

## Rapid Polish 290

SHINE? You bet your brass! Dillon Precision has developed another exciting new product to make your reloading faster and easier. Rapid Polish 290 is the first cartridge case finish designed specifically to bring a brilliant shine (20 percent brighter than tumbling media alone) and a protective coating to

reloaded ammunition. Simply add several capfuls to the media in your tumbler and run. Rapid Polish 290 has a great residual value and stays in your tumbling media. You'll use less each time you clean your cases.

*Rapid Polish 290 contains no ammonia, so it won't weaken brass cases!*

*Rapid Polish 290*

8 oz. bottle.	<b>D93-13804</b>	<b>\$8.95</b>
Case (20 pc.)	<b>D93-20255</b>	<b>135.95</b>

## Dillon Case Lube

Rapid Lube 5000, Dillon's aerosol cartridge case lubricant, has been replaced by an "environmentally correct," non-aerosol case lube. It works the same: Simply lay your cases out, spray lightly with one or two passes and you've done it. No mess, no guesswork. Within minutes the lubricant distributes itself around the

cartridge cases and you're ready to load. Try a bottle. You'll never use a grease pad again.

*D.C.L. Dillon Case Lubricant*

8 oz. bottle	<b>D93-13733</b>	<b>\$8.95</b>
Case (20 pc.)	<b>D93-20256</b>	<b>135.95</b>

<i>Half and Half</i>	10 bottles of polish/10 of lube	
Case (20 pc.)	<b>D93-21375</b>	<b>\$135.95</b>

## Don't Forget Polishing Media!

Crushed walnut hull polishing media – quickly cleans even the dirtiest of cases.

15-pound bag **D93-13287** **\$18.95**

Ground corn cob polishing media – the best there is for that final polish.

10-pound bag **D93-13496** **\$10.95**

## Little Red Dot **Continued From Page 10**

they would tilt their heads forward to see the target. If they focused on the front sight only, the image of the target would "gray out." All three showed dramatic improvement when handed a laser-equipped handgun. How is YOUR vision?

The single focal plane that a little red dot on target provides not only assists with depth-of-field problems, but also enhances your field of view. Try this: the next time you're at the range put a life-size torso target up at about five yards. Using your standard shooting stance, grip your handgun with two hands and line up your sights in the upper part of the torso. With a vivid sight picture, can you see the bad guy's hands near his waistline? Can you maintain an accurate index of your firearm on that target while you scan your periphery for other assailants? With a laser sight you can.

This same phenomenon also works to your advantage when you are down, shooting weak handed or in an awkward firing position. Last December while at the range I discovered that I had injured my right hand. That evening I was doing drills involving shooting multiple targets while moving in low light. After about 200 rounds my right hand hurt so bad that I had to switch to shooting weak handed with two hands. Even with this switch the pain in my right hand got so bad, I could only shoot with my weak hand. You talk

about an eye opener! I don't think I had ever shot "weak hand only" while moving in low light. I didn't shoot very well, but with the laser I was at least able to keep the shots in the torso. After I finished that box of ammo, I went home thinking of all of the times I've seen people who have temporarily lost the use of their primary shooting hand from a work- or sports-related injury.

Lethal threat management is also enhanced by the laser sight. A few months ago in the store, a police officer told me of a call he had recently been on. Two officers had their AR-15s drawn on an emotionally disturbed person with a sword, and were issuing commands when the third officer arrived. He dismounted from his patrol car, drew his laser-equipped Taser. When the officer put the little red dot on the perpetrator's chest, he "dropped like a sack of potatoes." None of those officers had to go on administrative leave, or be involved in an inquest about an officer-involved shooting.

Properly used, Crimson Trace Lasergrrips can help you correct bad trigger control. Whether you are a strong shooter, injured or visually impaired, it's easier to put more shots on target quicker and with greater accuracy with a laser sight. Batteries still leave me a little cold, but the past three years have taught me that when I see that little red dot on the target, I can trust it.
