefeeder and a separate station for an optional powder-level sensor. Available in all popular pistol and rifle calibers.

Page 30

SUPER 1050

Our highest production rate reloader includes a swager to remove the crimp from military primer pockets, and is capable of reloading all the common handgun calibers and several popular rifle calibers.

SMALL PISTOL; BIG DIFFERENCE

Ruger LCP II .380ACP

Reviewed by Peter Caroline

At the 2008 SHOT Show, Ruger introduced their new LCP (Lightweight Compact Pistol) .380 ACP, and the place went wild. I remember standing in a crowd at the Ruger booth, everybody waiting to get a close look at this new pistol. Later, I heard that Ruger sold out their entire year's projected LCP production on the first day of the Show. In the months and years following, everyone else followed Ruger's lead and got into the .380 act. Colt resumed production of the Mustang, SIG Sauer and Kimber produced Mustang look-alikes. Kahr came out with the P380, and later the lower-priced CW380. Browning introduced a scaled-down 1911-380, Magnum Research hatched a .380 Micro Desert Eagle, and Taurus even introduced a .380 ACP revolver.

In 2015, Ruger made an improved version of the LCP with better, adjustable sights, stainless steel guide rod and an improved trigger. Later, in October of 2016, I got word of a new, completely redesigned LCP, entitled logically enough, the LCP II...new look, new sights that were visible

without a magnifying glass, a new ergonomic grip design and a slide that was easier to rack and actually stayed open after the last round was fired. I requested a sample LCP II to test, and my first reaction when I opened the box was, "Who are you and what have you done with the LCP?" This did not look or feel anything like the LCP I had carried in my pocket for eight years. The next day, I took both the new and the old LCPs out to the desert and set up some targets at seven yards, a nice challenge for a gun that's primarily intended for use at card table range. And I must admit...I was impressed. On a police silhouette target, the old 3-shot drill: two in the chest, one in the head, was much quicker and easier with the new LCP II. The two chest shots averaged about two inches apart, and the head shot was more centered, thanks to a far clearer sight picture and an improved trigger. The LCP II has an in-trigger "GLOCK-like" blade safety, and is much easier to control than its predecessor. Pull weight is approximately 5-1/2 lbs., about a pound less than the LCP. There is still an internal hammer,

but you can see only about the top 1/8" of it from the rear when the pistol is cocked. The slide is very much easier to retract than that of the earlier model, which is a welcome relief for those of us without vise-grip fingers.

I fired both the LCP and LCP II with a variety of ammo: Remington 88-gr. JHP, Winchester 95-gr. FMJ, PMC 90-gr. FMJ, Federal 90-gr. Hydra-Shok JHP, Speer Lawman 95-gr. TMJ, Blazer 95-gr. TMJ and Federal 95-gr. TMJ. Neither gun had any stoppages, or failures to feed, fire or eject. What surprised me, however, was the noticeable difference in comfort. Compared to the original LCP, the LCP II was a pleasure to shoot.

Some cautionary advice: Like its predecessor, the LCP II employs a magazine with a six-round capacity. LCP six-round magazines will work in the new gun, and they look virtually identical, but they won't activate the last-round hold-open feature. LCP seven-round magazines are not compatible, period.

Another heads-up: the LCP II has a different, squarer trigger guard configuration than its predecessor. So, if you have the earlier LCP, and you want to transfer the accessory trigger guard laser sight to the new LCP II, it ain't gonna happen. I had fitted my 2008-vintage LCP with a little Laser-Lyte laser sight that screws on to the side, and that won't fit on the LCP II either. Similarly, holsters that are form-fitted to the original LCPs won't fit the LCP II. The good news is, the LCP II comes

with a very nice fabric pocket holster with a grippy exterior that will stay put when you withdraw the gun. You also get the obligatory cable lock and a spare, flat magazine floorplate.

I understand that Ruger has sold approximately 1.5 million LCPs in the past eight years. This new one is a definite improvement, and it's available for sale right now (although not approved for sale in California or Massachusetts, go figure). MSRP is \$349, but probably less in real life.

Specifications:

Capacity: 6+1

BL 550 Dillon's Basic Loader

\$274⁹⁵

N53-15399
Reloading Dies and Caliber Conversions sold separately (see the back of the order blank in the center of *The Blue Press*).

Pictured with optional accessories:
Strong Mount N53-22051 \$49.95

Dillon's RL 550B has long worn the title of "The World's Most Versatile Progressive Reloader," and stripping it down to its most basic form – Dillon's BL (Basic Loader) 550 – adds a whole new dimension of versatility for the shooter/hunter who needs to feed several rifles.

The BL 550 is essentially an RL 550B without the automatic priming and powder systems. Capable of loading over 160 calibers – just like the RL 550B – it uses any manufacturer's standard 7/8" x 14 reloading dies. It's priced comparably with other manufacturers' turret presses; yet unlike them, it's fully upgradeable to Dillon's Progressive RL 550B loader!

The interchangeable toolhead (*Page 15*) makes it quick, easy and inexpensive to change calibers. For example, if you load .30-06 for elk, .243 for deer and .22-250 for coyotes, you don't even have to change the shellplate. You simply pull two pins and swap the toolhead with your .30-06 dies to another toolhead with your .22-250 or .243 dies in less than 30 seconds! The additional toolheads are \$22.95 each, or \$20.95 each if you buy three or more – if you load for several rifles it's a no-brainer! Once you get your dies adjusted, you'll never have to re-set them.

A powder measure adapter (*bottom right photo*) is available if you want to use a manual measure that you already own. Or, if you want to weigh every powder charge you load, it's easy – you can use a powder trickler with the powder die/funnel assembly that comes with the BL 550.

XL 650 (Electronic Scale)	N53-22118	266.95

Dillon's Strong Mounts

increase your machine's "footprint" to over 10",

spreading the load over the whole bench instead of stressing the leading edge. For XL 650 owners with limited overhead clearance, the XL 650-only mount raises the machine 6" above the bench top. All mounts come with all the fasteners necessary to mount your machine and are coated with a durable black wrinkle finish.

XL650-only	N53-22052	46.95
Square Deal "B"	N53-22223	65.95

Dillon's Bullet Tray is a simple, shallow aluminum bullet tray designed and located for economy of motion. Our tray works on the Square Deal "B", RL 550B and XL 650 when equipped with the RL 550/XL 650 Strong Mount, and a separate kit is available for the RL 1050.

Bullet Tray Kit	N53-22214	\$42.95
RL 1050 Tray Kit	N53-22215	42.95

Dillon's "Belted Magnum" Powder System

features a maximum-capacity steel powder bar that can dispense more than 100 grains of extruded IMR powder. Magnum rifle cartridges can require from 70 grains to well in excess of 100 grains for a single charge. We tested this system with various extruded rifle powders and found that powder charge variations stayed within plus-or-minus three-tenths of a grain.

Magnum Powder System	N53-97126	\$149.95
----------------------	-----------	----------

Dillon's Low Powder Sensor

provides an audible and visual reminder when it's time to refill your powder reservoir. When the powder level drops to about 1,000 grains remaining in the reservoir, a buzzer will sound and a bright red LED will light. Designed to fit all Dillon powder measures. Made of clear polycarbonate, it simply replaces the die-cast metal lid supplied with the measure, and operates on two AAA batteries (included).

	N53-16306	\$41.95
--	-----------	---------

Dillon's Roller Handle

gives your reloader an entirely new "feel," reduces operator fatigue, and makes primer seating easier.

Dillon's Case Preparation Equipment

CV-2001
N53-20493
\$189.95

CV-750 N53-19455 \$145.95

CV-2001 – The Industry Standard

Dillon's CV-2001 Vibratory Case Cleaner is the largest in the industry. Its 12-1/2 quart bowl capacity will allow you to polish up to 1,300 .38/.357 or 550 .30-06 cases per hour.

Not only is our capacity greater, but our motor is larger in horsepower, internally cooled, thermally protected, and turns on precision ball bearings. This is no "hobby" machine!

The bowl and base are constructed of 7/32" thick injection molded high-strength polypropylene which is impact and abrasion resistant.

Case/Media Separators

After we sold thousands of our famous first generation FL-2000 case cleaners, customers who had purchased them began asking us to address the problem of separating the cleaned and polished brass from the cleaning media.

We knew from the beginning that the simplest method of separating would be a rotating squirrel cage, but we had to find a design we could manufacture economically. Our problem was that it had to be BIG – big enough to handle the entire load of the FL-2000 series case cleaners.

The solution was an injection molded reversible part. Simple, and it works great.

Our device is large, 10" x 14", and will hold more than 1,600 .38 Special cases. It sits on a large media collection tub that measures 18" x 22". The tub keeps the mess off the floor and bench.

It's fast – so fast it will remove media from 1500 rounds of .223 brass in a matter of seconds.

Limited Work Space?

Dillon's introducing the new CV-750 heavy duty Vibratory Case Cleaner for those with limited space. This new case cleaner uses the same motor as the CV-2001 and is every bit as tough – just more compact. To accompany the CV-750, the CM-500 does the same job as the larger CM-2000 Case/Media Separator; and, like the CV-750, handles just about half the capacity of the larger unit.

CM-2000 Case/Media Separator N53-20675 \$75.95

CM-500 Case/Media Separator N53-21045 \$47.95

Although scaled down in size, these two pieces of equipment are every bit as tough as their full-sized counterparts. We used the same materials in their construction and designed them to work just as hard – and do it in a more compact area!

Attention European Customers:

Case Cleaners are available in 220 volt!

Euro CV-2001 N53-22047 \$213.95

Euro CV-750 N53-19473 \$169.95

All Dillon CV-2001 and CV-750 Vibratory Case Cleaners have a One-Year Warranty on the electric motor.

Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to reloaded

ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!

Rapid Polish 290

8 oz. bottle. **N53-13804** **\$8.95**
Case (20 pc.) **N53-20255** **135.95**

Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the cartridge

cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

D.C.L. Dillon Case Lubricant

Super 1050/RL 1050 Short Trim Die Toolhead

N53-62219
\$224.95

For short rifle cartridges like the .300 Blackout, you must use a Short Trim Die Toolhead when using a Dillon Rapid Trim 1500 Case Trimmer during case preparation. Otherwise, the toolhead is too thick to facilitate the correct case length. This specialty toolhead enables you to correctly trim and prepare short rifle cases on your 1050. *(NOTE: the Blue 1050 toolhead stand – Part Number N53-62200, \$49.95 – is not included.)*

Dillon's New Rapid Trim 1500 Case Trimmer ²³

Dillon's RT 1500 shown installed on an XL 650.

The RT 1500 is used just like a standard size die. The big difference is that while you are pushing the case into the die to size it, an electric motor driving a carbide cutter at 4500 RPM is trimming the case to length. Chips are drawn off through a vacuum manifold that clamps to the outside of the special size/trim die. (*Vacuum cleaner and hose not included.*) The RT 1500 is equipped with a quick-

disconnect power cord; and it can be used on any standard reloader, single stage or progressive.

The RT 1500 Case Trimmer Assembly **N53-62164** is **\$329.95**. (Available only in 110 volt 60 hz.) Size/trim dies are sold separately (Please see chart below). Replacement carbide cutting blades, **N53-13141**, are **\$19.95** each. Upper lock rings, **N53-13559**, are **\$4.99** each.

MILITARY BRASS?

Eliminate the "Grunt Work" with Dillon's Super Swage 600

Until now, reusing military brass, with its crimped primer pockets, has been a tedious task. The Dillon solution is a remarkably simple device that bolts to your bench and allows you to swage the primer pockets with speed and ease. The case is supported from the inside, so you won't be tearing the rims off the brass. A tool steel, hardened swage rod (easy to change from large to small primers) simply rolls the crimp away. No reaming is necessary. Our unique compound cam leverage system assures not only ease of operation, but perfect alignment with each and every round. Sound simple? It is and it works. What's more, it's inexpensive. The Super Swage 600 comes with large and small swage rods.

Dillon's NEW Concealed Carry Tote

Dillon's NEW Concealed Carry Tote accommodates all the tools you need to survive the urban jungle. This low-profile carry case looks like an ordinary briefcase or laptop case, but it's designed for your pistol as well as your PC! It's made of rugged nylon fabric, with heavy-duty zippers on all compartments. The main compartment is 15" x 11.5" x 3" deep, with pouches in back and front. The hidden gun pocket is held closed with hook & loop fasteners for quick access,

has a 14.5" opening and is 10.5" deep. The two front pockets are 6.5" x 8" x 1.5" and feature inner pockets for flat items. There is also a zippered compartment on the back of the case sized to accommodate a ballistic armor plate.

\$79⁹⁵

"Wild Bunch" 1911 Holster/Mag Pouch

This holster/mag pouch combination was designed specifically for the Single Action Shooting Society's "Wild Bunch" category of Cowboy Action Shooting, incorporating a holster and mag pouch that look like they were made at the turn of the century, yet feature state-of-the-art speed and accuracy. The holster is hard molded so as not to lose its shape even after thousands of draws. It spaces the pistol's grip frame away from your body so you'll get a full combat grip, and the holster includes

the T-nut lock system to ensure that it stays in place during a draw.

The mag pouch spaces the magazines so when you grab one mag, the second isn't in your way; above the belt line so the belt doesn't interfere with the draw; and at the max depth required by the sport – and no more – so you'll get a full grip and the ability to index with your forefinger for a rapid mag well insert.

THE WILDERNESS TACTICAL PRODUCTS

The Wilderness' Original Instructor Belt is an incredibly strong belt with a specially designed "V" ring buckle. Imitation is the sincerest form of flattery, and the marketplace is full of copies of this belt, but none can compare to the original. This belt is a favorite with law enforcement, military personnel, fire-

fighters, paramedics, etc. Note: The 1.75" belt works best with BDUs or jeans. The 1.5" belt features a scaled-down buckle.

Dillon's Pistol Die Sets

Size Die

- Floating Decap Assembly Eliminates Primer "Draw Back"
- Long, Tapered Carbide Ring
- Radiused Opening Makes Progressive Loading Smoother

Seat Die

- Reversible Seating Stem Makes it Easy to Change Bullet Styles

Crimp Die

- Quick Disassembly, Easy to Clean

Sizing/Depriming Die

Our sizing/depriming dies feature a unique "floating decap assembly" with a snap spring that throws the spent primer off the pin and eliminates the problem of primer "draw back" that often occurs when decapping military brass. The primary feature of Dillon's size die design – the long, tapered carbide ring with a radiused opening – remains unchanged.

That radiused opening, and its importance to progressive reloading, is one of the reasons why our seat and crimp dies are better. We found a way of manufacturing these dies that has enabled us to make the lead-in radius even bigger! The bigger radius makes progressive loading with our equipment even smoother – but that's still only a part of the story.

Bullet Seating Die

Our new quick-disassembly seat die allows the user to disassemble and clean the seat die without losing adjustment. In this manner, bullet lube and shavings can be quickly removed from the die, thereby guaranteeing a constant seating depth. We've incorporated a "flip-flop" seating stem and a clip that enables you to remove the die insert and change the seating stem from round nose to semi-wadcutter without unscrewing a seating stem out of the die body. We've always included both types of seating stems, but the new double-ended design makes it a simple matter to remove a pin, reverse the seating stem, make any minor seating depth adjustments that may be necessary and go on loading in a fraction of the time it used to take.

Crimp Die

We've made it easy for you to remove the die insert for cleaning without having to change the critical crimp adjustment. Once your crimp die is set for the proper amount of crimp, you'll never have to change it. This is especially good news for all of you who load lead bullets! Before, you had to unscrew the die from the toolhead and disassemble the die in order to remove any bullet lube or lead residue. Then, you had to start from square one to re-adjust the crimp. Those days are over. All you have to do now is pop a clip and the die insert drops into your hand for cleaning.

NOTE: All Dillon Pistol Die sets include our sizer/ decap die, seat die and a separate crimp die. (Taper crimp for autos; accu-crimp for revolvers.)

---------------	-----------	--------

Dillon's Rifle Die Sets 35

Size Die

- Full-length, to minimum tolerance
- Carbide expander ball
- Features stuck case remover

Seat Die

- Designed to hold bullet straight throughout the seating process

Taper Crimp Die

- Centers case neck and body for a more uniform crimp

Dillon Three-Die Rifle Die Sets include a sizing/depriming die, a bullet seating die and a taper crimp die. Dillon Two-Die Rifle Die Sets include a sizing/depriming die and a seat/crimp die.

Sizing/Depriming Die

The sizing/depriming die is full-length, to minimum tolerances, sizing cases down to function in semi- and full-automatic firearms. We strongly suggest that a headspace case gage be used to correctly adjust the size die.

For high volume users, such as commercial reloaders, law enforcement agencies, and high power or service rifle competitors, we also offer .223 and .308 die sets with a full-length carbide sizing die. Lubrication is still required, but the increased scratch resistance and die longevity of carbide are of great benefit to these groups of users.

The depriming assembly includes a carbide expander ball for "squeak-free," effortless neck expansion. This expander ball is located in the middle of the depriming stem to take advantage of superior initial leverage for easier extraction.

In the event of a stuck case, the design of the depriming assembly allows it to function as a stuck case remover.

Bullet Seating Die

Our bullet seating die is internally designed to keep the bullet straight throughout the seating process. Once properly adjusted, the only measurable runout will be that which is inherent in the bullet.

Taper Crimp Die

The taper crimp die is also specially configured to center both the case neck and the case body, thereby aligning the entire cartridge for a more uniform crimp. Dillon Rifle Dies are designed to meet the more rigid requirements for both accuracy and precision demanded by today's marksman.

A taper crimp die is preferred for loading ammunition intended to be used in semiautomatic firearms with detachable box magazines, and in lever-action firearms with tubular magazines.

Dillon Rifle Dies (Three-Die Sets)

Using Dry Fire to Bec

“You can practice the movements of reloading with EMPTY magazines or with snap caps.”

By Randi Rogers

If you're looking to improve your shooting, almost all coaches, instructors and other shooters will suggest dry firing.

Dry fire is practicing all of the skills needed to shoot, but with no ammunition. This can be done almost anywhere, since it doesn't require a range. Most people will dry fire in their homes, garages or workshops. Whenever you engage in dry-fire practice, you need to follow all the rules of safe gun handling, and I personally like to add an additional dry-fire safety rule of dry firing in a room with no ammunition present.

While most of us understand the definition of dry fire, I regularly get the question, “What do you actually DO when dry firing?” Here are three drills I do to improve my shooting:

Drill One: Practicing Hitting the Target

When you dry fire no ammunition is used, so hitting the target probably sounds like a drill that is impossible, but you'd be surprised. When it comes to hitting the target, the bullet does most of the work, but all the skills needed to put the bullet

on the target happen the same whether you have ammunition in the gun or not. To hit the target you need to line up the sights and pull the trigger – neither action requires ammunition.

When I practice this drill, I set up an aiming point, usually a target or photo of a target. I cock the firearm, stand in my shooting stance, grip my firearm, line up the sights and pull the trigger. Then repeat over and over again until my arms are too tired to continue. Then, I take a break.

When I practice “hitting the target” in dry fire there are three main skills I'm working on to be a better shooter: grip, sight picture and trigger control.

The grip is one of the most important shooting skills. I want to make sure I'm holding firmly with both hands, squeezing the trigger and keeping the firearm still. I continually remind myself not to get lazy with my grip. You want to *grip* the gun, not just *hold* the gun.

When lining up the sights in dry fire, you have to be disciplined enough to make sure you see a perfect sight picture every trigger pull. You don't have any target feedback, so if you want

Become A Better Shooter ³⁷

your practice to be worthwhile, you're teaching your brain to see "good" sight pictures. If you just throw the gun up and pull the trigger, you won't improve your live shooting because you're just telling your brain and body to "throw the gun up and pull the trigger." This is mental practice as much as physical practice – you're learning what you need to see in order to hit the target. You need to see a good sight picture: the front post level with the rear and centered in the notch.

Dry fire is the perfect place to test trigger control, because you get to evaluate your motions before, during and after to see what you're doing without recoil interfering. When practicing this drill, the sights should stay perfectly steady before, during and after the pull. If the trigger moves during the pull you are most likely jerking/anticipating the recoil. Practice holding your arms steady and pulling gently on the trigger. If the sights move after the trigger pull, you could be jerking or you could be crushing the trigger.

"Crushing the trigger" is my term for continuing to pull the trigger after it breaks. If you continue to pull the trigger after it breaks, the trigger runs out of travel room and starts bumping into the frame of the gun. The gun then bumps into your hand and something, somewhere, has to give. This movement happens at the critical moment when the bullet is leaving the barrel and can cause inaccuracy or even missing. The sights should stay still before, during and after the trigger pull. If the gun moves after you pull the trigger, try pulling the trigger gently/slowly so that it surprises you and you stop as soon as it breaks.

Drill Two: Transitioning or Moving Between Targets

I have written about transitions and movement before in live-fire practice, but this is also a skill that can be worked on in dry fire. For this drill I like to use an electronic timer to give me a "buzz" as a starting point, but a sound is not required.

To practice this drill, set up two targets in different corners of a room so that you cannot see them both at one time. Cock your firearm, get in your shooting stance, grip the gun, and line up the sights on the first target. At the sound of the buzzer or whenever you are ready, move your eyes/head to the second target, and then move your arms/torso/hips in order to shoot the other target. **Dry-Fire Rule:** *Don't pull the trigger until you have your sights stopped and lined up on the second target.* You have to keep yourself honest about "hits" since you'll have no visual feedback as you would from firing a live round.

I practice this drill a lot and have used it to really help my 3Gun/rifle shooting. Learning to shoot through a scope was tough for me because I was always trying to search through the scope for

the next target. This drill taught me to see my next target and bring the scope into my field of vision to sight and shoot. This drill also helped me learn how to move with the weight/length of the rifle versus my pistol.

Drill Three: Loading Guns –

WITH EMPTY Magazines or SNAP CAPS

When dry firing you never want there to be live ammunition present – even as a weight in magazines. Remember, my personal rule is never even dry fire in a room with ammunition in it. You can practice the movements of reloading with EMPTY magazines or with snap caps (a device similar to ammunition but contains no primer, powder or projectile).

Many shooting sports require you to load or reload your firearm at some point. It is helpful to practice the movements of loading in dry fire because it can take some practice to make these movements small and smooth without fumbles. Practicing without ammunition will mean less money spent on ammo, less time spent at the range and less wear and tear on your body experiencing lots of recoil, especially from shotguns.

When working this drill with a handgun, I'll start in my stance with the handgun pointed at the target. I practice both with the slide down and hammer back as if I were reloading mid-shooting string, or with the slide locked back as if I were empty. Again, I like to use a buzzer as a start but it isn't necessary. At the sound of the buzzer, I'll drop the magazine from my handgun while simultaneously reaching for a new one. I bring the handgun in and turn enough to see the magwell then I place the new magazine in, extend the handgun, line up the sights and pull the trigger. I will often start practicing in slow motion and get faster as I get the movements down.

When working a reloading drill with rifle, it's the same as handgun.

When working the reloading/loading drill with the shotgun, it involves the snap caps rather than a magazine. You practice all the movements of loading and then shouldering, aiming and shooting.

These three drills can be done one by one or even added to many others. My dry-fire practice total time (with rest breaks) is anywhere between 15-30 minutes. I get suited up, I work these drills in rotation for a few seconds or minutes, taking rests as my arms need to. I like to use a timer because it gets me used to the sound and the adrenaline rush of knowing I'm under the clock. I try to keep myself honest regarding always seeing a good sight picture and managing good trigger control. Any time spent working with my firearms is helpful in improving my shooting, and I always recommend dry firing to those who want to improve their shooting.

Dillon's SL 900

Shotshell Loader

STANDARD FEATURES:

- Automatic Indexing
- Auto Powder/Priming Systems
- Adjustable Case-Activated Shot System
- Factory Adjusted to Load AA Hulls
- Factory Adjusted Loading Dies
- The Original Tilt-Out Wad Guide
- Lifetime "No-B.S." Warranty
- **RISK FREE 30-Day Trial Period!**

California Competition Works' Tandem Tactical Strippers can be used to hold either shotshells or AR-15/M4/Mini 14 magazines, or a combination of both by installing or removing the aluminum spacers provided with each stripper. The Tandem Tactical Stripper holds a maximum of eight rounds of 12 Gauge (10 rounds of 20 Gauge) shotshells or two AR-15/M4/Mini 14 magazines. Each Tandem Tactical Stripper features a BLADETECH Tek-Lok™ Universal Belt Clip, four removable aluminum spacers, and the screws and Allen wrench required to install them.

Tandem Tactical Stripper N53-00303 \$55.00

California Competition Works' Tactical Strippers are available in three, four or six-shell versions that allow quick access to your shotgun reloads. Engineered to carry up to 3" magnum* shells as well as the longer European shotshells. All CCW Tactical Strippers are equipped with either a belt clip (A. & B.) or a UM84 attachment device

(C. & D.) that will accommodate up to a 2-1/4" duty belt.

A. Six-Shell Tactical Stripper N53-18606 \$23.95

CLASSIC FIREARMS: The S

By John Marshall

At the turn of the 20th Century, particularly in that more rural time, it was rare to find a boy (or even sometimes a girl) without a rifle to use for small game, target shooting or just plinking for fun. The J. Stevens Arms and Tool Company of Chicopee, Massachusetts, then the largest manufacturer of sporting firearms in the world, made a number of rifles designed for use by youngsters.

The J. Stevens Arms and Tool Company of Chicopee, Massachusetts, then the largest manufacturer of sporting firearms in the world, made a number of rifles designed for use by youngsters. One of the most popular of these "boys' rifles" was dubbed the "Favorite," and it was manufactured in large numbers from 1885 to 1935. Ask anyone over the age of 75 if he or she recalls the Stevens Favorite .22 rifle, and I'm sure you will usually get a positive answer.

All of these single shot rifles were sometimes known as falling block types, although the factory referred to them as swinging-block actions. A serpentine combination trigger guard/underlever allowed the lowering of the breechblock to load and unload the rifle. The hammer had to be manually cocked in order to fire the chambered round. The receiver was case-hardened. The gun could be easily taken down into two assemblies by unscrewing the prominent screw in the bottom of the action and pulling the barrel and forestock straight forward out of the receiver. I have illustrated the open action with the barrel removed. This made the rifle more compact for transportation.

Buttplates were uniformly hard rubber on all standard models, while the markings on the buttplates varied. Most of the Favorites were made with no frills, and they first sold for \$6.00 each. They proved to be ideal for young people, as they were lightweight, accurate and affordable.

Identifying and dating the various Favorite models can be a bit of a challenge. Although there was usually a letter and a number stamped on the bottom receiver tang, that is an assembly number rather than a serial number. To make matters worse, those assembly numbers were applied in a random fashion (perhaps on purpose to con-

fuse competitors as to production numbers), and the relevant company records were reportedly lost in a fire. As a result, only a rough estimate of the age of any rifle can be made through other markings and parts variances.

There were four basic models made progressively through the years. The first of these was the Model 1885. It was distinguished by having a screwed-on sideplate on the right side of the receiver. It had an extractor to the left side of the barrel, sometimes called the "7 o'clock" type.

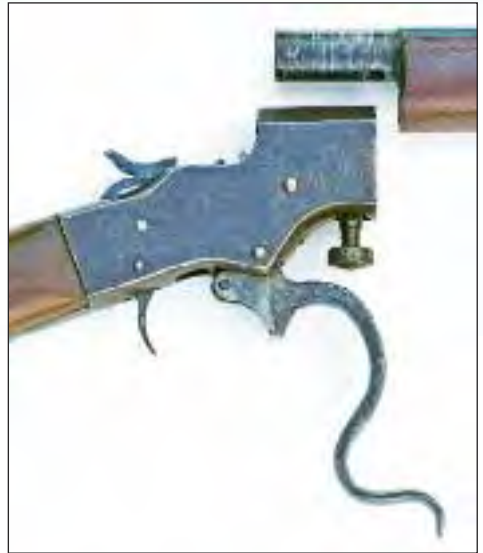

The next modification was called the Model 1889, which also had the side extractor. The flat steel mainspring for this model snapped into a lug in the cast receiver tang. Later in this series, a screw replaced the lug. The barrel top was marked "J. STEVENS A & T CO. CHICOPEE FALLS, MASS. PAT. Oct 29 89"

It was followed by the Model 1894, the most prolifically made type. Although there were several types of extractors, most of the later M1894s had extractors that operated from the bottom of the chamber at the 6 o'clock position. Over its production life, many variations were made regarding barrels, stocks, target types and ladies models. The rifle illustrated, which I estimate was made in either 1908 or 1909, is probably the most common configuration. It's in .22 Long Rifle caliber; the barrel is about 1/3 faux octagonal (the bottom is actually rounded) near the breech, and about 2/3 round from that point on. It measures 22" long and the rifle itself tapes out at 36.75". The front and rear sights are rudimentary, with no adjustment possible other than sideways drifting for windage. Some early rifles in this model had a knurled nut on the barrel to eliminate looseness due to wear. Cataloged as the No. 17 was the standard rifle in all calibers. No. 20 was smoothbore. No. 21 was the Bicycle Rifle made from 1898 to 1903. It had a carrying case. No. 23 was the ladies model with higher-grade wood, a vernier tang sight and hooked Swiss-style buttplate. There were other calibers

Stevens "Favorite" Rifles

One of the most popular of these "boys' rifles" was dubbed the "Favorite," and it was manufactured in large numbers from 1885 to 1935.

offered, including .25 Stevens rimfire and .32 rimfire. This ammo is hard to get, but occasionally it can be found imported from Italy.

The Model 1915 was the final type, easily identified because this designation is stamped on the top receiver tang. It used a coil mainspring rather than the leaf type. The extractor is spring loaded to double as an ejector. Some of this style of extractor was also available on the previous Model 1894 in later production. The Model 1915 was produced until 1935. Catalog numbers 17 and 20 duplicated those of the Model 1894. A new number 27 had a full octagonal barrel, and nos. 28 and 29 were the same with different sights. A 1923 advertisement lists the Favorite in calibers .22 Short or Long Rifle, or in .25 Stevens Rimfire or .32 Long Rimfire, for a price of \$9.85.

Due to the use of black powder in most of the cartridges used over the time span of this rifle, you will find a lot of bores that are severely corroded. Some are shootable, while others would best be served by barrel replacement or relining. It should be mentioned that the actions are relatively weak, and using modern full-power or high velocity ammo is not recommended. .22 Short or .22 Long reduced-velocity ammo will generally be safe, but be sure it has sufficient oomph to go all the way through a long barrel.

The most common questions about these rifles are "When was it made?" and "How much is it worth?" There are some identifying characteristics that you can use to get a ballpark estimate of when a particular gun was made. The first is the marking

on top of the barrel. Models 1894 will generally have the patent date "APR. 17 94". If produced after 1908 (when the patent expired), most will not have the patent date. The extractor location was changed to bottom center in 1901. A spring-loaded "automatic extractor" appeared around 1904 on the .22 caliber models. Models 1915 made after 1920 will be marked "J. STEVENS ARMS COMPANY" on the barrel. Of course, the Model 1915 was so-stamped on the upper tang, and the firing pin had a rounded, rather than a "chisel" tip. In 1920, Savage bought Stevens, and the buttplate was changed to indicate that. All Favorites had two small screws in the upper receiver tang. These cover mounting holes for vernier-type peep sights.

Currently, Stevens Favorite rifles will bring about \$150 in very good condition, with values ranging up to \$300 for those in excellent condition with nice bores. They are relatively inexpensive as collector items, but I predict that the better-condition guns will continue to escalate in price in the coming years.

I should mention that Savage has in recent years produced a reproduction Favorite rifle in a number of variations. While it externally resembles the original, few if any of the parts will interchange with the old-timers.

The original Favorites are great reminders of a time when any kid who wanted one could have a rifle – and in many cases used it productively to shoot small game for the family table. They are bits of nostalgia that are well worth having and still quite affordable.

46 Pan Sifter & Ammo Can from Berry's Manufacturing

An injection molded pan sifter that fits on top of a bucket to separate your brass from cleaning media.

Berry's Mfg. Pan Sifter

N53-17519 \$9.99

Modeled after the military .30 Caliber ammo can, this tough unit has a gasket in the lid to protect contents from moisture. It's approximately 11" long x 7" high x 4" wide at its largest dimensions and holds 550 .223 rounds or 1000 9mms. Made in the USA and comes with a lifetime warranty.

Berry's Mfg. Clear Ammo Can N53-17518 \$9.99

SAVE YOUR BRASS!

Pick up your brass the easy way! This takes the hard work out of policing up your brass. No more aching back from bending over or kneeling at the range!

N53-21894 \$44.95

The **SHELLSORTER** is a simple product designed to reduce the time you spend sorting brass, allowing you to enjoy more time reloading and shooting. The **SHELLSORTER** is comprised of three pans designed to sort several common calibers. The fastest way to sort is to stack all three of the pans together on a common five-gallon bucket, yellow pan on top and black on the bottom; in that way, with a few shakes all your brass is sorted by caliber at the same time. The **SHELLSORTER** is made of ABS, a strong plastic that will give a lifetime of service.

The Taurus Millennium G2, left & right sides.

Taurus Millennium G2

By J.B. Wood

I don't remember which manufacturer first used the "Generation 2" designation, but we've all come to know that it means the designers have further tweaked some earlier successful design, and added new features. The changes may be mechanical, dimensional, constructional materials, or all three.

Taurus has now joined the parade, with an excellent entry, the Millennium G2. Two chamberings are offered. The PT 140 is in .40 S&W, and the 9mm version is the PT 111. Since I have no affection for the "10mm Lite" (.40 S&W), I requested the 9mm version for testing. Practically equal effect, two more rounds, and lighter felt-recoil.

In size, the Millennium G2 is a "compact", with room on the front-strap of the frame for all three fingers of the average hand. For those who like to have all the numbers at the start, the overall length is 6.2 inches. Height, 5.1 inches. Width, 1.2 inches. Barrel, 3.2 inches, and in 9mm, the magazine capacity is 12 rounds.

The G2 is a true hammerless, striker-fired pistol. The materials are high-tech polymer for the grip-frame, steel for everything else, stainless for the barrel. The sight system is square-picture, with three white dots. The rear sight is screw-adjustable for both windage and elevation.

The trigger is essentially single-action, but with an interesting feature. If you encounter a hard European-type primer, it will give you a double-action pull, so you can give it another whack. I will have more comment about this, a little further on. On my pistol, the final, crisp SA pull averaged 8 pounds.

The controls are well placed, with the manual safety and the slide latch at the top of the grip on the left side. Minimal protrusion, but easy operation. The push-button magazine release is reversible. The only other nod to left-handers is a thumb-recess on both sides of the grip, and a finger-rest above the trigger-guard at the front.

The locking system is classic falling-barrel, and the dual-sleeved recoil springs make slide

The rear sight is screw-adjustable for windage and elevation. Just below it on the right side is the Taurus key-lock for storage.

The controls, slide latch and manual safety. Safety is shown in on-safe position.

The indicator on top is clearly marked, "LOADED WHEN UP".

retraction easy. For the few who may still use that odd hold, the front of the trigger guard has a moderate incurve. At the front of the frame, there's a standard rail to mount a light or a laser. The handgrip has just the right amount of stippled surface for a secure hold.

With the idea that this is primarily a personal-protection piece, I test-fired it at the range with a serious load, the CorBon DPX. Standing, two-hand hold, the distance was about seven yards. Targets were Champion VisiShot, with an 8-inch black. Firing five shots quickly, the results were interesting.

The first shot would be near center. The other four, in different areas nearby, were little two-shot groups, an inch or two apart. For defensive purposes, a more than acceptable performance. There were no feeding or ejection problems, and the felt-recoil was moderate.

For those who, like me, are uneasy about carrying "cocked-and-locked," there are several excellent safety systems. The manual safety

Takedown for cleaning is simple and easy. Five parts.

blocks the sear. Inside, there's an automatic striker-block, cancelled only in the last fraction of trigger pull. Also, the little "flipper" in the trigger, well-done and not obtrusive.

On top of the slide, an indicator rises when a round is in the chamber. For the wantonly uninformed who don't read the well-written manual, it's marked "LOADED WHEN UP." A final note to the Taurus designers, about the "second-strike" DA trigger system: How about a version that simply omits the single-action sear, making it a Double-Action-Only?

As it is, though, it's still "the perfect everyday gun," to quote from the Taurus ads. And, the MSRP's may surprise you. For the all-black version shown here, \$301. With the slide in "matte stainless," \$316. Realistically, you can probably find one in the \$250-\$275 range.

Dillon's New Bench Wrench Fits new 1" die lock rings

A characteristic of virtually all progressive reloading machines, regardless of brand, is that the dies are set rather close together. When you are first setting up a "naked" machine, there is plenty of wrench room, but if you have a need to adjust a die afterward, it often requires a delicate touch to maneuver a lock ring on a crowded toolhead.

Dillon Precision has addressed this in two ways. We now offer new 1" die lock rings and a 1" Bench Wrench to fit them. This combination gives much more room to re-adjust dies after they're already mounted. The opposite end of our new wrench is a 7/16" box-end for adjusting the Powder Bar of any Dillon Powder Measure. Our new lock rings fit any standard 7/8" x 14 dies.

Comtech's STINGER

THE STINGER:

Comtech's own personal defense device. Designed to act as a "force multiplier," it's like having the punching power of a karate master – instantly! There's really nothing like it for easy carry and access. It passes un-noticed by 90 percent of people who see it. Yup, just another "keychain device" to most, and yet it works so well when needed. You deserve a Stinger today!

N53-19495 \$9.95

Arredondo Accessories' Multi-Gun Chamber Flags

Made of super tough nylon with a melting point of 480 degrees. Kit includes one shotgun chamber flag and one for your AR-15.

N53-15485 \$11.95

ElZetta

Tactical Flashlight Mounts

Every Elzetta ZFH1500 Flashlight Mount for AR15 rifles and ZSM Tactical Shotgun Flashlight Mount comes with sizing adapters, giving the mount the ability to accommodate flashlights from 0.7 to 1.05 inches (18 to 27 mm) in diameter. This includes flashlights from popular manufacturers such as InForce®, Streamlight®, Pelican®, Laser Devices®, SureFire® and of course, the Elzetta® ZFL-M60. (Sizing Adapters are not required when using an Elzetta ZFL-M60 or other 1-inch lights.) The Elzetta ZSM is made from the same advanced glass-filled polymer that has proven itself in the popular Elzetta ZFH1500.

The NEW Elzetta ZRX Tactical Flashlight Mount is made for flashlights with standard one-inch bodies and will accommodate a range from 0.94 to 1.04 inches (23.8 to 26.4 mm). This includes many popular tactical flashlights including the Elzetta ZFL-M60. The Elzetta ZRX clamping rings are made from Mil-Spec Type III Hard Anodized aluminum, the body is a glass-reinforced polymer and the hardware is steel. The ZRX weighs 1.1oz (32g).

The 5x5 Drill

5x5 Drill

Created by Clay Hunt.

Instructions: Five shots, five inches, five yards, five seconds. Starting from a low ready position, at the beep fire five rounds at one of the circles. The goal is to land all five shots in the circle within five seconds.

Variations: For an added challenge, draw from the holster instead of low ready. To test consistency, repeat the drill five times. A "pass" is 25 shots with no misses.

LUCKY  GUNNER

The "official" 5x5 target consists of two gray 5" circles, each surrounded by a line of darker gray with a 1" red dot in the center.

There are a variety of shooting tests out there for pistoleros to pit themselves against, to measure their skill level with the defensive handgun, thus to determine whether they can deliver the combination of speed with accuracy necessary to use that gun in an emergency. One of the best of these is called the 5x5 Drill.

The 5x5 Drill has become one of the classic shooting tests. It can be shot using only one target, and requires only five yards of range and 25 rounds of ammo to complete. The 5x5 Drill is actually built upon the work of a gunwriter, Gila May-Hayes. Originally Gila came up with what she called the "5 at 5 in 5" drill. When she was testing a gun for an article, she would put up a target at five yards and then fire five rounds in five seconds, measure the resulting group size, and that was her measurement of how well that gun could be fired.

Claude Werner *aka* "The Tactical Professor" eventually came along and said, basically, "Well, okay, if we're going to do that, we should be able to keep all five rounds inside a 5" circle, and we should be able to do that five times in a row." Thus did "5 at 5 in 5" evolve into the 5x5 Drill: five rounds, five yards, five seconds, five inches, five times in a row. When all is said and done, you should have 25 bullet holes inside the 5" circle, or at least touching the surrounding line.

You can do this drill simply by drawing 5" circles, but if you go into your favorite search engine and type in "concealed carry tips three essential shooting drills" and hit Enter, what will come up is a link to a page on the Lucky Gunner website containing, among other things, a downloadable and printable 5x5 target consisting of two 5" circles, light gray surrounded by a darker gray line with a 1" red dot in the center, you can run off on a sheet of 8-1/2" x 11" typewriter paper. So you can feel ever-so-official and classy as you run this drill.

If you want, you can do the 5x5 Drill from the Low Ready. If you want to make it more interesting, you can do it from the holster. I do it from the holster, from concealment. Times for my individual reps have all started with 3s and 4s, the lowest thusfar being 3.35 seconds, the slowest a laggardly 4.98 – but at least I hit with every shot.

If you carry a gun for self-defense, do this with your daily carry holster and gun. In my case that translates into a straight drop Blade-Tech Standard Belt Holster and a lightly modified Glock 17. My ammo is my match/practice handloads, the Rainier 124-gr. RN, a bullet actually marketed as being for .38 Super since it's double plated,

over Hodgdon's Universal powder, and loaded to a power level that duplicates the recoil impulse of the Black Hills 124-gr. JHPs I carry in the gun for self-defense.

The skill level necessary to pass the 5x5 Drill is decent though I wouldn't describe it as advanced. If you can do a two-second draw and fire, and deliver shot-to-shot speeds (as we like to call them, "splits") of .50 second per, and keep your shots together while doing it, you can pass the 5x5 Drill with room to spare. Think about it, your first shot breaks at the two second mark, then you have four more shots at half a second second per, that equals another two seconds, you're looking at four seconds total. I would class this as an intermediate level drill. If you can pass the 5x5 Drill, you might not be setting the world on fire, but you definitely know out of which end of the gun the bullet comes.

The 5x5 Drill is what I think of as a "visual patience" exercise. It's not really making the five second time limit I see bite people in the butt on this drill, it's shooting faster than they can hit, thus dropping shots outside the 5" circle. My advice: get to the gun fast, get it out of the holster, get it on-target, start firing. After that, there's really nothing to be gained here by outrunning your sights. See the sights for every shot. Watch the front sight move. Aim every shot. Put them all into the 5" circle. I find that little pointy thing out there on the end of the gun comes in really handy for stuff like this. Let it help you, because it's there to do exactly that, and will if you allow it to.

Doing this one-off is not enough. Many people, if they can stand there and do a drill, time after time, and fail time after time, then finally succeed one time, will count the one success as their skill level. "I can do this." No. It's not enough to be able to "do" something. You have to be able to do it on demand, time after time. I call this "What you have in the bank." The necessity to do this drill fives times in a row to pass makes it a "What you have in the bank" measurement, instead of a "What I can do once in a blue moon when I get lucky" test.

So that's what it is. What is it not? The 5x5 Drill is not a tactical exercise. It's not a multiple targets drill. It's not a movement drill. It's not an extreme rapid fire drill. It's not a reloading the gun drill. As I approach it, this is a "Can you draw from concealment, get the gun on-target, and put bullets through your opponent's heart at close range in a reasonably short time frame, and can you do that repeatably, time after time?" drill. For that purpose, it's kind of hard to beat.

"This is a 'Can you draw from concealment, get the gun on-target, and put bullets through your opponent's heart at close range in a reasonably short time frame, and can you do that repeatably, time after time?' drill."

64 *Get your "stuff" together, then keep it that way!*

Extra Loading Data Labels, N53-10446, Package of 100, \$6.95

Try a few of Dillon's heavy-duty, lightweight plastic ammo boxes. If you're like us, you're tired of crumbling styrofoam and cardboard boxes held together with layers of tape. These boxes are perfect for range or field use.

Designed to keep out dirt, dust and rain.

Dillon AkroBins

AkroBins are perfect for reloaders who load several calibers, bullet weights, bullet shapes, etc. We've been including these bins with our machines for years, and now we're stocking them in quantity for our customers.

- The small bins (the ones we use as Square Deal "B" cartridge bins) are 4-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The RL 550B/XL650 cartridge bins are 6-3/4" long x 3-7/16" wide x 2-13/16" deep.
- The 1050 bins are 10-1/4" long x 4-3/8" wide x 4-3/4" deep.
- The double-extra-large bins we use on our SL 900 measure 13-3/4" long x 6-1/2" wide x 6-3/4" deep (all inside dimensions).

AkroBins are made of heavy-duty polypropylene with permanent, molded-in color (ours are blue). They're virtually unbreakable; unaffected by weak acids and alkalis, and are also water, rust and corrosion proof. Hang 'em, stack 'em, rack 'em and fill 'em – you just can't beat 'em! Buy several and get your "stuff" together.

Swab-its® - A Swab for Every Job!

No s#!+, there I was...in my office, cleaning my 686 SSR when the boss walks in with that "whisky-tango-foxtrot" look on his face. "Hi," I said (*thinking fast*), "I'm trying out these Bore-tips before I write the **Blue Press** copy for them. They work GREAT!"

The **Bore-tips Swabs** REALLY DO work. What you can't see under the foam is a plastic jag sized for a tight bore fit which provides for the uniform application of solvents and oils. They work with all standard 8-32 thread cleaning

- rods, and are tough and reusable.

M-PRO7

M-PRO7™ Gun Cleaner is odorless, non-toxic and biodegradable. "Safely cleans rifles, handguns, shotguns..., black powder, corrosive priming deposits and much more."

4 oz.	N53-10139	\$11.95
8 oz.	N53-10138	18.95
32 oz.	N53-11298	40.95

M-PRO7™ Copper Remover works up to four times faster than ammonia-based cleaners and is odor free.

4 oz.	N53-19370	\$11.95
-------	------------------	----------------

Sweet's Australian

7.62 Solvent easily removes powder residue and stubborn copper fouling. It's harmless to steel, a non-acid formula with five percent ammonia. If you shoot a rifle, you ought to try cleaning it with Sweet's.

N53-13128	\$12.95
------------------	----------------

Brian Enos' Far Superior Slide-Glide is a dual grease blend, with proprietary extreme pressure compounds, which boost the ability of the oils in the grease to withstand extreme pressures. It gives the grease a very stringy, tenacious character that makes it stay where you put it.

Slide-Glide Standard is in use in warm weather (F60°+), Lite is a thinner viscosity for lower temperatures (F30°+).

Slide-Glide Standard	N53-15571	\$7.95
Slide-Glide Lite	N53-15572	7.95

Micron UltraBlue protects, penetrates and lubricates all surfaces. UltraBlue is in use by the US Army Marksmanship Training Unit, the US Army Pistol and Rifle Teams and the US Marine Corps Pistol and Rifle Teams.

FrogLube is a bio-based cleaner, lubricant and preservative (CLP) product. FrogLube Solvents are designed to quickly attack surface fouling, baked-on or filmed residues and other metallic fouling such as lead and copper, while protecting firearms coatings, paints, wood and other materials from the corrosive effects of petroleum-based, flammable and toxic weapons care products.

Dewey's AR-Link Cleaning

Pin utilizes the rear take-down pin in your AR-15 style rifle to hold the upper and lower receivers open for cleaning. It fits AR-15s and AR-10s with take-down pins up to .316" in diameter. To use, 1) Depress the rear take-down pin and pull out. 2) Pivot the upper and lower receivers apart. 3) Insert the pin on the AR-Link into the upper receiver take-down pin tab. 4) Close receivers with the AR-Link inserted into the lower receiver. 5) Push the take-down pin through the channel in the AR-Link to lock the upper and lower receivers into place. 6) Clean your rifle. 7) To remove AR-Link, reverse the above steps.

SCOUT SCOPE MOUNTS FOR AK, SKS RIFLES

Sorry, the optic pictured here is NOT included with the Scout Scope Mount.

Scout Scope Mounts provide an extremely stable optics base for your AK, Saiga or SKS rifle and will not shift, vibrate loose or change point of impact as the rifle heats up. Rock solid and easy to install, the two-piece design enables the removal and replacement of your optics without losing zero.

Scout Scope Mounts easily allow for complete DISASSEMBLY of your rifle for cleaning and maintenance while retaining zero. These rifles are designed so that carbon build-up can easily be cleaned from the gas tube and piston. This is routine maintenance, necessary in order to maintain a properly functioning rifle. Other mounts for AK-and SKS-style rifles make this difficult, time consuming and then require that optics be re-zeroed.

Tactical Pistol Skills

Black Hills's 115-Grain Full Metal Jacket ran flawlessly through the author's Glock 19 for the duration of the class.

By Cameron Benz

Over the years, I'd heard many good things about Ernest Langdon. I had usually heard this from Duane Thomas. As I became acquainted with some other personalities, mostly online, such as Tamara Keel, who writes for SWAT and John Johnston of Ballistic Radio, Langdon's name kept coming up. By this point, he had landed on my short list of people to train with. Then a friend and I were talking on the phone one day and he mentioned Langdon would be in town. I immediately got in touch and signed up. Next, I called on Black Hills for some ammo, as I didn't have enough components to reload enough ammo for the class. It isn't often an instructor on my short list ventures into my region and I thought *Blue Press* readers might enjoy reading about the experience.

Background

For those not familiar with Ernest Langdon, he spent 12 years on active duty in the United States Marine Corps where he participated in operations all over the world including Panama, Cuba and the Philippines. During that time he also served as the chief instructor of Second Marine Division Scout Sniper School and the High Risk Personnel Course. He was also the Platoon Sergeant of Close Quarters Battle and Designated Marksman teams and a Scout Sniper School.

After leaving the Marine Corps and entering the private sector, he has been shooting competitively for 25 years and holds a Grand Master Class rating from the United States Practical Shooting Association. He is also one of the few Distinguished Masters in the International Defensive Pistol Association with 10 National Shooting Championship Titles and two world Speed Shooting titles. His full resume is easily double the length of what I have written so far, but I think you get the point.

Class

Day one kicked off in the classroom of a local firing range with a group introduction. Most in the room were firearms instructors from local law enforcement agencies with just four of us being private citizens, two of whom are instructors. Guns in the class were almost all Glocks with a mix of mostly 17s and a couple of 19s. The other two were 1911s in the form of one 9mm STI and a Colt .45 ACP Rail Gun.

After the introductions, Ernest shared his background and then we moved on to the class objectives, which included Langdon's take on shooting skills and instructor development.

A discussion on mindset came next. He stressed having a warrior mentality and being willing to do what it takes to win. And most importantly, NEVER GIVE UP!

With Ernest Langdon ⁷⁹

The legendary Ernest Langdon explaining our next exercise.

J.D. Williams of the King County, Washington, Sheriff's Department moving through the "cognitive processing" drill more simply called walking in lateral figure eights around barrels.

Ernest continued by explaining his theory of training and the importance of subconscious performance. He explained the training of the subconscious and how the techniques must work at the subconscious level. This is the area where unconscious competence occurs and is the goal in training in practice – we can perform efficiently without having to think about it, which frees our conscious mind to focus on the task at hand. This comes about through basic learning followed by focused learning and finishes at subconscious execution.

Ernest explained that training the subconscious must start at the first level with the basic programming to execute a technique. Then you build the neural pathways (some mistakenly call this muscle memory) through repetition. After that, you move to a point where the techniques are performed under stress (against a clock, in competition, or through force-on-force training). This is a belief I have shared for quite a while and it was great to have confirmation from someone of Ernest's stature.

After some more discussion on various types of trigger actions and how to shoot them, we moved on to the range.

Once on the range, we started with dry fire so that Ernest could evaluate our firing grips. I got used as an example to show where I had some gap in my grip and how to resolve it. We followed with some more dry-fire practice before moving on.

Next up were trigger-control drills. We started slow and gained speed. Those of us who had fallen into the pattern of pinning the trigger to the rear instead of instantly resetting were called out with yours truly being used as the example. In some circles, they refer to this as follow through. In fairness, it had suddenly dawned on me that I was doing it while we were still in the classroom. The reason it is bad, as it was explained to me, was that it wastes time and can lead to trigger jerk as we reacquire the sights, we all of a sudden release the trigger and then mash it when our brain says, "The sights are on target! Mash that trigger quick while the sights are still on it." As you can imagine, this means rounds sometimes don't go where we want them. This was an absolute piece of gold for me.

After the trigger-control practice, we moved on to draws and continued working drills the rest of the afternoon. We would work on speed for a while, then shift gears to making precision shots to

Bill Blowers of the Kent, Washington, Police Department; tap-rack.com; and primaryandsecondary.com moves through the Snake Drill.

make sure we could still deliver precision on demand. We continued with this back-and-forth method for the rest of the day.

Day two kicked off with some review of day one's drills as a warm up. After the warm up, we moved on to the FAST drill. FAST is an acronym for Fundamentals Accuracy and Speed Test. For those not familiar, the FAST drill was a creation of the late Todd Green. In essence, it is an IDPA silhouette with a 3x5 horizontal box in the head. On the buzzer, you draw and put two shots into the 3x5 box on the head, reload, and fire four more to the eight-inch circle in the chest of the target. If you are using an open-top holster, you have to do it from concealment and have 4.5 seconds. If you're running it from a retention holster, you have 5 seconds and are not required to do it from concealment. In order to win the coveted coin, you have to do it twice. Now, to put this in perspective, to date, there have only been 15 coins given out. Times under seven seconds score a hatpin. Had I not thrown a shot on my first run, I'd have had the chance to make my second run. Alas, it was not to be. Out of a class of 12 people, five of them – all law enforcement – scored hatpins. It was an impressive showing.

Next up, Ernest gave us a look at his methodology for a tactical reload with the intent of only showing us, figuring we wouldn't have much interest in actually trying it. He noticed we showed more interest than he anticipated and so it was

back up to the firing line for us to practice tactical reloads. It was pretty much unanimous that it was a new favorite method.

Shooting on the move was next on the agenda. Ernest made it clear he wanted us to move at a reasonable pace rather than snail's pace. Some of us seemed to be in a competition that, in my words, could be best described as being as close to moving backwards as possible while still making forward progress. One problem for some was that they were drawing before moving rather than moving before drawing. The reason the movement is important is because any time you're not moving and a threat is, that's time they're closing the gap with you. Movement helps to buy time, so to speak.

The movement drills gave way to cognitive-processing drills, or "shooting while walking around junk," as I like to think of it. This was interesting as some of us found ourselves bumping into the barrels as we were running the drill. We started with shooting while walking in figure-eight patterns around barrels. Figure eights gave way to "Snake Drills" to replicate moving around people to engage targets.

After the initial movement drills, we moved on to single-hand manipulations of draws and reloads, both primary side and support side. It was a refreshing change, as I hadn't done this in years. Clearly I need to practice this more. I also discovered that one of my magazines – which normally

works just fine – didn't lock the slide back when attempting to lock a slide open when I manipulated the slide by hooking my rear sight on my belt. Thankfully this was a magazine that I only use for range practice due to it being a 10 rounder.

With one-hand manipulations out of the way, the Snake Drill was up next. The idea here was to simulate moving around people. Some chose to run this as they would in a match and keeping the muzzle horizontal and pointed downrange, some chose to drop their muzzles down into something resembling position SUL, and some of us chose a use an elevated muzzle position (muzzle up at about a 45 degree angle) as we navigated around the obstructions. All worked for the purposes of what we were doing.

Our last drill, Langdon's Nine-Shot Close Speed drill, involved a very close range engagement of three silhouettes that touch each other. At about three yards, from the holster to the A zone, one shot each of targets one, two and three followed immediately by reversing the order, then immediately followed up with head shots to targets one, two and three. This is run as fast as possible with a clean run. The only way to get a Langdon hat is by winning one of the drills. On this particular drill, the winner was J.D. Williams of King County Sheriff's Department with a run of 3.34 seconds. On a second run, just for fun, he pulled off a 3.17-second run. Keep in mind he

was running this from a retention holster. It was a truly impressive performance.

Conclusion

All in all, the class was excellent. I went in knowing that Ernest could make some tweaks to my technique to help me improve as a shooter and I was not disappointed. Between adjusting my grip and making me aware of my reset issue, I have plenty to work on while I put in my reps towards becoming a better shooter. This was also the highest concentration of skill I have personally witnessed in a class. It was truly an honor to learn and shoot with them.

I'd be remiss if I didn't give thanks to Black Hills for providing ammunition that performed flawlessly throughout the class. Some of the other students weren't so lucky despite using ammo from a big-name brand. I also want to thank Ernest Langdon for taking the time to venture into the damp climate of the Pacific Northwest to share his knowledge. Lastly, Bill Blowers (of Kent, Washington, PD; tap-rack.com; and primaryandsecondary.com) deserves recognition for making all of this possible by arranging the hosting of the class, not to mention being a pretty good shooter in his own right. If you need your skills tuned up or are looking to take them to the next level, get in touch with Langdon Tactical. Ernest can help.

101 Classic Firearms by John Marshall ⁸³

Dillon Precision announces the release of John Marshall's new book **101 Classic Firearms: A Chronological Foray into the Golden Years of Firearms Development**, a compilation of the author's popular articles appearing in **The Blue Press** since 2007. **101 Classic Firearms** is sure to be a welcome and prized addition to the library of any serious firearms aficionado.

Published by Dillon Precision, and printed and bound in the USA, **101 Classic Firearms** is a high-quality full color 11.5" x 9" hardcover with 224 pages packed full of insights and history on

some of the world's most important firearms. About the Author: John Marshall is an accomplished photographer and freelance

writer whose articles have appeared in **The Blue Press**, **Gun Digest**, **Guns & Ammo's Handguns**, and **American Gunsmith**. An expert on firearms, he is also a member of the Remington Society of America, the Smith & Wesson Collectors Association, the Smith & Wesson Historical Foundation and the American Gunsmithing Association. He is also an endowment member of the National Rifle Association.

Price: N53-40133 \$29.95, Autographed N53-97130 \$34.95

Competition Reloading with Brian Enos guides you through a complete step-by-step reloading process for IPSC, Steel Challenge and NRA Bianchi Cup style shooting.

Using a Dillon Precision XL 650 reloader with CP brass and CP bullets, Enos demonstrates proper reloading techniques for the most popular loads used by the top shooters. Enos is, of course, a champion himself, winner of the Masters Competition, the NRA Bianchi Cup and a top contender in the USPSA for many years. Run time: 80 minutes.

N53-14341 \$19.95

Making Ammo: A Beginners Guide to Hand-loading by Kyle Lynch – Ammo shortage? Not anymore! Learn a new hobby that will save you money and ensure that you always have enough of the right ammunition for your shooting needs. This guide offers you an opportunity for first hand information from an experienced reloader as he takes you through the reloading process. Examples explain what works and what doesn't. If you are new to reloading or want to understand the fundamentals more fully, this guide provides simple step-by-step instructions.

N53-43270 \$23.95

Legally Armed: A Concealed Carry Gun Law Guide – Learn the basics of concealed carry and the laws associated with this astronomically growing group of self-reliant Americans. If you depend on a handgun for the protection of yourself or your family, arm yourself with knowledge, too. What's inside? What to consider before carrying a firearm • Protecting oneself: discharging a firearm in self-defense • What to do when interacting with Law Enforcement • Gun handling, practice and storage • State-by-state quick reference guide to carry laws where you live and travel.

N53-43269 \$14.95

Armed & Smart: A Beginner's Guide to Concealed Carry – If you are new to concealed carry and need a great resource for information, this is the book for you. This book covers all the basics a beginner needs to know.

Before you make the decision to exercise your Second Amendment right to bear arms through concealed carry, you should consider factors like what type of gun is best for carry, when to carry a firearm, how to carry concealed, and why you should carry a concealed firearm.

We carefully cover handgun safety and the proper steps for using and caring for your firearm. Other topics include cartridge selection, accessories available, practice techniques, and range etiquette. **N53-43232 \$16.95**

Armed & Smarter: Advanced Concealed Carry Weapons & Training – Once you have mastered the basics for carrying your concealed firearm, you need a book to build on that foundation and hone your skills to those of an intermediate-level handgunner. After obtaining your concealed carry permit and securing a firm grasp of the responsibilities attendant to carrying a concealed firearm, it's time to focus on becoming an excellent marksman.

In **Armed & Smarter**, our authors prepare you, the shooter and gun owner, to handle and use your handgun responsibly. By the end of this book, you will understand the importance of strong habits and perfect practice. **N53-43233 \$16.95**

Wise Company's "Grab & Go" Emergency Food Kits
